Die Oracle 1z0-1104-25 Dumps von Pass4Test haben die sagenhafte Hit-Rate. Diese Dumps beinhalten alle mögliche Fragen in den aktuellen Prüfungen. Deshalb können Sie Oracle 1z0-1104-25 Prüfungen sehr leicht bestehen, wenn Sie diese Dumps ernst lernen. Als eine sehr wichtige Oracle 1z0-1104-25 Prüfung Zertifizierung spielt heute eine übergreifende Rolle. Deswegen können Sie die Chance nicht verlieren, die Prüfung zu bestehen. Pass4Test verspricht Ihnen volle Rückerstattung wenn durchgefallen. Informieren Sie bitte mehr an Pass4Test, wenn Sie die 1z0-1104-25 Zertifizierungsprüfung bestehen wollen.

Heutzutage, wo Zeit in dieser Gesellschaft sehr geschätzt wird, schlage ich Ihnen vor, die effizienten Oracle 1z0-1104-25 (Oracle Cloud Infrastructure 2025 Security Professional) Fragenkataloge von Pass4Test zu wählen. Sie können mit weniger Zeit und Geld die Oracle 1z0-1104-25 Zertifizierungsprüfung nur einmalig bestehen können.

1z0-1104-25 Übungsmaterialien - 1z0-1104-25 Lernressourcen & 1z0-1104-25 Prüfungsfragen

Pass4Test genießt schon guten Ruf auf dem IT-Prüfungssoftware Markt Deutschlands, Japans und Südkoreas. Wenn es für Sie das erste Mal, unsere Marke zu hören, können Sie zuerst auf unserer Webseite die Demos der Oracle 1z0-1104-25 gratis probieren. Dann können Sie das kundenorientierte Design von uns Pass4Test erkennen und die ausführliche Deutungen empfinden. Wenn auch die Unterlagen der Oracle 1z0-1104-25 schon am neuesten sind, werden wir immer weiter die Aktualisierungssituation überprüfen. Innerhalb einem Jahr nach Ihrem Kauf, bieten wir Ihnen gratis immer weiter die neueste Version von Oracle 1z0-1104-25 Prüfungssoftware.

Oracle 1z0-1104-25 Prüfungsplan:

Thema	Einzelheiten

Thema 1	• Implementing OS and Workload Protection: This section of the exam measures the skills of OCI Administrators and looks at securing workloads and operating systems. It includes the use of OCI Bastion for time-limited access, vulnerability scanning of hosts and containers, and the use of OS management for automated updates. The goal is to ensure that workloads remain resilient and well-protected.
Thema 2	• Implementing Identity and Access Management (IAM): This section of the exam measures skills of OCI Administrators and focuses on identity and access controls. It covers IAM domains, users, groups, and compartments, as well as the use of IAM policies to manage access to resources. Candidates are also tested on configuring dynamic groups, network sources, and tag-based access control, along with managing MFA, sign-on policies, and activity monitoring.
Thema 3	• Protecting Infrastructure - Network and Applications: This section of the exam measures the skills of Cloud Security Professionals and covers methods for securing networks and applications on OCI. Topics include network security groups, firewalls, and security lists, while also focusing on the use of load balancers for availability. The section further addresses the configuration of OCI certificates and web application firewalls to strengthen infrastructure security.
Thema 4	• Protecting Data: This section of the exam measures the skills of Cloud Security Professionals and highlights data security practices in OCI. It tests knowledge of using the Key Management Service for encryption keys, managing secrets in the OCI Vault, and applying features of OCI Data Safe to ensure sensitive data remains protected.

Oracle Cloud Infrastructure 2025 Security Professional 1z0-1104-25 Prüfungsfragen mit Lösungen (Q36-Q41):

36. Frage

"You are part of the security operations of an organization with thousands of users accessing Oracle Cloud Infrastructure (OCI). It is reported that an unknown user action was executed resulting in configuration errors. You are tasked with identifying the details of all users who were active in the last six hours along with any REST API calls that were executed.

Which OCI feature should you use?

