

1Z0-1067-25 Exam Review & Trustworthy 1Z0-1067-25 Exam Torrent

Optimizing OCI with Observability A Study Guide for Oracle 1Z0 1067 25 Exam

The Oracle Cloud Infrastructure 2025 Cloud Ops Professional 1Z0-1067-25 exam is aimed at professionals who are responsible for managing and operating cloud environments on Oracle Cloud Infrastructure (OCI). This certification is intended for those working in cloud operations, covering a wide range of topics essential for maintaining cloud services. The exam evaluates your ability to handle the setup, management, and troubleshooting of OCI services, with a strong emphasis on key areas like networking, security, and resource management. A major focus of the exam is Implementing Observability, which involves using tools to monitor and analyze the performance and health of cloud systems. Implementing observability is critical for detecting problems proactively, diagnosing issues, and ensuring that systems run smoothly and efficiently. Key concepts in observability include collecting and analyzing logs, metrics, and traces to maintain a high level of system performance and availability, which are vital to successful cloud operations.

Effective Preparation for the Exam

For effective exam preparation, using reliable study materials is key. Practice exams with [Oracle 1Z0 1067 25 actual exam questions](#) closely match the format and difficulty of the real exam, helping you familiarize yourself with the types of questions you'll face. These practice questions come with detailed explanations, allowing you to deepen your understanding of the core topics. To enhance your readiness, focus on mastering important areas like OCI networking, security configurations, and troubleshooting techniques. Additionally, hands-on experience with OCI services and observability tools will be invaluable. Regular practice with actual exam questions will help improve your problem-solving abilities, boost your test-taking speed, and ensure you're fully prepared for the Oracle 1Z0 1067 25 exam.

Some Sample Questions are given:-

1. Which OCI service allows you to monitor and manage logs from various sources, facilitating centralized log analysis for troubleshooting and performance optimization?

- A) Oracle Cloud Infrastructure Logging
- B) Oracle Cloud Infrastructure Monitoring
- C) Oracle Cloud Infrastructure Events
- D) Oracle Cloud Infrastructure Notifications

Answer: A) Oracle Cloud Infrastructure Logging

2. In OCI, which feature allows you to set up automated actions based on specific events, such as scaling resources or sending notifications?

- A) Oracle Cloud Infrastructure Monitoring
- B) Oracle Cloud Infrastructure Events
- C) Oracle Cloud Infrastructure Logging
- D) Oracle Cloud Infrastructure Notifications

Answer: B) Oracle Cloud Infrastructure Events

2025 Latest VCE4Dumps 1Z0-1067-25 PDF Dumps and 1Z0-1067-25 Exam Engine Free Share: <https://drive.google.com/open?id=14an2j1pPirf4efV7ZuXGg-aHmk1pYexK>

The test software used in our products is a perfect match for Windows' 1Z0-1067-25 learning material, which enables you to enjoy the best learning style on your computer. Our 1Z0-1067-25 study materials also use the latest science and technology to meet the new requirements of authoritative research material network learning. Unlike the traditional way of learning, the great benefit of our 1Z0-1067-25 Study Materials are that when the user finishes the exercise, he can get feedback in the fastest time.

Oracle 1Z0-1067-25 Exam Syllabus Topics:

Topic	Details
Topic 1	Deploying and Managing Resources: This section of the exam covers the deployment and management of core OCI services. It focuses on manual provisioning, using the OCI Command Line Interface (CLI) for managing resources, and utilizing infrastructure as code to create consistent and repeatable deployments.
Topic 2	Implementing Observability: This section of the exam focuses on monitoring and maintaining cloud infrastructure. It covers implementing Metric Query Language (MQL) for analyzing performance data, setting up alarms and notifications for system events, and performing health checks to ensure the stability of cloud services.

Topic 3	Managing Identity and Security: This section of the exam focuses on securing cloud environments. It includes implementing security best practices for tenancy, managing encryption keys and secrets, and enforcing least-privilege access control policies to protect sensitive resources.

