

1z0-1110-25 New Cram Materials, Book 1z0-1110-25 Free

BONUS!!! Download part of FreeDumps 1z0-1110-25 dumps for free: <https://drive.google.com/open?id=1xfq14UQqxNv95Pu0LkToDjt2qvpiA9sc>

FreeDumps provides a clear and superior solutions for each Oracle 1z0-1110-25 Exam candidates. We provide you with the Oracle 1z0-1110-25 exam questions and answers. Our team of IT experts is the most experienced and qualified. Our test questions and the answer is almost like the real exam. This is really amazing. More importantly, the examination pass rate of FreeDumps is highest in the worldwide.

Oracle 1z0-1110-25 Exam Syllabus Topics:

Topic	Details
Topic 1	Implement End-to-End Machine Learning Lifecycle: This section evaluates the abilities of Machine Learning Engineers and includes an end-to-end walkthrough of the ML lifecycle within OCI. It involves data acquisition from various sources, data preparation, visualization, profiling, model building with open-source libraries, Oracle AutoML, model evaluation, interpretability with global and local explanations, and deployment using the model catalog.
Topic 2	Apply MLOps Practices: This domain targets the skills of Cloud Data Scientists and focuses on applying MLOps within the OCI ecosystem. It covers the architecture of OCI MLOps, managing custom jobs, leveraging autoscaling for deployed models, monitoring, logging, and automating ML workflows using pipelines to ensure scalable and production-ready deployments.

Topic 3	• Use Related OCI Services: This final section measures the competence of Machine Learning Engineers in utilizing OCI-integrated services to enhance data science capabilities. It includes creating Spark applications through OCI Data Flow, utilizing the OCI Open Data Service, and integrating other tools to optimize data handling and model execution workflows.
Topic 4	• Create and Manage Projects and Notebook Sessions: This part assesses the skills of Cloud Data Scientists and focuses on setting up and managing projects and notebook sessions within OCI Data Science. It also covers managing Conda environments, integrating OCI Vault for credentials, using Git-based repositories for source code control, and organizing your development environment to support streamlined collaboration and reproducibility.
Topic 5	• OCI Data Science - Introduction & Configuration: This section of the exam measures the skills of Machine Learning Engineers and covers foundational concepts of Oracle Cloud Infrastructure (OCI) Data Science. It includes an overview of the platform, its architecture, and the capabilities offered by the Accelerated Data Science (ADS) SDK. It also addresses the initial configuration of tenancy and workspace setup to begin data science operations in OCI.

Book Oracle 1z0-1110-25 Free, 1z0-1110-25 Pass4sure Study Materials

FreeDumps is a website engaged in the providing customer 1z0-1110-25 VCE Dumps and makes sure every candidates passing actual test easily and quickly. We have a team of IT workers who have rich experience in the study of Oracle dumps torrent and they check the updating of Oracle top questions everyday to ensure the accuracy of exam collection.

Oracle Cloud Infrastructure 2025 Data Science Professional Sample Questions (Q31-Q36):

NEW QUESTION # 31

A bike sharing platform has collected user commute data for the past 3 years. For increasing profitability and making useful inferences, a machine learning model needs to be built from the accumulated data. Which of the following options has the correct order of the required machine learning tasks for building a model?

- A. Data Access, Feature Exploration, Feature Engineering, Data Exploration, Modeling
- B. Data Access, Feature Exploration, Data Exploration, Feature Engineering, Modeling
- C. Data Access, Data Exploration, Feature Exploration, Feature Engineering, Modeling
- **D. Data Access, Data Exploration, Feature Engineering, Feature Exploration, Modeling**

Answer: D

Explanation:

Detailed Answer in Step-by-Step Solution:

* **Data Access:** The first step in any machine learning workflow is accessing the raw data. This involves retrieving the user commute data collected over the past 3 years from the bike-sharing platform's storage system.

* **Data Exploration:** Once data is accessed, it's explored to understand its structure, quality, and patterns (e.g., missing values, distributions). This step helps identify what preprocessing is needed.

* **Feature Engineering:** After understanding the data, features are created or transformed (e.g., commute duration, time of day) to improve model performance. This step precedes feature exploration because you need engineered features to analyze further.

* **Feature Exploration:** This involves analyzing the engineered features (e.g., correlation analysis, importance ranking) to refine them or select the most relevant ones for modeling.

* **Modeling:** Finally, the prepared data and features are used to train and evaluate a machine learning model.

Option C (Data Access, Data Exploration, Feature Engineering, Feature Exploration, Modeling) follows this logical sequence, aligning with standard ML workflows.

The correct order reflects the machine learning lifecycle as outlined in Oracle's OCI Data Science documentation. Data Access is the initial step to retrieve data, followed by Data Exploration to assess it (e.g., using OCI Data Science Notebook Sessions with tools like pandas). Feature Engineering transforms raw data into meaningful inputs, followed by Feature Exploration to analyze feature importance (e.g., using ADS SDK's correlation tools). Modeling is the final step where the model is built and trained. This sequence

is consistent with Oracle's recommended practices for building ML models in OCI Data Science (Reference: Oracle Cloud Infrastructure Data Science Service Documentation, "Machine Learning Lifecycle").

