Oracle 1Z0-1084-23 Certification Exam Questions and Answers PDF

Oracle 1Z0-1084-23 Exam

www.DBExam.com

Get complete detail on 1Z0-1084-23 exam guide to crack Oracle Cloud Infrastructure 2023 Developer Professional. You can collect all information on 1Z0-1084-23 tutorial, practice test, books, study material, exam questions, and syllabus. Firm your knowledge on Oracle Cloud Infrastructure 2023 Developer Professional and get ready to crack 1Z0-1084-23 certification. Explore all information on 1Z0-1084-23 exam with number of questions, passing percentage and time duration to complete test.

2025 Latest ActualTestsQuiz 1Z0-1084-25 PDF Dumps and 1Z0-1084-25 Exam Engine Free Share:

The best way of passing Oracle actual test is choosing accurate exam braindumps. ActualTestsQuiz has latest test questions and accurate exam answers to ensure you clear 1Z0-1084-25 Real Exam. You just need spend your spare time to practice Oracle top questions and review the key points of study guide, it will be easy to clear exam.

Oracle 1Z0-1084-25 Exam Syllabus Topics:

Topic	Details
Topic 1	Cloud Native Fundamentals: This section of the exam measures the skills of target audience and covers the essential principles of cloud-native development. It explains the core concepts, key pillars, and advantages of cloud-native applications. The section also focuses on microservices architecture, including its design methodology and how it supports scalable, distributed applications.
Topic 2	Monitoring & Troubleshooting Cloud-Native Applications: This section of the exam focuses on monitoring and troubleshooting cloud-native applications. It covers using OCI Monitoring to track metrics, OCI Logging for managing logs and performing tasks related to monitoring, logging, and tracing for better observability and issue resolution.

Topic 3	• Testing and Securing Cloud-Native Applications: This section focuses on testing strategies and security for cloud-native applications. It discusses different testing methodologies, securing sensitive information using OCI Vault, and implementing security measures to address cloud-native development challenges.
Topic 4	• Cloud Native Applications and Containerization: This section of the exam covers containerization technologies for cloud-native applications. It explains Docker architecture, its components, and the process of pulling and pushing container images using Oracle Cloud Infrastructure Registry (OCIR). It also explores container orchestration, deploying applications on Oracle Kubernetes Engine (OKE), and using OCI Service Mesh for Kubernetes deployments.
Topic 5	• Leveraging Serverless Technologies for Cloud Native Development: This section of the exam measures the skills of professionals in serverless development within OCI. It covers creating serverless applications using Oracle Functions, building API gateways for routing traffic, and integrating systems through OCI Streaming Service. Additionally, it explores event-driven architectures using OCI Event Service and how OCI Queue enables asynchronous messaging between microservices.

2025 Authoritative 1Z0-1084-25 – 100% Free Exam Forum | Training Oracle Cloud Infrastructure 2025 Developer Professional Material

We promise that you can get through the challenge winning the 1Z0-1084-25 exam within a week. There is no life of bliss but bravely challenging yourself to do better. So there is no matter of course. Among a multitude of 1Z0-1084-25 practice materials in the market, you can find that our 1Z0-1084-25 Exam Questions are the best with its high-quality and get a whole package of help as well as the best quality 1Z0-1084-25 study materials from our services.

Oracle Cloud Infrastructure 2025 Developer Professional Sample Questions (Q63-Q68):

NEW QUESTION # 63

Which is NOT a valid option to execute a function deployed in Oracle Functions?

- A. Invoke from the OCI CLI.
- B. Trigger by an event in the Oracle Cloud Infrastructure (OCI) Events service.
- C. Send signed HTTP requests to the function's invoke endpoint.
- D. Invoke from the Fn Project CLI.
- E. Invoke from the Docker CLI.

Answer: E

Explanation:

The correct answer is: Invoke from the Docker CLI. Explanation: Executing a function deployed in Oracle Functions is typically done using the following options: Invoke from the Fn Project CLI: The Fn Project CLI provides a command-line interface specifically designed for interacting with Oracle Functions. You can use commands like `fn invoke` to invoke a function. Trigger by an event in the Oracle Cloud Infrastructure (OCI) Events service: You can configure events in OCI to trigger your function based on various criteria, such as object storage events, resource state changes, or scheduled events. Invoke from the OCI CLI: The OCI CLI (Command Line Interface) allows you to interact with various services in Oracle Cloud Infrastructure, including Oracle Functions. You can use the `fn invoke` command to invoke a function. Send signed HTTP requests to the function's invoke endpoint: Oracle Functions provides an HTTP endpoint that can be used to invoke functions. You can send signed HTTP requests to this endpoint using tools or programming languages that support making HTTP requests. On the other hand, invoking a function deployed in Oracle Functions using the Docker CLI is not a valid option. The Docker CLI is primarily used for managing Docker containers and images, and it does not provide a direct mechanism for invoking functions in Oracle Functions.