100% Pass Useful 1Z0-1067-25 - Oracle Cloud Infrastructure 2025 Cloud Ops Professional Exam Review

If you buy our 1Z0-1067-25 practice prep, you will get more than just a question bank. You will also get our meticulous after-sales service. The purpose of the 1Z0-1067-25 study materials' team is not to sell the materials, but to allow all customers who have purchased 1Z0-1067-25 Exam Materials to pass the exam smoothly. And if you have any question about our 1Z0-1067-25 training guide, our services will help you solve it in the first time.

Oracle Cloud Infrastructure 2025 Cloud Ops Professional Sample Questions (Q93-Q98):

NEW QUESTION # 93

You have been brought in to help secure an existing application that leverages Object Storage buckets to distribute content. The data is currently being shared from public buckets and the security team is not satisfied with this approach. They have stated that all data must be stored in storage buckets. Your application should be able to provide secure access to the data. The URL that is provided for access to the data must be rotated every 30 days. Which design option will meet these requirements?

- A. Use Pre-Authenticated request, even though there will be multiple URLs this will provide better security.
- B. Create multiple bucket and classify them as Public and Private. Use public bucket for non-sensitive data and private bucket for sensitive data.
- C. Create a private bucket only to share the data.
- D. Create a new group and map users to this group, create a IAM policy providing access to Object Storage service only to this group. Users can then simply login to OCI console and retrieve needed files.

Answer: A

NEW QUESTION # 94

Multiple teams are sharing a tenancy in Oracle Cloud Infrastructure (OCI). You are asked to figure out an appropriate method to manage OCI costs. Which is NOT a valid technique to accurately attribute costs to resources used by each team? (Choose the best answer.)

- A. Create a Cost-Tracking tag. Apply this tag to all resources with team information. Use the OCI cost analysis tools to filter costs by tags.
- B. Define and use tags for resources used by each team. Analyze usage data from the OCI Usage Report which has detailed information about resources and tags.
- C. Create separate compartment for each team. Use the OCI cost analysis tools to filter costs by compartment.
- D. Create an Identity and Access Management (IAM) group for each team. Create an OCI budget for each group to track spending.

Answer: D

NEW QUESTION # 95

You have created an Autonomous Data Warehouse (ADW) service in your company Oracle Cloud Infrastructure (OCI) tenancy and you now have to load historical data into it. You have already extracted this historical data from multiple data marts and data warehouses. This data is stored in multiple CSV text files and these files are ranging in size from 25 MB to 20 GB. Which is the most efficient and error tolerant method for loading data into ADW? (Choose the best answer.)

- A. Create Auth token, use it to create an object storage credential by executing

DBMS_CLOUD.CREATE_CREDENTIAL, using the web console upload the CSV files to an OCI object storage bucket, create the tables in the ADW database and then execute DBMS_CLOUD.COPY_DATA for each CSV file to copy the contents into the corresponding ADW database table.

- B. Create the tables in the ADW database and then execute SQL*Loader for each CSV file to load the contents into the corresponding ADW database table.
- C. Create Auth token, use it to create an object storage credential by executing DBMS_CLOUD.CREATE_CREDENTIAL, using OCI CLI upload the CSV files to an OCI object storage bucket, create the tables in the ADW database and then execute DBMS_CLOUD.COPY_DATA for each CSV file to copy the contents into the corresponding ADW database table.
- D. Create Auth token, use it to create an object storage credential by executing DBMS_CLOUD.CREATE_CREDENTIAL, using OCI CLI upload the CSV files to an OCI object storage bucket, create the tables in the ADW database and then execute Data Pump Import for each CSV file to copy the contents into the corresponding ADW database table.

