Questions & Answers PDF Online Engine Demo

Question 1

Which two are On-prem Connectivity Options with Oracle Integration Cloud (OIC)?

A ☐ VPN
B ☐ Connectivity Agent
C ☐ PaaS Agent
D ☐ Execution Agent

Expose Correct Answer

Answer : B, C

Next Question

Question 2

Which two are types of Authentication that are supported for Services in Integration API Platform Cloud Service?

A ☐ Kerberos
B ☐ WSS Username Token
C ☐ OAuth2
D ☐ BasicAuth

Leave a message

Do you want to pass exam 100% one-shot? Do you want to get certification fast? Oracle 1Z0-1084-25 actual test question is a good way. If you study hard, 20-40 hours' preparation will help you pass exam. Once you clear 1Z0-1084-25 exam and obtain certification you will have a bright future. You have a great advantage over the other people. Oracle 1Z0-1084-25 Actual Test questions have effective high-quality content and cover at least more than 88% of the real test questions. Looking for the best exam preparation, ours is the best.

Oracle 1Z0-1084-25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Cloud Native Applications and Containerization: This section of the exam covers containerization technologies for cloud-native applications. It explains Docker architecture, its components, and the process of pulling and pushing container images using Oracle Cloud Infrastructure Registry (OCIR). It also explores container orchestration, deploying applications on Oracle Kubernetes Engine (OKE), and using OCI Service Mesh for Kubernetes deployments.
Topic 2	<ul style="list-style-type: none">Monitoring & Troubleshooting Cloud-Native Applications: This section of the exam focuses on monitoring and troubleshooting cloud-native applications. It covers using OCI Monitoring to track metrics, OCI Logging for managing logs and performing tasks related to monitoring, logging, and tracing for better observability and issue resolution.

Topic 3	<ul style="list-style-type: none"> • Cloud Native Fundamentals: This section of the exam measures the skills of target audience and covers the essential principles of cloud-native development. It explains the core concepts, key pillars, and advantages of cloud-native applications. The section also focuses on microservices architecture, including its design methodology and how it supports scalable, distributed applications.
Topic 4	<ul style="list-style-type: none"> • Testing and Securing Cloud-Native Applications: This section focuses on testing strategies and security for cloud-native applications. It discusses different testing methodologies, securing sensitive information using OCI Vault, and implementing security measures to address cloud-native development challenges.
Topic 5	<ul style="list-style-type: none"> • Leveraging Serverless Technologies for Cloud Native Development: This section of the exam measures the skills of professionals in serverless development within OCI. It covers creating serverless applications using Oracle Functions, building API gateways for routing traffic, and integrating systems through OCI Streaming Service. Additionally, it explores event-driven architectures using OCI Event Service and how OCI Queue enables asynchronous messaging between microservices.

Oracle certification 1Z0-1084-25 exam training materials

One of the biggest highlights of the Oracle Cloud Infrastructure 2025 Developer Professional prep torrent is the availability of three versions: PDF, app/online, and software/pc, each with its own advantages: The PDF version of 1Z0-1084-25 Exam Torrent has a free demo available for download. You can print exam materials out and read it just like you read a paper. The online version of 1Z0-1084-25 test guide is based on web browser usage design and can be used by any browser device. At the same time, the first time it is opened on the Internet, it can be used offline next time. You can practice anytime, anywhere. The Oracle Cloud Infrastructure 2025 Developer Professional software supports the MS operating system and can simulate the real test environment. The contents of the three versions are the same.

Oracle Cloud Infrastructure 2025 Developer Professional Sample Questions (Q40-Q45):

NEW QUESTION # 40

Which command is used to get a Docker image from Oracle Cloud Infrastructure Registry (OCIR) to the client machine?

- A. docker pull <tenancy-namespace>/<region-key>.ocir.io/<repo-name>:<tag>
- B. docker fetch <tenancy-namespace>/<region-key>.ocir.io/<repo-name>:<tag>
- C. docker pull <region-key>.ocir.io/<tenancy-namespace>/<repo-name>:<tag>
- D. docker fetch <region-key>.ocir.io/<tenancy-namespace>/<repo-name>:<tag>

Answer: C

Explanation:

To pull a Docker image from OCI Registry to the client machine, you need to use the docker pull command with the following syntax1: docker pull <region-key>.ocir.io/<tenancy-namespace>/<repo-name>:<tag> where:

<region-key> is the key for the OCI Registry region you're using. For example, iad. See Availability by Region1.

ocir.io is the OCI Registry name.

<tenancy-namespace> is the auto-generated Object Storage namespace string of the tenancy that owns the repository from which you want to pull the image (as shown on the Tenancy Information page)1.

<repo-name> is the name of the repository that contains the image you want to pull.

<tag> is the tag of the image you want to pull.

