

1Z0-1072-25 Top Questions & 1Z0-1072-25 Exam Lab Questions

BTW, DOWNLOAD part of 2Pass4sure 1Z0-1072-25 dumps from Cloud Storage: https://drive.google.com/open?id=1dZ0AgYSWmpmG_RnkngG4DRDo9S9bWKX8

1Z0-1072-25 certification exam opens the doors for starting a bright career. After passing the Oracle Cloud Infrastructure 2025 Architect Associate 1Z0-1072-25 test you will easily apply for well-paid jobs in top companies all over the world. 1Z0-1072-25 exam offers multiple advantages including, high salaries, promotions, enhancing resumes, and skills improvement. Once you pass the 1Z0-1072-25 Exam, you can avail all these benefits. If you want to pass the Oracle 1Z0-1072-25 certification exam, you must find the best resource to prepare for the 1Z0-1072-25 test.

Most candidates reflect our 1Z0-1072-25 test questions matches more than 90% with the real exam. We get information from special channel. If 1Z0-1072-25 exam change questions, we will get the first-hand real questions and our professional education experts will work out the right answers so that 1Z0-1072-25 Test Questions materials produce. If you are looking for valid & useful exam study materials, our products are suitable for you. We offer one year free updates for every buyer so that you can share latest 1Z0-1072-25 test questions within a year.

1Z0-1072-25 Exam Lab Questions | Valid 1Z0-1072-25 Exam Answers

Before you can become a professional expert in Oracle technology, you need to pass 1Z0-1072-25 exam test. It means you should get the 1Z0-1072-25 certification. The 1Z0-1072-25 actual exam is challenging and passing is definitely requires a lot of hard work and effort. 2Pass4sure will provide the latest and valid 1Z0-1072-25 test study material to you. It just needs to be taken 20-30 hours for preparation, then you can attend the actual test with confident. Besides, in case of failure, we will give you full refund. While, 100% pass is the guarantee we promise to our customers.

Oracle Cloud Infrastructure 2025 Architect Associate Sample Questions (Q47-Q52):

NEW QUESTION # 47

Which statement accurately describes ephemeral principals?

- **A. Ephemeral principals are temporary credentials granted to resources.**
- B. Ephemeral principals represent long-lived service accounts.
- C. Ephemeral principals are user accounts with limited lifespans.
- D. Ephemeral principals are another term for dynamic groups.

Answer: A

Explanation:

Ephemeral principals in Oracle Cloud Infrastructure (OCI) refer to temporary security credentials granted to resources, such as compute instances, to enable them to interact with OCI services securely. These credentials have a limited lifespan and are typically used in situations where resources need to authenticate temporarily without the need for long-lived credentials.

Use Case: Ephemeral principals are often used for instance principals, allowing compute instances to make API calls without the need to manage long-term keys or credentials.

NEW QUESTION # 48

By default, OCI IAM policies follow the principle of least privilege. What does this principle mean in the context of policy creation?

- A. Policies should grant all possible permissions to simplify access control.
- B. Policies should be identical for all users within a tenancy.
- C. Policies should be written in a complex and technical manner to enhance security.
- **D. Policies should provide only the minimum set of permissions required for users to perform their tasks effectively.**

Answer: D

Explanation:

The principle of least privilege is a security best practice that dictates that users should only be granted the minimum set of permissions necessary to perform their tasks. This principle helps to minimize the risk of accidental or malicious actions that could compromise security.

IAM Policies in OCI: When creating IAM policies in OCI, you should carefully evaluate the required permissions and only grant those that are absolutely necessary for the users or groups to perform their specific roles. This helps to reduce the attack surface and prevent unauthorized access to sensitive resources.

NEW QUESTION # 49

Which components are required for establishing remote peering between two Virtual Cloud Networks (VCNs) in Oracle Cloud Infrastructure (OCI)?

- A. Two VCNs with nonoverlapping CIDRS in the same region, a dynamic routing gateway (DRG) attached to each VCN, and a direct connection between the DRGs.
- B. A single VCN with nonoverlapping CIDRS in each region, a dynamic routing gateway (DRG) attached to each VCN, and a direct connection between the DRGs.
- **C. Two VCNs with nonoverlapping CIDRS in different regions, a dynamic routing gateway (DRG) attached to each VCN, a remote peering connection (RPC) on each DRG, and a connection established between the RPCs.**
- D. Two VCNs with overlapping CIDRS in different regions, a virtual private network (VPN) gateway attached to each VCN, and a direct connection between the VPN gateways.