Answer: C

NEW QUESTION # 96

SIMULATION

Scenario: 2 (Oracle Cloud-init and AutoScaling: Use cloud-init to Configure Apache on Instances in an Autoscaling Instance Pool)

Scenario Description: (Hands-On Performance Exam Certification) You're deploying an Apache-based web application on OCI that requires horizontal autoscaling.

To configure instances upon provisioning, write a cloud-init script for Oracle Linux 8 that installs and enables Apache (httpd), and opens the firewall for HTTP on TCP port 80. Create an instance configuration and include the cloud-init script in it. Use this instance configuration to create an instance pool and autoscaling configuration.

Pre-Configuration:

To fulfill this requirement, you are provided with the following:

Access to an OCI tenancy, an assigned compartment, and OCI credentials

A VCN Cloud-Init Challenge VCN with an Internet gateway and a public subnet. The security list for the subnet allows ingress via TCP ports 22 and 80 (SSH and HTTP). The route table forwards all egress to the Internet gateway.

Access to the OCI Console

Required IAM policies

An SSH key pair for the compute instance

Public Key https://objectstorage.us-ashburn-1.oraclecloud.com/n/tenancyname/b/PBT_Storage/o/PublicKey.pub Private Key

https://objectstorage.us-ashburn-1.oraclecloud.com/n/tenancyname/b/PBT_Storage/o/PKey.key Note: Throughout your exam, ensure to use assigned Compartment, User Name, and Region.

Complete the following tasks in the provisioned OCI environment:

Task 1(a): Develop the cloud-init Script:

Task 1(b): Use cloud-init to Configure Apache on Instances in an Autoscaling Instance Pool:

Answer:

Explanation:

See the solution below with Step by Step Explanation

Explanation:

Task 1(a): Develop the cloud-init Script:

Create a compute instance pbt_cloud_init_vm_01 with the following properties:

Shape: VM.Standard.A1.Flex instance with 1 OCPU and 6 GB memory

Image: Oracle Linux 8

Placement: Use any of the availability domains

Network:

Place in the public subnet Cloud-Init Challenge SNT

Assign a public IPv4

Use the SSH public key

Add a cloud-init script and perform the following:

Use yum or dnf to install httpd.

Use systemctl to enable and start httpd

Open the firewall to http:

```
sudo firewall-offline-cmd --add-service=http
```

```
systemctl restart firewalld
```

Mark Complete

Task 1(b): Use cloud-init to Configure Apache on Instances in an Autoscaling Instance Pool:

You're deploying an Apache-based web application on OCI that requires horizontal autoscaling.

To configure instances upon provisioning, write a cloud-init script for Oracle Linux 8 that installs and enables Apache (httpd), and opens the firewall for HTTP on TCP port 80. Create an instance configuration and include the cloud-init script in it. Use this instance configuration to create an instance pool and autoscaling configuration.

Task 2: Create an Autoscaling Instance Pool Including the cloud-init Script:

Create an instance configuration named `pbt_cloud_init_config_01` with the following properties:

Shape: VM.Standard.A1.Flex instance with 1 OCPU and 6 GB memory

Image: Oracle Linux 8

Placement: Use any of the availability domains

Network:

Place in the public subnet Cloud-Init Challenge SNT

Assign a public IPv4

Use the SSH public key

Attach the cloud-init script created in Task 1

Create an instance pool named `pbt_cloud_init_pool_01` with one instance by using the instance configuration

`pbt_cloud_init_config_01` Create and attach an autoscaling configuration named `pbt_cloud_autoscaling_config_01` with the following settings:

Metric-based autoscaling

Cooldown: 300 second

Performance metric: CPU utilization

Scale-out rule:

Operator: Greater than (>)

Threshold: 75%

Number of instances to add: 1

Scale-in rule:

Operator: Less than (<)

Threshold: 25%

Number of instances to remove: 1

Scaling limits:

Minimum number of instances: 1

Maximum number of instances: 2

Initial number of instances: 1

Task 1: Develop the cloud-init script

In the main menu, go to Compute > Instances and click Create an Instance In the instance creation menu, enter the following details

a. Name: Provide name given in the instructions b. Compartment: Use the assigned compartment c. Placement: Use any of the

availability domains d. Image: Oracle Linux 8 e. Shape: VM.Standard.A1.Flex instance with 1 OCPU and 6 GB memory f.

