1Z0-1109-25 Valid Exam Tutorial - 1Z0-1109-25 Latest Exam Online

One of the few things that can't be brought back is the wasted time, so don't waste your precious time and get your Oracle practice test in time by our latest 1Z0-1109-25 exam questions from our online test engine. You will be able to clear your 1Z0-1109-25 Real Exam with our online version providing exam simulation. Your goal is very easy to accomplish and 100% guaranteed.

Oracle Cloud Infrastructure 2025 DevOps Professional Sample Questions (Q16-Q21):

NEW QUESTION # 16

How can system administrators ensure that only signed images from Oracle Cloud Infrastructure Registry are deployed to a Container Engine for Kubernetes cluster?

- A. By manually inspecting each image before deployment
- B. By disabling access to the Container Engine for Kubernetes cluster
- C. By configuring an image verification policy for the cluster
- D. By encrypting the images using a custom encryption algorithm

Answer: C

Explanation:

Image verification policies are used to ensure that only trusted and signed images are deployed to an Oracle Kubernetes Engine (OKE) cluster. By configuring such policies, administrators can enforce that images must be signed and come from trusted sources,

such as the Oracle Cloud Infrastructure Registry.

NEW QUESTION # 17

As an engineer building and deploying applications using an OCI DevOps project, which two capabilities can help ensure the security and reliability of the code in the build and deployment pipelines? (Choose two.)

- A. Using third-party tools like Sonatype, SonarQube, or OverOps to analyze code for security defects or bugs in code quality
- B. Using third-party tools like Ansible, Terraform, or OverOps to analyze code for security defects or bugs in code quality
- C. Using version control tools like Git or SVN to track and manage changes in the codebase
- D. Using Application Dependency Management (ADM) to identify security weaknesses in software applications by checking their dependencies
- E. Using JIRA to track user stories and bug fixes in the development process

Answer: A,D

Explanation:

Application Dependency Management (ADM) is a tool used to identify security weaknesses in software applications by analyzing their dependencies. Dependencies can often introduce vulnerabilities, and managing them properly is a critical part of ensuring application security.

Third-party tools like Sonatype and SonarQube can be used to analyze code for security defects or bugs in code quality. These tools help in identifying vulnerabilities, code smells, and other issues, which can improve the overall security and reliability of the code during the build process.

NEW QUESTION # 18

You're using Oracle Cloud Infrastructure (OCI) DevOps to automate your application deployment for frequent releases. In one of your automation steps, you'll create a deployment pipeline.

What does this deployment pipeline do in OCI DevOps?

- A. It is a set of stages for your build process for building, testing and compiling software artifacts.
- B. It takes a commit ID from your source code repositories and uses that source code to run your build instructions.
- C. It is used to store, manage, develop source code with OCI DevOps Code Repositories.
- D. It is a sequence of steps for delivering and deploying your artifacts to a target environment.

Answer: D

Explanation:

A deployment pipeline in OCI DevOps is used to automate the deployment of application artifacts to a target environment. It is a sequence of stages that includes steps such as approvals, traffic shifts, manual interventions, and the actual deployment of the artifacts to environments like Kubernetes clusters or compute instances.

NEW QUESTION # 19

As a DevOps engineer at XYZ Corp, you have been assigned the task of setting up a new OKE (Oracle Kubernetes Engine) cluster to manage the organization's Kubernetes applications hosted on Oracle Cloud Infrastructure (OCI). Your goal is to ensure a smooth and efficient process while preparing for the cluster creation.

Which of the following statements is false regarding the preparation process for setting up a new OKE cluster?

- A. Container Engine for Kubernetes cannot utilize existing network resources for the creation of the new cluster.
- B. It is necessary to ensure sufficient quota on different resource types in your OCI tenancy for the cluster setup.
- C. Container Engine for Kubernetes automatically creates and configures new network resources for the new cluster.
- D. Access to an Oracle Cloud Infrastructure tenancy is required to set up the new OKE cluster.

Answer: A

Explanation:

This statement is false because Container Engine for Kubernetes (OKE) can utilize existing network resources such as Virtual Cloud Networks (VCNs), subnets, security lists, and route tables for the creation of a new cluster. You can either use pre-existing network resources or let OKE create new network resources automatically.

NEW QUESTION # 20

As a DevOps engineer working on containerizing a microservices-based application to be hosted on OCI Cloud platforms, which step can help ensure that the container images have not been modified after being pushed to Oracle Cloud Infrastructure Registry (OCIR)?

- A. Scanning the image upon ingestion and comparing the image size for changes
- B. Enabling scanning of container images stored in OCI Registry
- C. Signing the image using the Container Registry CLI and creating an image signature that associates the image with the master encryption key and key version in the Vault service
- D. Deploying a manifest to the Kubernetes cluster that references the container image and its unique hash

Answer: C

Explanation:

To ensure that container images have not been modified after being pushed to the Oracle Cloud Infrastructure Registry (OCIR), you should sign the image. This involves using the Container Registry CLI to create a digital signature for the image, which associates the image with a master encryption key and key version stored in the OCI Vault service. This signature can then be verified at the time of deployment, ensuring that the image has not been tampered with since it was signed.

NEW QUESTION # 21

.....

With the help of the Oracle 1Z0-1109-25 brain dumps and preparation material provided by ExamcollectionPass, you will be able to get 1Z0-1109-25 certified at the first attempt. Our experts have curated an amazing 1Z0-1109-25 exam guide for passing the 1Z0-1109-25 exam. You can get the desired outcome by preparing yourself from the 1Z0-1109-25 Exam Dumps material provided by ExamcollectionPass. We frequently update our 1Z0-1109-25 exam preparation material to reflect the latest changes in the 1Z0-1109-25 exam syllabus.
