

1z0-1042-24 Exam Learning & Interactive 1z0-1042-24 Practice Exam

BONUS!!! Download part of ExamsTorrent 1z0-1042-24 dumps for free: <https://drive.google.com/open?id=12IWhrHBwbD6gygPN-xWkxS4gkadFHKV9>

We should keep the better attitude in the face of difficulties. Although Oracle 1z0-1042-24 Exam is difficult, you should also keep the heart good. ExamsTorrent Oracle 1z0-1042-24 test questions and test answers can help you to put through this test. The passing rate is 100%. If you fail, FULL REFUND is allowed. After you purchase our product, we offer free update service for one year. Easy and convenient way to buy: Just two steps to complete your purchase. We will send the product to your mailbox, you only need to download e-mail attachments to get your products.

In today's society, our pressure grows as the industry recovers and competition for the best talents increases. By this way the 1z0-1042-24 exam is playing an increasingly important role to assess candidates. Considered many of our customers are too busy to study, the 1z0-1042-24 real study dumps designed by our company were according to the real exam content, which would help you cope with the 1z0-1042-24 Exam with great ease. With about ten years' research and development we still keep updating our 1z0-1042-24 prep guide, in order to grasp knowledge points in accordance with the exam, thus your study process would targeted and efficient.

Interactive Oracle 1z0-1042-24 Practice Exam, 1z0-1042-24 Exam Tips

1z0-1042-24 certification is more and more important for this area, but the exam is not easy for many candidates. Our 1z0-1042-24 practice materials make it easier to prepare exam with a variety of high quality functions. Their quality function is observably clear once you download them. We have three kinds of 1z0-1042-24 practice materials moderately priced for your reference. All these three types of 1z0-1042-24 practice materials win great support around the world and all popular according to their availability of goods, prices and other term you can think of. Just come and buy them!

Oracle Cloud Infrastructure 2024 Application Integration Professional Sample Questions (Q66-Q71):

NEW QUESTION # 66

Which statement about Oracle Integration Cloud (OIC) is NOT valid?

- A. Using the connectivity agent, you can create hybrid integrations and exchange messages between applications in private or on-premises networks and OIC.
- B. OIC lookups are based on a static definition, meaning you create and populate them during design time, and cannot be changed by runtime activities.
- C. An application-driven integration can contain one or more trigger (source) connections for requests sent to OIC and one or more invoke (target) connections for requests sent from OIC.
- D. When you open the mapper for a request or response message in an integration, the data structures are automatically populated with the information pulled from the source and target connections.

Answer: C

Explanation:

Comprehensive and Detailed Explanation:

OIC fundamentals:

- * Option A: True-lookups are static, design-time artifacts.
 - * Option B: True-connectivity agents enable hybrid integrations.
 - * Option D: True-the mapper auto-populates from connection schemas.
 - * Option C: False-application-driven (app-driven) integrations typically have one trigger connection; multiple triggers require separate integrations or event patterns, making this invalid.
- C misrepresents OIC's app-driven pattern.

NEW QUESTION # 67

Which Oracle Integration (OIC) adapter can be used to create a configured connection within an integration allowing you to send a file to the embedded File Server associated within the same OIC environment?

- **A. File Adapter**
- B. FTP Adapter
- C. REST Adapter
- D. Local Adapter

Answer: A

Explanation:

Comprehensive and Detailed Explanation:

The OIC File Server is an embedded SFTP server for file operations within the same instance. Let's analyze each adapter:

* Option A: File Adapter

* Correct (Answer): The File Adapter is explicitly designed to interact with the OIC File Server. In an integration flow, you configure a File Adapter connection with the "Invoke" role, selecting the File Server as the target. For example, you could use a "Write File" operation to send a CSV file (e.g., sales_data.csv) to a folder like /uploads on the File Server. This adapter leverages SFTP under the hood, making it the native choice for internal file transfers within OIC, offering seamless integration without external dependencies.

* Option B: Local Adapter

* Incorrect: There's no "Local Adapter" in OIC's standard adapter suite. This might be a misnomer or confusion with other concepts (e.g., local invokes in orchestration), but no such adapter exists for File Server interaction.

* Option C: FTP Adapter

* Incorrect: The FTP Adapter connects to external FTP/SFTP servers, not the embedded OIC File Server. While it supports similar operations (e.g., write, read), its configuration requires external server details (host, port, credentials), making it unsuitable for the internal File Server, which is pre-configured within OIC.

* Option D: REST Adapter

* Incorrect: The REST Adapter handles HTTP-based APIs, not file transfers to the File Server.

While you could theoretically use REST to manage File Server metadata via management APIs (with ServiceAdministrator role), it's not designed for direct file operations like sending a file, which is the question's focus.

Why A is the answer: The File Adapter is purpose-built for the OIC File Server, providing a direct, efficient, and supported method for internal file operations.

Edge Case: If the File Server is disabled (default state in new instances), you'd need to enable it first in Settings before the File Adapter can connect.

Use Case Example: An integration processes a payroll report and uses the File Adapter to write it to the File Server for audit purposes.

Potential Pitfall: Misconfiguring the File Adapter with external SFTP settings instead of selecting "File Server" would fail, as it's an internal target.

NEW QUESTION # 68

The Oracle Integration Cloud (OIC) integration designer editor provides a data mapper UI tool that is available for Map actions. Which statements are TRUE regarding the use of the Mapper tool? Select TWO.