NEW QUESTION # 32

On which option do you set Oracle Cloud Infrastructure Budget?

- A. Compartments
- **B. Tenancy**
- C. Instances
- D. Free-form tags

Answer: B

Explanation:

Detailed Answer in Step-by-Step Solution:

* Objective: Determine where OCI budgets are set.

* Understand Budgets: Track spending across OCI resources.

* Evaluate Options:

* A: Compartments-Scoped within tenancy, not budget root.

* B: Instances-Specific resources, not budget scope.

* C: Tags-Filter costs, not budget setting.

* D: Tenancy-Top-level scope for budgets-correct.

* Reasoning: Budgets apply at tenancy, optionally filtered (e.g., by compartment).

* Conclusion: D is correct.

OCI documentation states: "Budgets are set at the tenancy level (D), with optional filters like compartments or tags to monitor spending." A, B, and C are sub-elements-only D is the primary scope per OCI's cost management.

Oracle Cloud Infrastructure Cost Management Documentation, "Setting Budgets".

NEW QUESTION # 33

You are a data scientist working for a manufacturing company. You have developed a forecasting model to predict the sales demand in the upcoming months. You created a model artifact that contained custom logic requiring third-party libraries. When you deployed the model, it failed to run because you did not include all the third-party dependencies in the model artifact. What file should be modified to include the missing libraries?

- A. score.py
- B. model_artifact_validate.py
- C. requirements.txt
- **D. runtime.yaml**

Answer: D

Explanation:

Detailed Answer in Step-by-Step Solution:

* Objective: Specify third-party libraries for model deployment.

* Understand Artifacts: runtime.yaml defines runtime; score.py handles logic.

* Evaluate Options:

* A: Not a standard file-incorrect.

* B: Inference code-not for dependencies.

* C: Defines conda env with dependencies-correct.

* D: Pip list-not used in OCI conda deployments.

* Reasoning: runtime.yaml points to a conda env with all libraries.

* Conclusion: C is correct.

OCI documentation states: "In runtime.yaml, specify the conda environment slug (e.g., ENVIRONMENT_SLUG: custom_env) containing all third-party libraries required by the model." score.py (B) is for logic, requirements.txt (D) isn't OCI-standard, and A doesn't exist-C fixes the issue.

Oracle Cloud Infrastructure Data Science Documentation, "Model Deployment - runtime.yaml".

NEW QUESTION # 34

Which activity is NOT a part of the machine learning life cycle?

- A. Modeling
- B. Data Access
- **C. Database Management**
- D. Model Deployment

Answer: C

Explanation:

Detailed Answer in Step-by-Step Solution:

- * Objective: Identify which activity isn't part of the ML lifecycle.
- * Define ML Lifecycle: Includes data access, preparation, modeling, evaluation, deployment, and monitoring.
- * Evaluate Options:
- * A: Database Management (e.g., DBA tasks) is IT-related, not specific to ML workflows.
- * B: Model Deployment (e.g., serving predictions) is a key ML phase-correctly included.
- * C: Modeling (e.g., training) is the core of ML-correctly included.
- * D: Data Access (e.g., retrieving data) is the first ML step-correctly included.
- * Reasoning: Database management supports infrastructure, not the ML process directly.
- * Conclusion: A is the outlier.

The OCI Data Science lifecycle includes "data access, exploration, feature engineering, modeling, deployment, and monitoring," per the documentation. Database Management (A) is a general IT task (e.g., optimizing Oracle DB), not an ML-specific activity, unlike B, C, and D, which are integral to OCI's ML pipeline.

Oracle Cloud Infrastructure Data Science Documentation, "Machine Learning Lifecycle Overview".

NEW QUESTION # 35

Triggering a PagerDuty notification as part of Monitoring is an example of what in the OCI Console?

- A. Rule
- **B. Action**
- C. Function
- D. Event

Answer: B

Explanation:

Detailed Answer in Step-by-Step Solution:

- * Objective: Classify a PagerDuty notification in OCI Monitoring.
- * Understand OCI Monitoring: Involves events, rules, and actions for notifications.
- * Evaluate Options:
- * A: Action-executes a response (e.g., notify PagerDuty) when triggered-correct.
- * B: Rule-defines conditions for triggering actions-precedes the action.
- * C: Function-serverless code, not directly tied to notifications.
- * D: Event-state change triggering a rule, not the notification itself.
- * Reasoning: The notification is the action taken after an event/rule-fits A.
- * Conclusion: A is correct.

OCI documentation states: "Actions in the Monitoring service execute responses, such as sending notifications to PagerDuty, when a rule's condition is met based on an event." Rules (B) set conditions, Functions (C) are unrelated, and Events (D) are triggers-only. Action (A) describes the notification step.

Oracle Cloud Infrastructure Monitoring Documentation, "Actions Overview".

NEW QUESTION # 36

.....

To help you learn with the newest content for the 1z0-1110-25 preparation materials, our experts check the updates status every day, and their diligent works as well as professional attitude bring high quality for our 1z0-1110-25 practice materials. You may doubt if you are newbie for our 1z0-1110-25 training engine, free demos are provided for your reference. The free demo of 1z0-1110-25 exam questions contains a few of the real practice questions, and you will love it as long as you download and check it.
