

1Z0-1111-25 Probesfragen - 1Z0-1111-25 Praxisprüfung

Die Freude, der Erfolg mitbringt, ist riesig. Wir hoffen, dass die anspruchsvolle Software von uns Ihnen das Freude des Bestehens der Oracle 1Z0-1111-25 mitbringen. Ihr Erfolg ist auch unsere Erfolg. Deshalb bemühen uns für Sie um Ihre Prüfungszertifizierung der Oracle 1Z0-1111-25. Wir tun unser Bestes, die Oracle 1Z0-1111-25 Prüfungsunterlagen zu herstellen und den allseitigen Kundendienst zu bieten.

Oracle 1Z0-1111-25 Prüfungsplan:

Thema	Einzelheiten
Thema 1	Centrally Manage and Visualize Log Data: This section assesses the abilities of Logging Analysts and Security Engineers in managing logs across an entire IT environment. It includes enabling log collection, creating connectors for log transitions, identifying log patterns, and visualizing logs for advanced analytics using OCI Logging Service.
Thema 2	Summarize OCI Observability and Management Services: This section evaluates the expertise of DevOps Engineers and IT Operations Managers in utilizing Oracle Cloud Infrastructure (OCI) Observability and Management services. It covers tools for monitoring, auditing, and managing cloud resources, emphasizing automation and machine learning-driven insights to optimize IT operations.
Thema 3	Respond to Cloud Resource Changes in Real-Time: This domain measures the skills of Event Managers and Integration Specialists in using OCI Events Service. It covers event structures, types, rules, and integration with other OCI services to respond effectively to resource changes and automate workflows.
Thema 4	Monitor Distributed Components of an Application Stack: This section measures the skills of Stack Monitoring Specialists and Cloud Administrators in using OCI Stack Monitoring. It covers discovering resources within application stacks, monitoring metrics across distributed components, and ensuring optimal performance through effective resource management.

Thema 5	• Monitor Cloud Environments with Metrics and Alarms: This section tests Oracle Cloud Operators' knowledge of configuring OCI Monitoring Service. It includes enabling metrics for resource monitoring, setting up alarms based on best practices, and responding to real-time changes in cloud environments to ensure system reliability.

1Z0-1111-25 Praxisprüfung & 1Z0-1111-25 Ausbildungsressourcen

Eine breite Vielzahl von Oracle 1Z0-1111-25 Prüfungsfragen und Antworten aus Fast2test sind logisch. Oracle 1Z0-1111-25 Zertifizierungsantworten aus Fast2test sind gleich wie die in der realen Prüfung. Vor dem Kauf der Oracle 1Z0-1111-25 Echte Fragen können Sie kostenlose Demo zum Teil auf der Website www.Fast2test.de herunterladen.

Oracle Cloud Infrastructure 2025 Observability Professional 1Z0-1111-25 Prüfungsfragen mit Lösungen (Q34-Q39):

34. Frage

What is the correct logging CLI syntax for the log search with a query for REST call responses having status code 400, within the web Log Group and the application Log?

- A. `oci logging-search search-logs --search-query 'search "ocid1.compartment.oc1..aaaaaaaawqegnjifhni77bqm625cxioavoq775jckfh2syxqtmglabcccdxyz/web/application" --time-start 2022-02-06T00:00:00Z --time-end 2022-02-07T00:00:00Z`
- B. `oci logging-search search-logs --search-query 'search "ocid1.compartment.oc1..aaaaaaaawqegnjifhni77bqm625cxioavoq775jckfh2syxqtmglabcccdxyz" | where data.statusCode 400' --time-start 2022-02-06T00:00:00Z --time-end 2022-02-07T00:00:00Z`
- C. `oci log search search-logs --loggroup "web" --log "application" --search-query 'search "ocid1.compartment.oc1..aaaaaaaawqegnjifhni77bqm625cxioavoq775jckfh2syxqtmglabcccdxyz" where data.statusCode = 400' --time-start 2022-02-06T00:00:00Z --time-end 2022-02-07T00:00:00Z`
- D. `oci logging-search search-logs --search-query 'search "ocid1.compartment.oc1..aaaaaaaawqegnjifhni77bqm625cxioavoq775jckfh2syxqtmglabcccdxyz/web/application" | where data.statusCode = 400' --time-start 2022-02-06T00:00:00Z --time-end 2022-02-07T00:00:00Z`

Antwort: D

Begründung:

The correct OCI CLI syntax for searching logs must include the compartment, log group, log, and query:

B: `oci logging-search search-logs --search-query 'search`

`"ocid1.compartment.oc1..aaaaaaaawqegnjifhni77bqm625cxioavoq775jckfh2syxqtmglabcccdxyz/web/application" | where data.statusCode = 400' --time-start 2022-02-06T00:00:00Z --time-end 2022-02-07T00:00:00Z` Specifies the compartment OCID, web Log Group, and application Log in the scope path.

Filters for `data.statusCode = 400` using proper syntax (`=` instead of `space`).

Includes valid UTC time range.

Why not A, C, or D?

A: Missing log group/log; incorrect filter syntax (`400` without `=`).

C: No filter for status code `400`.

D: Incorrect command (`oci log` instead of `oci logging-search`); redundant parameters.

B aligns with OCI Logging's search syntax.

