Oracle Cloud Infrastructure 2025 Application Integration Professional Sample Questions (Q12-Q17):

NEW QUESTION # 12

A company has been using Oracle Integration Cloud (OIC) to integrate its business applications, such as Oracle HCM Cloud, Oracle ERP Cloud, and Salesforce. However, they are planning to migrate some of their integration workloads from their current OIC instance to a new instance in a different region to comply with data sovereignty regulations. Which statement is true regarding the exporting and importing of integrations?

- A. To change an integration identifier or version, you can manually edit the exported integration (IAR) file before importing it into another instance.
- B. You can import a package containing activated integrations.
- **C. You cannot import an integration if it already exists with the same identifier and version.**
- D. You can export an integration either as a separate file (IAR) or bundled in a package (PAR) and it will still contain the connection resources.

Answer: C

Explanation:

Comprehensive and Detailed Explanation:

Migration involves exporting and importing:

Option A:False-manually editing IAR files is not supported; identifiers and versions are managed within OIC.

Option B:True-OIC prevents importing an integration if an identical identifier and version exist in the target instance to avoid conflicts.

Option C:Partially true-IAR or PAR files include connection metadata, but not sensitive data (e.g., credentials), and "still contain" is vague; B is clearer.

Option D:False-imported integrations (even in packages) are inactive by default and require activation post-import.

B ensures uniqueness and integrity during migration.