- **A. Audit Analysis Dashboard**
- B. Object Collection Rule
- C. Service Connector Hub"
- D. Management Agent Log Ingestion

Antwort: A

37. Frage

Within OCI IAM identity domains, the AD Bridge component serves a critical role. How does the AD Bridge functionality specifically enhance Identity and Access Management (IAM) practices?

- A. It facilitates delegated administration, allowing authorized AD users to manage specific resources within the OCI identity domain.
- **B. It simplifies user provisioning by enabling automated synchronization of user accounts and group memberships from an existing Microsoft Active Directory (AD) environment.**
- C. It strengthens access security by providing an additional layer of authentication through AD integration.
- D. It directly integrates with OCI MFA providers, allowing for seamless enforcement of MFA for users authenticated through AD credentials.

Antwort: B

38. Frage

Task 7: Verify the OCI Certificate with Load Balancer

Verify HTTPS connection to the load balancer by running the following command in Cloud Shell `curl -k https://<Public IP of PBT-CERT-LB-01>` Enter the following URL in the web browser:
`https://<Public IP of PBT-CERT-LB-01>`
If prompted with a certificate error, accept the risk and continue.
Verify web page content by ensuring the text, "You are visiting Web Server 1" from the index.html file is displayed in the browser
See the solution below in Explanation.

Antwort:

Begründung:

Task 7: Verify the OCI Certificate with Load Balancer

Step 1: Obtain the Public IP of the Load Balancer

- * Log in to the OCI Console.
- * Navigate to **Networking > Load Balancers**.
- * Click on PBT-CERT-LB-01.
- * Note the Public IP Address from the load balancer details page.

Step 2: Verify HTTPS Connection Using Cloud Shell

- * Open the OCI Cloud Shell from the top-right corner of the OCI Console.
- * Run the following command, replacing <Public IP of PBT-CERT-LB-01> with the public IP you noted:
`curl -k https://<Public IP of PBT-CERT-LB-01>`
- * Expected output: You should see the text "You are visiting Web Server 1" if the connection is successful. The -k flag ignores certificate validation errors (common during initial testing with self-signed or newly issued certificates).
- * If you encounter an error, ensure the load balancer is active, the listener is configured correctly, and the backend server (PBT-CERT-VM-01) is reachable.

Step 3: Verify in a Web Browser

- * Open a web browser.
- * Enter the following URL, replacing <Public IP of PBT-CERT-LB-01> with the public IP you noted:
`https://<Public IP of PBT-CERT-LB-01>`
- * If prompted with a certificate warning (e.g., due to a self-signed certificate or untrusted CA), accept the risk and proceed (click "Advanced" and "Proceed" or similar, depending on your browser).
- * Verify that the web page displays the text "You are visiting Web Server 1" from the index.html file created on PBT-CERT-VM-01.

Step 4: Troubleshoot (if needed)

- * If the text is not displayed:
- * Check the load balancer health status under **Backend Sets > Health** in the OCI Console.
- * Ensure the security list PBT-CERT-LB-SL-01 allows port 443 and the compute instance security list allows port 80.
- * Verify the Apache service is running on PBT-CERT-VM-01 by SSHing in and running `sudo systemctl status httpd`.

39. Frage

"A business has a hybrid cloud infrastructure with Oracle Linux instances running in OCI and on-premises. They want to reduce the amount of bandwidth used when patching systems. Which component of OS Management Hub can help to reduce the bandwidth usage for patching?"

- A. Dynamic groups
- B. Management agents
- C. Management stations
- **D. Profiles**

Antwort: D

40. Frage

Challenge 2 - Task 1

In deploying a new application, a cloud customer needs to reflect different security postures. If a security zone is enabled with the Maximum Security Zone recipe, the customer will be unable to create or update a resource in the security zone if the action violates the attached Maximum Security Zone policy.

As an application requirement, the customer requires a compute instance in the public subnet. You therefore, need to configure Custom Security Zones that allow the creation of compute instances in the public subnet.