35. Frage

Your on-premises private cloud environment consists of virtual machines hosting a set of application servers. These VMs are currently monitored using a 3rd party monitoring tool for resource metrics such as CPU and Memory utilization. You have created an automation workflow to transform these application servers into Oracle Cloud Infrastructure (OCI) which will deploy a set of new compute instances. There are a few requirements to consider while running this task: Ensure continuous monitoring is enabled, so the current monitored resource metrics are continuously collected and reported; Monitor the completion of Compute Instance deployment during the workflow and notify with email on each execution; Notify with email for any new OCI Object Storage

buckets created after the migration workflow. What solution would you recommend to achieve these requirements?

- A. Configure OCI Compute agent on on-premises VMs to collect required resource metrics. Use OCI Events service to track all deployments (com.oraclecloud.computeapi.launchinstance.end) with OCI Notifications service to track and report all changes occurring in the target environment.
- B. Configure OCI Compute agent on OCI compute instances to collect required resource metrics. Use OCI Events and Functions services to track the Instance deployment (com.oraclecloud.computeapi.launchinstance.end) and creation of new buckets (com.oraclecloud.objectstorage.createbucket). Use OCI Notifications and Events service to notify these changes.
- **C. Configure OCI Compute agent on on-premises VMs and OCI compute instances to collect required resource metrics. Use OCI Events service to track the end-to-end deployment process (com.oraclecloud.computeapi.launchinstance.end) and creation of new bucket (com.oraclecloud.objectstorage.createbucket). Use OCI Notifications and Events services to notify these changes.**
- D. Configure both 3rd party monitoring tool and OCI Compute Agent on OCI compute instances to collect required resource metrics. Use OCI Events service (com.oraclecloud.computeapi.launchinstance.end) with Notifications service to track and notify all changes occurring in the target OCI environment.

Antwort: C

Begründung:

The solution must address continuous monitoring and event-driven notifications:

D:

OCI Compute agent on on-premises VMs and OCI instances: Ensures metric continuity (e.g., CPU, memory) across the migration, using Management Agents for both environments.

Events service: Tracks launchinstance.end for deployment completion and createbucket for new buckets.

Notifications and Events: Sends email alerts for these events.

Why not A, B, or C?

A: Misses on-premises monitoring continuity.

B: Lacks bucket creation tracking.

C: Redundant 3rd-party tool use; OCI agents suffice.

D provides end-to-end coverage.

36. Frage

Which two features are provided by Application Performance Monitoring? (Choose two.)

- A. Capacity Planning
- **B. Distributed Tracing**
- **C. Real User Monitoring**
- D. Java Management

Antwort: B,C

Begründung:

OCI Application Performance Monitoring (APM) provides tools to monitor application performance:

Distributed Tracing (A): Tracks requests across microservices, showing latency and dependencies via traces and spans.

Real User Monitoring (C): Captures real user interactions with web applications (e.g., page load times) using a Browser Agent.

Why not B or D?

Capacity Planning (B): Available in Operations Insights, not APM.

Java Management (D): Not a feature of APM; Java Agent is a tool, not a feature.

These features align with APM's focus on performance and user experience.

37. Frage

Which TWO actions can be performed using the Database Management Service in Oracle Cloud Infrastructure (OCI)? (Choose two.)

- A. Forecast capacity issues of your Database services in OCI
- **B. Compare database performance across different time periods or perform real-time monitoring of SQL statements**
- **C. Analyze and tune SQL performance issues of Oracle Databases on-premises, OCI, and multi-cloud environments**
- D. Forecast capacity issues of Oracle Databases in on-premises, OCI, and multi-cloud environments

Antwort: B,C

Begründung:

Database Management Service provides advanced database oversight:

Compare database performance across different time periods or perform real-time monitoring of SQL statements (C): Uses Performance Hub for historical and real-time SQL monitoring.

Analyze and tune SQL performance issues of Oracle Databases on-premises, OCI, and multi-cloud environments (D): Offers SQL tuning across diverse deployments.

Why not A or B?

A and B: Capacity forecasting is an Operations Insights feature, not Database Management.

These actions enhance database performance management.

38. Frage

Which is one of the primary use cases for the Oracle Cloud Infrastructure (OCI) Observability and Management (O&M) Logging Analytics service?

- **A. Monitor, aggregate, index, and analyze log data**
- B. Create OCI resources automatically based on log events and reports
- C. Centralize and relocate any log based on a subscription model

Antwort: A

Begründung:

Logging Analytics is a core O&M service:

Monitor, aggregate, index, and analyze log data (A): Collects logs from OCI and external sources, indexes them for search, and provides analytics (e.g., clustering) to monitor and troubleshoot systems.

Why not B or C?

B: Log centralization occurs, but "subscription model" isn't a feature.

C: Resource creation is an Events Service use case, not Logging Analytics.

This is its primary observability role.

39. Frage

.....

Fast2test hat ein professionelles IT-Team, das sich mit der Forschung der Fragen und Antworten zur Oracle 1Z0-1111-25 Zertifizierungsprüfung beschäftigt und Ihnen sehr effektive Prüfungsunterlagen und Online-Dienste bietet. Wenn Sie Fast2test Produkte kaufen, wird Fast2test Ihnen mit den neulich aktualisierten, sehr detaillierten Schulungsunterlagen von bester Qualität und genaue Prüfungsfragen und Antworten zur Verfügung stellen. So können Sie sich ganz unbesorgt auf Ihre Oracle 1Z0-1111-25 Zertifizierungsprüfung vorbereiten. Benutzen Sie ganz beruhigt unsere Fast2test Produkte. Sie können 100% die 1Z0-1111-25 Prüfung erfolgreich ablegen.
