

1Z0-1111-25 Training Solutions, Answers 1Z0-1111-25 Real Questions

BTW, DOWNLOAD part of Actual4Labs 1Z0-1111-25 dumps from Cloud Storage: <https://drive.google.com/open?id=1fptLwpmnv8erxqNrOPtWg9lKZmSiHlfY>

Success does not come only from the future, but it continues to accumulate from the moment you decide to do it. At the moment you choose 1Z0-1111-25 practice quiz, you have already taken the first step to success. The next thing you have to do is stick with it. 1Z0-1111-25 Training Materials will definitely live up to your expectations. Not only our 1Z0-1111-25 study materials contain the latest exam questions and answers, but also the pass rate is high as 98% to 100%.

Oracle 1Z0-1111-25 Exam Syllabus Topics:

Topic	Details
Topic 1	Centrally Manage and Visualize Log Data: This section assesses the abilities of Logging Analysts and Security Engineers in managing logs across an entire IT environment. It includes enabling log collection, creating connectors for log transitions, identifying log patterns, and visualizing logs for advanced analytics using OCI Logging Service.
Topic 2	Respond to Cloud Resource Changes in Real-Time: This domain measures the skills of Event Managers and Integration Specialists in using OCI Events Service. It covers event structures, types, rules, and integration with other OCI services to respond effectively to resource changes and automate workflows.
Topic 3	Monitor Applications with Deep Visibility into End-User Experience: This domain tests the knowledge of Application Performance Engineers and DevOps Specialists in using OCI Application Performance Monitoring (APM). It includes instrumenting applications for data collection, analyzing performance metrics, visualizing distributed application components, and diagnosing issues across multi-tier architectures.

Topic 4	Define the Pillars of Observability: This section of the exam measures the skills of Cloud Architects and Site Reliability Engineers (SREs) in understanding the three pillars of observability: logs, metrics, and traces. It explains how these components provide insights into system health and performance, enabling effective monitoring and troubleshooting in distributed cloud environments.
Topic 5	Distinguish the Key Concepts of Logging Analytics: This section evaluates the expertise of Data Analysts and Troubleshooting Specialists in using OCI Logging Analytics. It covers log ingestion methods, searching and filtering logs, performing advanced analytics, and leveraging machine learning-powered insights for proactive issue resolution.

Answers 1Z0-1111-25 Real Questions, Pdf 1Z0-1111-25 Dumps

PDF version of 1Z0-1111-25 exam questions - being legible to read and remember, support customers' printing request, and allow you to have a print and practice in papers. Software version of 1Z0-1111-25 guide dump - supporting simulation test system, with times of setup has no restriction. Remember this version support Windows system users only. App online version of 1Z0-1111-25 Guide dump -Being suitable to all kinds of equipment or digital devices, supportive to offline exercises on the condition that you practice it without mobile data. Boggled down in review process right now, our 1Z0-1111-25 training materials with three versions can help you gain massive knowledge.

Oracle Cloud Infrastructure 2025 Observability Professional Sample Questions (Q45-Q50):

NEW QUESTION # 45

Which of the following statements is NOT valid regarding Management Agent Cloud Service?

- **A. Management Agent Cloud Service allows OCI services to collect data from on-premises and cloud assets, except that it can only transport data into AWS or GCS.**
- B. Management Agent Cloud Service is self-monitored.
- C. Management Agent Cloud Service enables on-demand execution of operations against monitored resources.
- D. Management Agent Cloud Service transports customer data to Logging Analytics, OCI Monitoring, or even a custom endpoint hosted in OCI.

Answer: A

Explanation:

The Management Agent Cloud Service collects and transports data from resources to OCI services. Let's evaluate:

Invalid statement: Can only transport data into AWS or GCS (A): This is false. Management Agents transport data to OCI services (e.g., Logging Analytics, Monitoring) or custom OCI endpoints, not AWS or Google Cloud Storage (GCS).

Why B, C, and D are valid:

Self-monitored (B): Agents monitor their own health and report to OCI.

Transports to OCI services (C): Supports Logging Analytics, Monitoring, and custom OCI endpoints.

On-demand operations (D): Allows tasks like metric collection or log uploads on demand.

Management Agents are OCI-centric, not limited to external clouds.

NEW QUESTION # 46

Which response contains rich information to process for analytics?

- **A. Database Audit Logs**
- B. Logging Analytic Entities
- C. Log Sources
- D. Entity types

Answer: A

Explanation:

For analytics, the data source must provide detailed, actionable information.

Database Audit Logs (C): These logs contain rich data like user actions, SQL queries, timestamps, and security events, making them ideal for performance, security, and compliance analysis in Logging Analytics.

Why not A, B, or D?

Entity types (A): These are metadata definitions, not data for analytics.

Log Sources (B): These are configurations for log parsing, not the logs themselves.

Logging Analytic Entities (D): Entities are resource representations, not the data content.

Database Audit Logs offer the depth needed for meaningful insights.

NEW QUESTION # 47

Which pillars of Observability are available as a single view from the Dashboard?

- A. Compute, Storage, and Network
- **B. Logs, Metrics, and Traces**
- C. Log data, Query language, Dashboard widgets
- D. Logging Analytics, Database Management, Stack Monitoring

Answer: B

NEW QUESTION # 48

Which TWO actions can be performed using the Database Management Service in Oracle Cloud Infrastructure (OCI)? (Choose two.)

- **A. Analyze and tune SQL performance issues of Oracle Databases on-premises, OCI, and multi-cloud environments**
- B. Forecast capacity issues of Oracle Databases in on-premises, OCI, and multi-cloud environments
- C. Forecast capacity issues of your Database services in OCI
- **D. Compare database performance across different time periods or perform real-time monitoring of SQL statements**

Answer: A,D

Explanation:

Database Management Service provides advanced database oversight:

Compare database performance across different time periods or perform real-time monitoring of SQL statements (C): Uses Performance Hub for historical and real-time SQL monitoring.

Analyze and tune SQL performance issues of Oracle Databases on-premises, OCI, and multi-cloud environments (D): Offers SQL tuning across diverse deployments.

Why not A or B?

A and B: Capacity forecasting is an Operations Insights feature, not Database Management.

These actions enhance database performance management.

NEW QUESTION # 49

Which two are use cases of Oracle Cloud Infrastructure (OCI) Events Service? (Choose two.)

- A. Perform configuration management for deploying, configuring, and managing servers
- B. Migrate Events generated by OCI resources from a Source to Target services
- **C. Perform cleanup tasks when an OCI resource is terminated**
- **D. Process files when they are uploaded in an Object Storage bucket**

Answer: C,D

Explanation:

The OCI Events Service enables event-driven automation by reacting to changes in OCI resources. Two valid use cases are:

Process files when they are uploaded in an Object Storage bucket (A): You can create an event rule to trigger an action (e.g., invoking an Oracle Function) when an object is created (com.oraclecloud.objectstorage.createobject). The function could process the file (e.g., image resizing).

Perform cleanup tasks when an OCI resource is terminated (B): An event rule can detect resource termination (e.g., com.oraclecloud.computeapi.terminateinstance.end) and trigger a function to clean up associated resources (e.g., delete volumes).

Migrate Events (C): Events Service doesn't "migrate" events; it triggers actions. Migration is more aligned with Service Connector Hub.

These use cases showcase the service's ability to automate workflows based on resource state changes.
