Oracle Cloud Infrastructure 2024 Application Integration Professional Sample Questions (Q59-Q64):

NEW QUESTION # 59

Once they have been configured, which actions are allowed to be repositioned to another location within the design canvas of an orchestration-style integration flow? Select THREE.

- A. JavaScript Call Action
- B. Stage File Action using a Write File operation
- C. Stage File Action using a Read File operation
- D. Stage File Action using a Read File in Segments operation
- E. Switch Action
- F. For Each Loop Action

Answer: A,B,C

Explanation:

Comprehensive and Detailed Explanation:

In OIC's orchestration-style flows, certain actions can be moved on the canvas post-configuration:

* Stage File Action - Write File (B): This operation (writing to a staged file) is movable as it's a standalone action.

* JavaScript Call Action (D): Invoking custom JavaScript is flexible and repositionable.

* Stage File Action - Read File (F): Reading an entire file is a movable, independent operation.

However:

* Stage File Action - Read File in Segments (A): This operation involves iterative processing (e.g., scopes for segments), restricting its mobility due to dependencies.

* Switch Action (C): As a conditional branching structure, it's less flexible once branches are defined.

* For Each Loop Action (E): Its iterative nature ties it to specific data structures, limiting repositioning.

This reflects OIC's design constraints for complex, dependent actions.

NEW QUESTION # 60

There are use cases in which you need to perform an advanced XSLT task that you cannot perform in the Oracle Integration Cloud (OIC) data mapper. To perform the advanced mapping tasks, you decide to use an external XSLT mapper and then import the .xsl file back to your integration.

Which is NOT a valid consideration when handling this use case?

- A. The exported archive must be imported into an Oracle Service Bus project in JDeveloper.
- B. Once the advanced mapping is complete, you must import the entire integration that contains the updated .xsl files.
- C. You must export the entire integration that contains one or more .xsl files.
- D. The exported archive file can include a map file that is largely complete in content or a map file that is empty of content.

Answer: A

Explanation:

There is no need to import the archive into an Oracle Service Bus project. The focus is on modifying the XSLT mapping in OIC.

NEW QUESTION # 61

Oracle Integration (OIC) provides the File Server feature, which is an embedded SFTP server that enables organizations to focus on building integrations without the need to host and maintain a separate SFTP server.

Which statement is NOT valid concerning the OIC File Server feature?

- A. Access to the OIC File Server Management REST APIs is limited to users that have been granted the ServiceAdministrator role.
- B. To write files to the OIC File Server from an internal OIC integration flow, a File Server action must be used.
- C. Any external SFTP client can access File Server if an OIC administrator has configured specific folder access permissions for that client.
- D. The OIC File Server is disabled by default in a newly provisioned OIC instance.

Answer: B

Explanation:

Comprehensive and Detailed Explanation:

File Server:

* B: False-File Adapter, not "File Server action," is used.

NEW QUESTION # 62

Which three statements are true about SOAP and the advantages it provides?

- A. It provides flexibility for message format, allowing for loose coupling between client and server.
- B. It leverages XML-based payloads to communicate between two client machines across any modern network.
- C. It is platform and programming language independent.
- D. SOAP clients can easily hold stateful references to remote server-side SOAP objects.
- E. As compared to RPC (Remote Procedure Calls), which are sometimes blocked by firewalls and proxy servers, SOAP over HTTP can overcome that limitation.

- F. It commonly serves as a cleaning agent to remove excess data from the transmission protocol.

Answer: B,C,E

Explanation:

SOAP over HTTP helps bypass firewalls and proxies, uses XML-based messaging for platform independence, and is designed for interoperability between systems. SOAP does not clean excess data (C) and is typically stateless (F).

NEW QUESTION # 63

Your design of an asynchronous OIC integration flow includes the requirement for additional processing logic that is conditionally based on the results returned to the integration instance from earlier external service invocations. You decide to leverage the Switch action to facilitate this implementation.

Which is a valid consideration concerning the configuration and capabilities of the Switch action?

- A. Any data objects returned within a branch of a Switch action will only be visible within the implicit scope of that branch and not visible in the main flow of the integration outside of the Switch action.
- B. You may need to create conditional expressions for each branch with greater complexity because nested Switch actions are not supported.
- C. All branches within the Switch action must have a conditional expression defined.
- D. XPath version 2.0 functions can be used to create more complex conditional expressions for a branch.

Answer: D

Explanation:

XPath version 2.0 functions can be used within the Switch action to create complex conditional expressions for branch evaluation in OIC.
