

1Z0-1111-25 Real Exam & 1Z0-1111-25 Test Questions

BTW, DOWNLOAD part of PDFTorrent 1Z0-1111-25 dumps from Cloud Storage: https://drive.google.com/open?id=1B4pz_2iytk5vOmPBaN008o8EhlGS3ZIX

To develop a new study system needs to spend a lot of manpower and financial resources, first of all, essential, of course, is the most intuitive skill learning materials, to some extent this greatly affected the overall quality of the learning materials. Our Oracle Cloud Infrastructure 2025 Observability Professional study training dumps do our best to find all the valuable reference books, then, the product we hired experts will carefully analyzing and summarizing the related materials, such as: Oracle 1Z0-1111-25 exam, eventually form a complete set of the review system. Experts before starting the compilation of "the 1Z0-1111-25 Latest Questions", has put all the contents of the knowledge point build a clear framework in mind, though it needs a long wait, but product experts and not give up, but always adhere to the effort, in the end, they finished all the compilation. So, you're lucky enough to meet our 1Z0-1111-25 test guide I, and it's all the work of the experts. If you want to pass the qualifying exam with high quality, choose our products. We are absolutely responsible for you. Don't hesitate!

Oracle 1Z0-1111-25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Centrally Manage and Visualize Log Data: This section assesses the abilities of Logging Analysts and Security Engineers in managing logs across an entire IT environment. It includes enabling log collection, creating connectors for log transitions, identifying log patterns, and visualizing logs for advanced analytics using OCI Logging Service.
Topic 2	<ul style="list-style-type: none">Monitor Applications with Deep Visibility into End-User Experience: This domain tests the knowledge of Application Performance Engineers and DevOps Specialists in using OCI Application Performance Monitoring (APM). It includes instrumenting applications for data collection, analyzing performance metrics, visualizing distributed application components, and diagnosing issues across multi-tier architectures.

Topic 3	<ul style="list-style-type: none"> • Define the Pillars of Observability: This section of the exam measures the skills of Cloud Architects and Site Reliability Engineers (SREs) in understanding the three pillars of observability: logs, metrics, and traces. It explains how these components provide insights into system health and performance, enabling effective monitoring and troubleshooting in distributed cloud environments.
Topic 4	<ul style="list-style-type: none"> • Summarize OCI Observability and Management Services: This section evaluates the expertise of DevOps Engineers and IT Operations Managers in utilizing Oracle Cloud Infrastructure (OCI) Observability and Management services. It covers tools for monitoring, auditing, and managing cloud resources, emphasizing automation and machine learning-driven insights to optimize IT operations.
Topic 5	<ul style="list-style-type: none"> • Monitor Distributed Components of an Application Stack: This section measures the skills of Stack Monitoring Specialists and Cloud Administrators in using OCI Stack Monitoring. It covers discovering resources within application stacks, monitoring metrics across distributed components, and ensuring optimal performance through effective resource management.

Oracle 1Z0-1111-25 Exam Dumps Offers Exam Passing Money Back Guarantee

It has a lot of advantages. Giving yourself more time to prepare for the Oracle 1Z0-1111-25 exam questions using it will allow you to obtain your 1Z0-1111-25 certification. It is one of the major reasons many people prefer buying Oracle Cloud Infrastructure 2025 Observability Professional 1Z0-1111-25 Exam Dumps preparation material. It was designed by the best Oracle Exam Questions who took the time to prepare it.

Oracle Cloud Infrastructure 2025 Observability Professional Sample Questions (Q35-Q40):

NEW QUESTION # 35

Which are the different data sources from where the Application Performance Monitoring (APM) Java agent can collect spans and metrics data?

- A. WebLogic, Tomcat, or JBoss
- B. VMware ESXi
- C. Jaeger or Zipkin
- D. NginX

Answer: C

Explanation:

The APM Java Agent collects telemetry from Java applications:

Jaeger or Zipkin (C): These are open-source distributed tracing systems. The Java Agent can integrate with Jaeger- or Zipkin-compatible applications, collecting spans and metrics for APM analysis.

Why not A, B, or D?

NginX (A): A web server; APM uses other agents (e.g., Browser Agent) for such systems.