Review the architecture diagram, which outlines the resources you'll need to address the requirement:

Preconfigured

To complete this requirement, you are provided with the following:

Access to an OCI tenancy, an assigned compartment, and OCI credentials

Required IAM policies

Task3: Create and configure a Virtual Cloud Network and Private Subnet

Create and configure virtual cloud Network (VCN) named IAD SP-PBT-VCN-01, with an internet Gateway and configure appropriate route rules to allow external connectivity.

Enter the OCID of the created VCN in the text box below.

Antwort:

Begründung:

See the solution below in Explanation.

Explanation:

To create and configure a Virtual Cloud Network (VCN) named IAD-SP-PBT-VCN-01 with an Internet Gateway and appropriate route rules for external connectivity, follow these steps based on the Oracle Cloud Infrastructure (OCI) Networking documentation.

Step-by-Step Solution for Task 3: Create and Configure a VCN and Private Subnet

- * Log in to the OCI Console:
- * Use your OCI credentials to log in to the OCI Console (<https://console.us-ashburn-1.oraclecloud.com>).
- * Ensure you have access to the assigned compartment.
- * Navigate to Virtual Cloud Networks:
- * From the OCI Console, click the navigation menu (hamburger icon) on the top left.
- * Under Networking, select Virtual Cloud Networks.
- * Create a New VCN:
- * Click Start VCN Wizard and select Create VCN with Internet Connectivity.
- * VCN Name: Enter IAD-SP-PBT-VCN-01.
- * Compartment: Select the assigned compartment.
- * VCN CIDR Block: Enter 10.0.0.0/16 (matches the diagram's VCN CIDR).
- * Public Subnet CIDR Block: Enter 10.0.10.0/24 (matches the diagram's public subnet).
- * Accept the default settings for the public subnet and Internet Gateway creation.
- * Click Create to provision the VCN, Internet Gateway, and public subnet.
- * Verify the Internet Gateway:
- * After creation, go to the VCN details page for IAD-SP-PBT-VCN-01.
- * Under Resources, select Internet Gateways.
- * Ensure the Internet Gateway is attached and enabled.
- * Configure Route Rules:

- * In the VCN details page, underResources, selectRoute Tables.
 - * Select the default route table associated with the public subnet (10.0.10.0/24).
 - * ClickAdd Route Rules.
 - * Target Type:SelectInternet Gateway.
 - * Destination CIDR Block:Enter 0.0.0.0/0.
 - * Target Internet Gateway:Select the Internet Gateway created with the VCN.
 - * ClickAdd Route Ruleto save.
 - * Update Security List (if needed):
 - * UnderResources, selectSecurity Lists.
 - * Edit the default security list for the public subnet.
 - * Add an ingress rule:
 - * Source CIDR:0.0.0.0/0
 - * IP Protocol:TCP
 - * Source Port Range:All
 - * Destination Port Range:22 (for SSH) or as required by your application.
 - * Add an egress rule:
 - * Destination CIDR:0.0.0.0/0
 - * IP Protocol:All
 - * Save the changes.
 - * Note the VCN OCID:
 - * Return to the VCN details page for IAD-SP-PBT-VCN-01.
 - * Copy theOCIDdisplayed (e.g., ocid1.vcn.oc1..unique_string).
- OCID of the Created VCN
- * Enter the OCID of the created VCN (IAD-SP-PBT-VCN-01) into the text box. The exact OCID will be available after Step 3 (e.g., ocid1.vcn.oc1..unique_string).

41. Frage

.....

Die Prüfungsfragen und Antworten von Pass4Test Oracle 1z0-1104-25 bieten Ihnen alles, was Sie zur Prüfungsvorbereitung brauchen. Für Oracle 1z0-1104-25 Prüfung können Sie auch Lernhilfe aus anderen Websites oder Büchern finden. Aber Hauptsache ist es, sie müssen logisch verbinden. Unsere Oracle 1z0-1104-25 Zertifizierungsantworten ermöglichen es Ihnen, mühelos die Prüfung zum ersten Mal zu bestehen. Zugleich können Sie auch viele wertvolle Zeit sparen.