- **A. You can drag and drop a source data element to multiple target node elements.**
- B. You cannot drag and drop a source data element to a target node element that is already mapped.
- **C. You cannot drag and drop an XSLT flow control statement directly to a target node element.**

- D. You cannot drag and drop an XPath function activity directly to a target node element.

Answer: A,C

Explanation:

Comprehensive and Detailed Explanation:

OIC's Data Mapper simplifies transformations. Let's evaluate each option:

- * Option A: You cannot drag and drop an XSLT flow control statement directly to a target node element.
- * True: XSLT flow controls (e.g., <xsl:for-each>) require manual coding in an external editor for advanced mappings. OIC's UI doesn't support dragging these directly; you must export the map, edit the XSLT, and reimport it. This limitation ensures simplicity in the UI while allowing power users flexibility.
- * Option B: You can drag and drop a source data element to multiple target node elements.
- * True: The mapper allows one-to-many mappings. For example, dragging "CustomerName" from the source to both "BillingName" and "ShippingName" in the target is supported, streamlining repetitive mappings.
- * Option C: You cannot drag and drop a source data element to a target node element that is already mapped.
- * False: You can overwrite an existing mapping by dragging a new source element to a mapped target, replacing the prior link. This flexibility aids iterative design.
- * Option D: You cannot drag and drop an XPath function activity directly to a target node element.
- * False: XPath functions (e.g., concat()) can be dragged from the function palette to a target node, applying transformations directly. This enhances usability.

Why A and B: A reflects a UI constraint, and B showcases mapping flexibility, both accurate per OIC's mapper design.

Use Case Example: Mapping "OrderDate" to multiple date Hawkins in a CRM sync, then using current-date() in the mapper, demonstrates B and D's capabilities.

NEW QUESTION # 69

Which adapter is NOT provided in the Oracle Cloud Adapter Pack bundled with the Oracle SOA Cloud service?

- A. Oracle E-Business Suite Adapter
- B. SuccessFactors Adapter
- C. Salesforce Adapter
- D. Oracle ERP Cloud Adapter

Answer: A

Explanation:

The Oracle E-Business Suite Adapter is not part of the Oracle Cloud Adapter Pack, as it's typically used for on-premises integrations rather than cloud-based services. The other adapters are cloud-focused and bundled with the SOA Cloud service.

NEW QUESTION # 70

You can group one or more Oracle Integration Cloud (OIC) integrations into a single structure called a package. Which statement is not true about OIC packages?

- A. Packages cannot be locked to deny other users access to your integrations.
- B. All packages must include at least one integration.
- C. You can import packages directly from the Oracle Marketplace.
- D. New packages can be created by clicking the Create button on the packages page in the OIC console.
- E. Integrations do not need to be part of a package.
- F. Packages enable you to easily import and export a group of integrations to and from OIC.

Answer: A

Explanation:

Comprehensive and Detailed Explanation:

OIC packages are logical containers for grouping related integrations, facilitating management, export/import, and deployment. Let's dissect each option with in-depth analysis:

- * Option A: All packages must include at least one integration.
- * True: A package in OIC is meaningless without integrations. When you create a package, it's a prerequisite to associate at least one integration with it, either during creation or afterward. For example, if you're building a payroll processing suite, the package would include integrations for employee data sync, payment processing, etc. An empty package serves no purpose and isn't allowed.

in practice.

* Option B: You can import packages directly from the Oracle Marketplace.

* True: The Oracle Marketplace offers prebuilt integration packages (e.g., for connecting Oracle ERP to third-party apps). These can be imported into your OIC instance, saving development time. For instance, a Salesforce-to-Oracle HCM package could be downloaded and customized.

This aligns with OIC's ecosystem approach to accelerate adoption.

* Option C: Packages cannot be locked to deny other users access to your integrations.

* False (Not True): Packages can be locked in OIC to restrict editing or access by other users, enhancing security and version control. Locking prevents unintended modifications, especially in collaborative environments. For example, a production-ready payroll package might be locked to ensure stability. The ability to lock is a feature in the OIC console under package management, making this statement incorrect and thus the answer.

* Option D: New packages can be created by clicking the Create button on the packages page in the OIC console.

* True: In the OIC console, navigating to the Packages page reveals a "Create" button. Clicking it initiates the package creation process, where you define a name, identifier, and optionally add integrations. This user-friendly interface simplifies grouping—for example, creating a

"CustomerSyncPackage" for CRM integrations.

* Option E: Integrations do not need to be part of a package.

* True: Integrations can exist independently in OIC without being packaged. This flexibility suits standalone workflows, like a one-off file transfer integration, versus grouped processes like an end-to-end order management suite.

* Option F: Packages enable you to easily import and export a group of integrations to and from OIC.

* True: Packages streamline migration by exporting multiple integrations as a single PAR (Package Archive) file. For instance, exporting a package with five HR integrations to another OIC instance ensures consistency and reduces manual effort compared to exporting individual IAR files.

Why C is the answer: The ability to lock packages contradicts option C, making it the only untrue statement.

Locking is a critical feature for governance, especially in enterprise settings where multiple developers work concurrently.

Use Case Example: Imagine a team deploying a locked "OrderProcessingPackage" to production—locking prevents accidental changes, ensuring reliability.

NEW QUESTION # 71

.....

Our 1z0-1042-24 practice braindumps not only apply to students, but also apply to office workers; not only apply to veterans in the workplace, but also apply to newly recruited newcomers. And our 1z0-1042-24 study materials use a very simple and understandable language, to ensure that all people can learn and understand. Besides, our 1z0-1042-24 Real Exam also allows you to avoid the boring of textbook reading, but let you master all the important knowledge in the process of doing exercises.
