

1Z0-1072-25 Valid Exam Bootcamp, 1Z0-1072-25 New Braindumps Files

DOWNLOAD the newest Exam4Tests 1Z0-1072-25 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1dZmPzrvInjSk05QHcDXstksaLMgWO2yF>

All of our 1Z0-1072-25 exam questions have high pass rate as 99% to 100% and they are valid. We revise our 1Z0-1072-25 study guide aperiodicity. You may rest assured that what you purchase are the latest and high-quality 1Z0-1072-25 preparation materials. We guarantee our 1Z0-1072-25 practice prep will be good value for money, every user will benefit from our 1Z0-1072-25 Exam Guide. If you fail exams we will refund the full test dumps cost to you soon. Every extra penny deserves its value. Our 1Z0-1072-25 test questions will be your best choice.

Oracle certification is recognized by all companies of most countries in the world. If you get this certification you have a space in IT field all over the world. If you are still headache about your 1Z0-1072-25, our 1Z0-1072-25 valid exam learning materials will be a good choice for you. Exam4Tests releases valid exam learning materials for IT exam. Purchasing our 1Z0-1072-25 valid exam learning materials will make you get double results with half the work. Why not to buy?

Practical Oracle 1Z0-1072-25: Oracle Cloud Infrastructure 2025 Architect Associate Valid Exam Bootcamp - Top Exam4Tests 1Z0-1072-25 New Braindumps Files

With Exam4Tests user-friendly Oracle Cloud Infrastructure 2025 Architect Associate (1Z0-1072-25) PDF format, you can prepare for the exam from any location at any time via laptops, tablets, and smartphones. In this Oracle 1Z0-1072-25 PDF document, we have included latest and 1Z0-1072-25 Real Exam Questions. Exam4Tests has made the 1Z0-1072-25 PDF format to make it easier for students to acquire knowledge they need to ace the Oracle exam.

Oracle Cloud Infrastructure 2025 Architect Associate Sample Questions (Q44-Q49):

NEW QUESTION # 44

Which Traffic Management Steering Policy facilitates the distribution of DNS traffic based on the geographical location of end users?

- A. Proximity Steering
- B. ASN Steering
- C. IP Prefix Steering
- **D. Geolocation Steering**

Answer: D

Explanation:

Geolocation Steering in OCI's Traffic Management Steering Policy allows you to distribute DNS traffic based on the geographical location of the end users. This method helps direct users to the nearest regional endpoint, optimizing latency and improving user experience.

Use Cases: Geolocation Steering is commonly used to deliver region-specific content, comply with data residency laws, or optimize service performance by directing traffic to the closest available servers.

NEW QUESTION # 45

What are the two types of capture filters that can be created for network monitoring?

- **A. Flow log capture filters and VTAP capture filters**
- B. Flow log capture filters and packet capture filters
- C. Flow control capture filters and traffic capture filters
- D. VTAP capture filters and network capture filters

Answer: A

Explanation:

In Oracle Cloud Infrastructure (OCI), there are two primary types of capture filters used for network monitoring:

Flow Log Capture Filters: These filters are used to capture and log network flow information (e.g., source and destination IP addresses, ports, protocols). Flow logs provide insights into the traffic patterns within your VCN.

VTAP Capture Filters: Virtual Test Access Point (VTAP) capture filters allow you to capture and inspect traffic from specific network interfaces or subnets without affecting the flow of traffic. This is particularly useful for deep packet inspection and monitoring purposes.

Oracle Cloud Infrastructure Documentation: VTAP

NEW QUESTION # 46

Which TWO options will accomplish a fully redundant connection from an on-premises data center to a Virtual Cloud Network (VCN) in the us-ashburn-1 region?

- A. Configure a Site-to-Site VPN from a single on-premises CPE.
- **B. Configure one FastConnect virtual circuit to the us-ashburn-1 region and a Site-to-Site VPN to the us-ashburn-1 region.**
- **C. Configure two FastConnect virtual circuits to the us-ashburn-1 region and terminate them in diverse hardware on-premises.**
- D. Configure one FastConnect virtual circuit to the us-ashburn-1 region and the second FastConnect virtual circuit to the us-phoenix-1 region.

Answer: B,C

Explanation:

For a fully redundant connection from an on-premises data center to a VCN in the OCI us-ashburn-1 region, it is important to ensure high availability and fault tolerance. Here's how each option contributes to redundancy:

Option B: Two FastConnect Virtual Circuits:

FastConnect provides a dedicated, private connection with higher bandwidth and more consistent performance compared to a VPN. To achieve redundancy, you can configure two FastConnect circuits in the same region (us-ashburn-1), each terminated on

diverse hardware on-premises. This setup ensures that even if one circuit or its associated hardware fails, the other circuit can maintain the connection. This ensures no single point of failure in the connectivity to OCI. Thus, option B is correct.

Option D: FastConnect and Site-to-Site VPN:

Another approach to redundancy is to have a mix of connection types. By setting up one FastConnect circuit and one Site-to-Site VPN, both terminating in the same region (us-ashburn-1), you create a diverse connection path. If the FastConnect connection fails, traffic can automatically route through the VPN connection, maintaining connectivity. This setup adds an extra layer of redundancy, making option D correct as well.

Incorrect Options:

Option A: Only configuring a Site-to-Site VPN from a single on-premises CPE does not provide redundancy because it involves just one connection path. If that connection or the CPE fails, there would be no fallback.

Option C: Configuring FastConnect circuits to different regions (us-ashburn-1 and us-phoenix-1) does not provide redundancy within a single region but rather across regions, which is not required for regional redundancy.

Relevant OCI Documentation:

OCI FastConnect Overview

Using Site-to-Site VPN and FastConnect for Redundancy

These references offer more detailed information on setting up redundant connections and the benefits of each connection type within OCI.

NEW QUESTION # 47

By default, OCI IAM policies follow the principle of least privilege. What does this principle mean in the context of policy creation?

- A. Policies should grant all possible permissions to simplify access control.
- B. Policies should be written in a complex and technical manner to enhance security.
- **C. Policies should provide only the minimum set of permissions required for users to perform their tasks effectively.**
- D. Policies should be identical for all users within a tenancy.

Answer: C

Explanation:

The principle of least privilege is a security best practice that dictates that users should only be granted the minimum set of permissions necessary to perform their tasks. This principle helps to minimize the risk of accidental or malicious actions that could compromise security.

IAM Policies in OCI: When creating IAM policies in OCI, you should carefully evaluate the required permissions and only grant those that are absolutely necessary for the users or groups to perform their specific roles. This helps to reduce the attack surface and prevent unauthorized access to sensitive resources.

NEW QUESTION # 48

Which statement is TRUE about delegating an existing domain to the Oracle Cloud Infrastructure (OCI) DNS service?

- **A. Domains can be delegated to OCI DNS from the Domain Registrar's self-service portal.**
- B. Domains can be self-delegated to OCI DNS from its own service portal.
- C. All domains can be retrieved to OCI DNS via DYN.
- D. Domains can be delegated to OCI DNS via FastConnect partners.

Answer: A

Explanation:

To delegate a domain to the Oracle Cloud Infrastructure (OCI) DNS service, the domain needs to be pointed to OCI's DNS servers. This can be done through the Domain Registrar's self-service portal, where you update the name servers for your domain to OCI's DNS servers.

Process: You typically log into the domain registrar where your domain is registered and replace the existing name servers with the name servers provided by OCI DNS. Once this is done, DNS queries for your domain will be directed to OCI DNS.