Answer: C

Explanation:

Remote peering in Oracle Cloud Infrastructure allows two VCNs in different regions to communicate securely. To establish remote peering, the following components are required:

Two VCNs with Nonoverlapping CIDRs:

The CIDR blocks of the two VCNs must not overlap. This is crucial to avoid routing conflicts and ensure that traffic is correctly routed between the VCNs.

Dynamic Routing Gateway (DRG) Attached to Each VCN:

A DRG is a virtual router that provides a path for traffic between the VCN and networks outside the VCN, such as other VCNs via remote peering, on-premises networks, or other cloud services. Each VCN needs its own DRG.

Remote Peering Connection (RPC):

An RPC is a specialized connection on the DRG used specifically for remote peering. You need to create an RPC on each DRG associated with the VCNs you wish to peer.

Connection Between RPCs:

Finally, a connection must be established between the RPCs of the two DRGs. This connection facilitates the secure and private exchange of traffic between the VCNs over Oracle's backbone network.

Incorrect Options:

Option A involves a single VCN, which does not fulfill the requirement of remote peering between two VCNs.

Option B involves overlapping CIDRs and VPN gateways, which are incorrect for remote peering.

Option C suggests peering within the same region, which would be considered local peering rather than remote peering.

Relevant OCI Documentation:

OCI Remote VCN Peering

Dynamic Routing Gateway (DRG) Overview

These resources provide a detailed guide on configuring remote peering in OCI, ensuring secure and effective communication between VCNs across regions.

NEW QUESTION # 50

Which TWO statements are TRUE about Private IP addresses in Oracle Cloud Infrastructure (OCI)?

- A. Each VNIC can only have one private IP address.
- B. A private IP can have an optional public IP assigned to it if it resides in a public subnet.
- C. By default, the primary VNIC of an instance in a subnet has one primary private IP address.
- D. By default, the primary VNIC of an instance in a subnet has one primary private IP address and one secondary private IP address.

Answer: B,C

Explanation:

In Oracle Cloud Infrastructure (OCI), understanding how private IP addresses work is crucial for configuring network interfaces and managing instances within your Virtual Cloud Network (VCN).

Primary VNIC and Private IP Address:

When an instance is launched in OCI, it is attached to a Virtual Network Interface Card (VNIC). The primary VNIC, which is automatically created during the instance launch, is associated with a primary private IP address by default. This private IP address is essential for the instance to communicate within the VCN. The primary private IP address is automatically assigned and cannot be removed from the primary VNIC while the instance is running. This supports the statement C.

Additional Private IPs:

Contrary to statement B, each VNIC can indeed have multiple private IP addresses, but by default, the primary VNIC comes with only one primary private IP. You can manually add secondary private IPs if needed. However, the additional IPs are not assigned by default; hence, A is incorrect.

Public IP Association:

For instances requiring internet access, a public IP address can be optionally assigned to the private IP address if the instance is in a public subnet. This is critical for scenarios where an instance needs to communicate with the internet or external networks. This aligns with statement D.

Relevant OCI Documentation:

Oracle Cloud Infrastructure Networking Overview

VNICs and Private IPs

These references provide additional context and detail on how private IP addresses work within OCI and clarify the correct statements.

NEW QUESTION # 51

Which of the following is a valid RFC 1918 CIDR prefix that can be used for creating an Oracle Cloud Infrastructure (OCI) Virtual Cloud Network (VCN)?

- A. 192.268.0.0/24
- B. 10.0.0.0/8

- C. 0.0.0.0/0
- D. 192.168.0.0/16

Answer: B,D

Explanation:

RFC 1918 defines IP address ranges that are reserved for private networks, which cannot be routed on the public internet. In Oracle Cloud Infrastructure (OCI), these private IP address ranges can be used to create Virtual Cloud Networks (VCNs). The valid RFC 1918 CIDR prefixes include:

192.168.0.0/16: A private IP range often used in home networks.

10.0.0.0/8: A large private IP range commonly used in enterprise networks.

Invalid Options:

B . 0.0.0.0/0: This CIDR represents all IP addresses and is not a valid private IP range.

C . 192.268.0.0/24: This is not a valid IP address range as the octet "268" is outside the allowable range of 0-255.
