NEW QUESTION # 14
In which three cases would you need a Visual Builder service instance to deploy your app to? (Choose three.)

- A. When there is an application that is accessible from a vanity URL (custom domain)
- B. For gaining access to Oracle Fusion Apps REST services
- C. When the app needs to be accessed by users who do not have Fusion Apps access
- D. For gaining access to an external database through a REST service requiring basic auth
- E. For enabling the app to be integrated into the Fusion Cloud Apps menu

Answer: A,C,D

Explanation:
Full Detailed in Depth Explanatio n:
A Visual Builder (VB) service instance is a stand-alone runtime environment separate from Fusion Apps. Option A is correct because external users without Fusion access require a VB instance to host the app. Option B is valid as VB instances support REST integrations with external databases using basic authentication. Option C is accurate because vanity URLs are supported by VB instances for custom domains. Option D is incorrect because Fusion Apps REST services are typically accessed via AppUI extensions within Fusion, not a separate VB instance. Option E is wrong as integration into Fusion menus relies on AppUI extensions, not a stand-alone VB instance.

NEW QUESTION # 15
You are designing the UI to display information about a product and are asked to use the card layout, such that:

* The card layout is used as an entry point from where users can access additional details.
Which card layout is suitable for the above requirements?

- A. Scoreboard
- B. Object Card
- C. Mini Card
- D. Image Card

Answer: B

Explanation:
Full Detailed in Depth Explanatio n:
Redwood offers various card layouts, each with specific use cases. The Object Card (Option A) is designed to summarize key information about an entity (e.g., a product) in a compact, visually appealing way while serving as an entry point to detailed views-perfectly matching the requirements. Mini Card (B) is too minimal for summarization, focusing on quick glances. Image Card (C) prioritizes visuals over data summary, and Scoreboard (D) is for metrics/KPIs, not product details.