NEW QUESTION # 64

Which testing measure should be considered when using test cases that simultaneously validate a deployment and perform a selected

set of functional tasks?

- A. Scalability
- B. Resiliency
- **C. Robust Deployment**
- D. Resource Utilization
- E. Functionality

Answer: C

Explanation:

The correct answer is: "Robust Deployment." When using test cases that simultaneously validate a deployment and perform a selected set of functional tasks, the testing measure that should be considered is "Robust Deployment." Robust Deployment refers to the ability of an application or system to be deployed reliably and consistently, without errors or failures. It involves ensuring that the deployment process is well-defined, automated, and able to handle different scenarios and configurations. When conducting testing that combines the validation of deployment and functional tasks, it is crucial to ensure that the deployment itself is robust. This means verifying that the application or system can be successfully deployed and configured without encountering deployment-related issues such as incorrect configurations, missing dependencies, or compatibility problems. By considering "Robust Deployment" as a testing measure, you can evaluate the reliability and effectiveness of the deployment process, ensuring that the application or system is deployed correctly and ready to perform the selected set of functional tasks.

NEW QUESTION # 65

In the DevOps lifecycle, what is the difference between continuous delivery and continuous deployment? (Choose two.)

- A. Continuous delivery involves automation of developer tasks, while continuous deployment involves manual operational tasks.
- **B. Continuous delivery utilizes automatic deployment to a development environment, while continuous deployment involves automatic deployment to a production environment.**
- C. Continuous delivery requires more automatic linting, while continuous deployment testing must be run manually.
- **D. Continuous delivery is a process that initiates deployment manually, while continuous deployment is based on automating the deployment process.**

Answer: B,D

Explanation:

The two correct differences between continuous delivery and continuous deployment in the DevOps lifecycle are: Continuous delivery is a process that initiates deployment manually, while continuous deployment is based on automating the deployment process. In continuous delivery, the software is ready for deployment, but the decision to deploy is made manually by a human. On the other hand, continuous deployment automates the deployment process, and once the software passes all the necessary tests and quality checks, it is automatically deployed without human intervention. Continuous delivery involves automatic deployment to a development environment, while continuous deployment involves automatic deployment to a production environment. In continuous delivery, the software is automatically deployed to a development or staging environment for further testing and validation. However, the actual deployment to the production environment is performed manually. In continuous deployment, the software is automatically deployed to the production environment, eliminating the need for manual intervention in the deployment process. These differences highlight the level of automation and human involvement in the deployment process between continuous delivery and continuous deployment approaches in the DevOps lifecycle.

NEW QUESTION # 66

Which concept in OCI Queue is responsible for hiding a message from other consumers for a predefined amount of time after it has been delivered to a consumer?

- A. Maximum retention period
- **B. Visibility timeout**
- C. Delivery count
- D. Polling timeout

Answer: B

Explanation:

Visibility timeout is the concept in OCI Queue that is responsible for hiding a message from other consumers for a predefined amount of time after it has been delivered to a consumer¹. The visibility timeout can be set at the queue level when creating a queue, or it can be specified when consuming or updating messages¹. If a consumer is having difficulty successfully processing a message, it can update the message to extend its invisibility¹. If a message's visibility timeout is not extended, and the consumer does not delete the message, it returns to the queue¹. Verified Reference: Overview of Queue

NEW QUESTION # 67

You are tasked with developing an application that requires the use of Oracle Cloud Infrastructure (OCI) APIs to POST messages to a stream in the OCI Streaming service. Which statement is incorrect? (Choose the best answer.)

- A. The request must include an authorization signing string including (but not limited to) x-content-sha256, content-type, and content-length headers.
- B. The Content-Type header must be set to application/json
- C. An HTTP 401 will be returned if the client's clock is skewed more than 5 minutes from the server's.
- D. The request does not require an Authorization header.

Answer: D

Explanation:

The statement that is incorrect is: "The request does not require an Authorization header." In order to POST messages to a stream in the OCI Streaming service using OCI APIs, the request does require an Authorization header. The Authorization header is used to provide authentication and ensure the request is authorized to access the stream. The correct approach is to include the Authorization header in the request, along with other required headers such as x-content-sha256, content-type, and content-length. Therefore, the incorrect statement is that the request does not require an Authorization header.\

NEW QUESTION # 68

.....

The 1Z0-1084-25 exam questions are the perfect form of a complete set of teaching material, teaching outline will outline all the knowledge points covered, comprehensive and no dead angle for the 1Z0-1084-25 candidates presents the proposition scope and trend of each year, truly enemy and know yourself, and fight. Only know the outline of the 1Z0-1084-25 Exam, can better comprehensive review, in the encounter with the new and novel examination questions will not be confused, interrupt the thinking of users.