NEW QUESTION # 41

You are creating an API deployment in Oracle Cloud Infrastructure (OCI) API Gateway and you want to configure request policies to control access. Which is NOT available in OCI API Gateway?

- A. Providing authentication and authorization.
- B. Enabling Cross-Origin Resource Sharing (CORS) support.

- C. Limiting the number of requests sent to the backend services.
- **D. Controlling access to the backend OCI resources.**

Answer: D

Explanation:

The correct answer is: Controlling access to the backend OCI resources. OCI API Gateway does not provide direct control over access to backend OCI resources. It primarily focuses on managing and securing access to APIs exposed through the gateway. The gateway acts as a front-end for APIs and provides features such as authentication, authorization, rate limiting, and CORS support. While you can configure authentication and authorization policies, limit the number of requests, and enable CORS support in OCI API Gateway, it does not directly control access to backend OCI resources. Access to backend resources is typically managed through other means, such as IAM policies, network security rules, or resource-specific access controls.

NEW QUESTION # 42

Your company has recently deployed a new web application that uses Oracle Functions. Your manager instructs you to implement monitoring metrics to manage your systems more effectively. You know that Oracle Functions automatically monitors functions on your behalf and reports metrics via Oracle Cloud Infrastructure (OCI) Monitoring. Which TWO metrics are collected and made available by this feature? (Choose two.)

- A. Number of times a function is invoked
- **B. Amount of CPU used by a function**
- C. Number of times a function is removed
- **D. Amount of RAM used by a function**
- E. Length of time a function runs

Answer: B,D

Explanation:

The correct answers are: Amount of RAM used by a function: Oracle Functions collects and reports the amount of memory (RAM) used by a function during its execution. This metric helps in monitoring and optimizing the resource consumption of functions. Length of time a function runs: Oracle Functions captures and provides the duration of function executions. This metric allows you to track the performance and responsiveness of your functions and identify any potential bottlenecks or delays. These metrics provide valuable insights into the resource utilization and performance of your functions, enabling you to monitor and optimize their behavior in the Oracle Cloud Infrastructure (OCI) environment.

NEW QUESTION # 43

Which technique is used for testing the entire user flow as well as the moving parts of a cloud native app, ensuring that there are no high-level discrepancies?

- A. Integration Testing
- B. Unit Testing
- **C. End-to-end Testing**
- D. Component Testing
- E. Contract Testing

Answer: C

Explanation:

End-to-end testing is a technique that involves checking the entire user flow as well as the moving parts of a cloud native app, ensuring that there are no high-level discrepancies. End-to-end testing simulates real user scenarios and validates the functionality, performance, reliability, and security of the app from start to finish. End-to-end testing has several benefits, such as:

- Comprehensive testing: You can test your app as a whole and verify that all the components work together as expected.
- User-centric testing: You can test your app from the user's perspective and ensure that it meets the user's needs and expectations.
- Quality assurance: You can test your app in a realistic environment and identify any issues or defects before releasing it to the users.

NEW QUESTION # 44

You are tasked with developing an application that requires the use of Oracle Cloud Infrastructure (OCI) APIs to POST messages to a stream in the OCI Streaming service. Which statement is incorrect? (Choose the best answer.)

- A. The Content-Type header must be set to application/json
- B. An HTTP 401 will be returned if the client's clock is skewed more than 5 minutes from the server's.
- C. The request must include an authorization signing string including (but not limited to) x-content-sha256, content-type, and content-length headers.
- **D. The request does not require an Authorization header.**

Answer: D

Explanation:

The statement that is incorrect is: "The request does not require an Authorization header." In order to POST messages to a stream in the OCI Streaming service using OCI APIs, the request does require an Authorization header. The Authorization header is used to provide authentication and ensure the request is authorized to access the stream. The correct approach is to include the Authorization header in the request, along with other required headers such as x-content-sha256, content-type, and content-length. Therefore, the incorrect statement is that the request does not require an Authorization header.\

NEW QUESTION # 45

.....

The Oracle 1Z0-1084-25 exam dumps in all three formats are compatible with all devices, operating systems, and web browsers and assist you in Oracle Cloud Infrastructure 2025 Developer Professional 1Z0-1084-25 exam preparation and you will be ready to crack the 1Z0-1084-25 exam easily. Now you have all the necessary information that assists you in take the best decision for your professional career. The best decision is to enroll in the Oracle Cloud Infrastructure 2025 Developer Professional Exam 1Z0-1084-25 Certification Exam and download the Oracle 1Z0-1084-25 pdf questions and practice tests and start preparing today. We are quite confident that you will pass the final Oracle Cloud Infrastructure 2025 Developer Professional 1Z0-1084-25 exam easily. Best of luck with exams and your professional career!!!
