Spread curves let you distribute quantity, cost, and revenue amounts automatically across accounting or project accounting periods. You assign a spread curve to each resource class. Planning resources (in the planning resource breakdown structure) inherit the spread curve setting from the associated resource class.

You can change the spread curve for the planning resource and for any corresponding task assignments, or budget or forecast lines.

NEW QUESTION # 26

You are now the project manager of a newly created implementation project. Which two items are not part of managing an implementation project?

- A. Generate a list of setup tasks.
- B. Assign tasks to various users who are responsible for managing setup data.
- C. Select the offering you want to implement.
- D. Enable optional functional areas and features by opting in.
- E. Monitor the progress of completing setup tasks.

Answer: C,D

Explanation:

Selecting the offering you want to implement and enabling optional functional areas and features by opting in are not part of managing an implementation project. These are part of configuring an implementation project, which is done before managing an implementation project. Configuring an implementation project allows you to define the scope and features of your implementation based on your business needs. Managing an implementation project involves assigning tasks to various users who are responsible for managing setup data, monitoring the progress of completing setup tasks, and generating a list of setup tasks. These are part of executing an implementation project, which is done after configuring an implementation project. Executing an implementation project allows you to perform the setup tasks and validate the setup data for your implementation. NEW QUESTION # 28

You are managing a project based on a Waterfall model. You define a project and a project plan in Oracle Project Portfolio Management with tasks and subtasks applicable to each of the phases of the project:

Initiation, Discovery, Design, Build, Test, and Deploy. As a project manager, you want to define deliverables for your project requirements that are elucidated during the Discovery phase of your project. You now want to understand how the inheritance between requirements, tasks, and deliverables works. Identify the two correct statements in this respect. (Choose two.)

- A. A deliverable associated with a requirement is automatically associated with the tasks created for that requirement.
- B. The association of a deliverable with a task is dependent on associating a requirement with a task.
- C. You associate a deliverable with a task, independent of associating a requirement with a task.
- D. A deliverable associated with a requirement is not automatically associated with the tasks created for that requirement.

Answer: C,D

Explanation:

Ref: https://docs.oracle.com/en/cloud/saas/project-portfolio-management/19b/oapem/define-project-deliverables.html#OAPEM1122079 Associate deliverables with one or many tasks or requirements at any level. Associate existing deliverables to tasks or requirements or create deliverables directly for tasks or requirements. You can delete a deliverable in New status if it is not associated with tasks or requirements.

Can deliverables for projects and tasks be inherited from associated requirements?

No. A deliverable associated with a requirement is not automatically associated with the tasks created for that requirement.

You associate a deliverable with a task, independent of associating a requirement with a task.