WebLogic, etc. (B): Application servers, but not direct data sources; the agent collects from the app, not the server type.

VMware ESXi (D): A hypervisor, unrelated to Java tracing.

Jaeger and Zipkin compatibility extends APM's reach.

NEW QUESTION # 36

What is enabled by the SQL Warehouse application within Operations Insights?

- A. Insights into the SQL performance
- B. Consolidated Databases
- C. Reduced Operations costs

- D. Trend and Forecast resource requirements

Answer: A

Explanation:

The SQL Warehouse in Operations Insights focuses on SQL-level analysis:

Insights into the SQL performance (A): Provides a centralized repository of SQL performance data (e.g., execution time, resource usage) from monitored databases, enabling detailed analysis and optimization.

Why not B, C, or D?

Trend and Forecast (B): Handled by Capacity Planning in Operations Insights, not SQL Warehouse.

Consolidated Databases (C): A misnomer; it's about data, not database consolidation.

Reduced costs (D): An outcome, not a direct feature.

SQL Warehouse enhances database performance visibility.

NEW QUESTION # 37

There are several ways to reduce Logging Analytics noise. Select the TWO options that apply. (Choose two.)

- A. Use parsed logs search
- B. Use histogram records
- C. Use specific keywords
- D. Use time-picker to limit the volume of logs

Answer: A,D

Explanation:

Reducing noise in Logging Analytics improves log analysis focus:

Use parsed logs search (C): Searches based on extracted fields (e.g., severity=ERROR) filter out irrelevant logs, targeting specific issues.

Use time-picker to limit the volume of logs (D): Narrows the time range (e.g., last hour), reducing the dataset to relevant periods.

Why not A or B?

Histogram records (A): Visualizes data distribution, not a noise reduction method.

Specific keywords (B): Useful but less precise than parsed fields; raw text search isn't emphasized in Logging Analytics.

These methods enhance signal-to-noise ratio.

NEW QUESTION # 38

What are two examples of a Stack Monitoring deployment model? (Choose two.)

- A. Resources running on OCI compute instances
- B. Resources running on a network appliance
- C. Resources running on-premises
- D. Resources running on Management Gateway

Answer: A,C

Explanation:

Stack Monitoring monitors application stacks across environments:

Resources running on OCI compute instances (B): Monitors components (e.g., WebLogic, databases) on OCI VMs using Management Agents.

Resources running on-premises (D): Tracks on-premises resources (e.g., Oracle Databases) via Enterprise Manager Bridge or agents.

Why not A or C?

A: Management Gateway is a proxy, not a resource host.

C: Network appliances aren't typical Stack Monitoring targets.

These models cover cloud and on-premises stacks.

NEW QUESTION # 39

Your team has been tasked with debugging a Cloud Native application developed using the following Oracle Cloud Infrastructure (OCI) services: Object Storage, Events, Functions, API Gateway, and Autonomous Database. Which of these is NOT a valid

option for troubleshooting issues in OCI?

- A. View service metric information from the OCI Monitoring service.
- **B. Leverage OCI Cloud Guard to extract and visualize debug logs generated by your application.**
- C. Configure the application to send logs into OCI Logging service.
- D. Configure a Service Connector to automatically send logs into the OCI Logging Analytics service.
- E. Trace performance issues in OCI Application Performance Monitoring service by enabling Function traces.

Answer: B

Explanation:

Troubleshooting a cloud-native app leverages OCI observability tools:

Invalid: Leverage OCI Cloud Guard to extract and visualize debug logs (D): Cloud Guard is a security posture management and threat detection service, not designed for extracting or visualizing application debug logs.

Why A, B, C, and E are valid:

A: Monitoring provides service metrics (e.g., Function invocation latency).

B: Service Connector moves logs to Logging Analytics for analysis.

C: APM traces Functions performance issues.

E: Logging Service collects app logs directly.

Cloud Guard focuses on security, not debugging.

NEW QUESTION # 40

.....

Oracle 1Z0-1111-25 certification exam is among those popular IT certifications. It is also the dream of ambitious IT professionals. This part of the candidates need to be fully prepared to allow them to get the highest score in the 1Z0-1111-25 Exam, make their own configuration files compatible with market demand.