Network:

i. Place in the public subnet

ii. Assign a public IPv4

g. SSH keys: Upload or paste the provided SSH public key

h. Boot volume: Leave as default

i. Under advanced options, add the following cloud-init script:

```
#!/bin/sh
sudo dnf install httpd --assumeyes --quiet
sudo systemctl enable httpdsudo systemctl start httpdsudo firewall-offline-cmd --add-service=http
sudo systemctl restart firewalld j. Create the instance.
```

Task 2: Create an autoscaling instance pool including the cloud-init script

1. In the main menu, go to Compute > Instance Configurations. Click Create instance configuration.

a. In the instance configuration creation menu, enter the same details as before:

b. Name: Provide name given in the instruction/if not specified provide any name c. Compartment: Assigned compartment d.

Placement: Use any of the availability domains e. Image: Oracle Linux 8 f. Shape: VM.Standard.A1.Flex instance with 1 OCPU and 6 GB memory g. Network:

i. Place in the public subnet

ii. Assign a public IPv4

h. SSH keys: Upload or paste the provided SSH public key

i. Boot volume: Leave as default

j. Under advanced options, add the following cloud-init script:

```
#!/bin/sh
sudo dnf install httpd --assumeyes --quiet
sudo systemctl enable httpdsudo systemctl start httpdsudo firewall-offline-cmd --add-service=http
sudo systemctl restart firewalld k. Create the instance configuration.
```

Task 2: In the main menu, go to Compute > Instance Pools. Click Create instance pool.

Enter the following details:

a. Name: Provide name given in the instruction/if not specified provide any name b. Compartment: Assigned compartment c.

Instance configuration: Created in last step d. Number of instances: 1 e. Select any availability domain f. Leave fault domain unselected g. Primary VNIC: Provided VCN in the instructions h. Subnet: Public subnet i. Do not attach a load balancer j. Create the instance pool Task 3: In the main menu, go to Compute > Autoscaling Configurations. Click Create autoscaling configuration and enter the following details:

- a. Name: Provide name given in the instruction/if not specified provide any name b. Compartment: Assigned compartment c. Instance Pool: Created in last step d. Select Metric-based autoscaling e. Autoscaling policy name: Does not matter f. Cooldown: 300 seconds g. Performance metric: CPU utilization h. Scale-out rule:
 - i. Operator: Greater than (>)
 - ii. Threshold: 75%
 - iii. Number of instances to add: 1
- i. Scale-in rule:
 - i. Operator: Less than (<)
 - ii. Threshold: 25%
 - iii. Number of instances to remove: 1
- j. Scaling limits:
 - i. Minimum number of instances: 1
 - ii. Maximum number of instances: 2
 - iii. Initial number of instances: 1
- k. Create the autoscaling configuration.

NEW QUESTION # 97

You are using Oracle Cloud Infrastructure (OCI) console to set up an alarm on a budget to track your OCI spending. Which two are valid targets for creating a budget in OCI? (Choose two.)

- A. Select Cost-Tracking Tags as the type of target for your budget.
- B. Select Compartment as the type of target for your budget.
- C. Select Tenancy as the type of target for your budget.
- D. Select group as the type of target for your budget.
- E. Select user as the type of target for your budget.

Answer: A,B

NEW QUESTION # 98

.....

Oracle trained experts have made sure to help the potential applicants of Oracle 1Z0-1067-25 certification to pass their Oracle 1Z0-1067-25 exam on the first try. Our PDF format carries real Oracle Cloud Infrastructure 2025 Cloud Ops Professional exam dumps. You can use this format of Oracle 1Z0-1067-25 Actual Questions on your smart devices.
