Oracle Cloud Database Services 2025 Professional Sample Questions (Q39-Q44):

NEW QUESTION # 39

When enabling Database Management Service for a cloud database, which of the following is typically NOT a configurable parameter specific to the Database Management Service itself?

- A. The specific metrics that are collected from the database.
- B. The maximum amount of storage space allocated for collected metrics.
- **C. The database version.**
- D. The frequency at which performance metrics are collected.

Answer: C

Explanation:

D: The database version:

- * The database version is not configurable through the Database Management Service.
- * The version is determined during the database instance provisioning and is independent of the management service.
- * The management service can monitor and manage databases of various versions, but it does not control or alter the version itself.

Why the other options are configurable:

- * A. Frequency of metric collection: Can be adjusted to balance performance and data granularity.
- * B. Specific metrics collected: Can be customized based on monitoring requirements.
- * C. Storage space for metrics: Some configurations allow defining the retention and storage capacity for collected data.

NEW QUESTION # 40

Which of the following components is responsible for automatically offloading suitable queries from MySQL to the HeatWave accelerator?

- A. MySQL Router
- B. Oracle Cloud Infrastructure (OCI) Load Balancer
- C. MySQL Shell
- **D. MySQL Query Optimizer**
- E. HeatWave AutoPilot

Answer: D

Explanation:

A: MySQL Query Optimizer:

- * The MySQL Query Optimizer determines whether a query can benefit from HeatWave's in-memory, columnar processing.
- * If a query is deemed suitable, it is automatically offloaded to the HeatWave cluster.
- * This process significantly improves the execution speed of complex analytical queries.

Why the other options are incorrect:

- * B. HeatWave AutoPilot: Manages workload optimization but does not directly offload queries.
- * C. MySQL Router: Manages connection routing, not query offloading.
- * D. MySQL Shell: Primarily used for administrative tasks, not query optimization.
- * E. OCI Load Balancer: Manages network traffic distribution, unrelated to database query processing.

NEW QUESTION # 41

Which two statements accurately describe the relationship between Database Management and metrics collected in OCI Monitoring service?

- A. Database Management relies on custom metrics uploaded to OCI Monitoring by the user in order to provide its monitoring features.
- B. Database Management retrieves performance data exclusively from the OCI Monitoring service and does not directly query the database.
- **C. Database Management's data collection is completely independent of the OCI Monitoring service.**
- **D. Database Management directly queries the database for detailed performance data and supplements it with metrics from the OCI Monitoring service.**

Answer: C,D

Explanation:

B: Database Management directly queries the database to gather performance data, such as SQL performance and active session

history. It also integrates with OCI Monitoring for infrastructure-level metrics like CPU, memory, and storage utilization. C:Database Management can function independently of OCI Monitoring since it has its own data collection mechanisms. Why the other options are incorrect:
* A:Database Management does not rely solely on OCI Monitoring.
* D:It does not require custom metrics from the user.

NEW QUESTION # 42

Which BaseDB lifecycle management activity is MOST directly associated with ensuring the continued availability of a database instance during a planned maintenance window?

- **A. Using Oracle Data Guard for a switchover operation.**
- B. Performing an in-place upgrade of the database software.
- C. Resizing the block volume storage.
- D. Taking a full database backup using RMAN.
- E. Applying a quarterly security patch.

Answer: A

Explanation:

C: Using Oracle Data Guard for a switchover operation:

- * Aswitchoveris a planned role reversal between the primary and standby databases.
- * Zero data loss:Since both databases are synchronized, it minimizes downtime.
- * Ideal for planned maintenance:The primary database is switched to the standby, allowing maintenance on the original primary without downtime.
- * Data Guard Switchover:

sql

CopyEdit

```
ALTER DATABASE SWITCHOVER TO standby_db;
```

Why the other options are incorrect:

- * A. Full backup with RMAN:Backup does not ensure availability during maintenance.
- * B. In-place upgrade:Typically involves downtime.
- * D. Quarterly patch:Patching often requires database restarts, causing downtime.
- * E. Resizing block volume:Does not maintain availability if the database requires restarting.

NEW QUESTION # 43

Which two functionalities can be accomplished using the Performance Hub within Database Management for monitoring?

- A. Upgrade the database to a newer version.
- **B. Identify blocking sessions that are impacting database performance.**
- C. Directly modify database initialization parameters.
- **D. Execute ADDM (Automatic Database Diagnostic Monitor) analysis on a historical workload.**

Answer: B,D

Explanation:

A: Execute ADDM (Automatic Database Diagnostic Monitor) analysis on a historical workload:

- * Performance Hub allows users to analyze performance data collected over time.
- * ADDM analysis provides insights into performance bottlenecks and recommendations for tuning.

C: Identify blocking sessions that are impacting database performance:

- * Performance Hub helps identify active blocking sessions, enabling quick resolution of performance issues.
- * It provides real-time and historical data for better troubleshooting.

Why the other options are incorrect:

- * B. Modify database parameters:Performance Hub does not have the ability to change database configurations directly.
- * D. Upgrade the database:Upgrades are managed through other tools, such as Database Upgrade Assistant (DBUA).
