Oracle Cloud Infrastructure 2025 AI Foundations Associate Sample Questions (Q32-Q37):

NEW QUESTION # 32

What is the primary purpose of reinforcement learning?

- A. Finding relationships within data sets
- B. Identifying patterns in data
- C. Learning from outcomes to make decisions
- D. Making predictions from labeled data

Answer: C

Explanation:

Reinforcement learning (RL) is a type of machine learning where an agent learns to make decisions by taking actions in an environment to achieve a certain goal. The agent receives feedback in the form of rewards or penalties based on the outcomes of its actions, which it uses to learn and improve its decision-making over time. The primary purpose of reinforcement learning is to enable the agent to learn optimal strategies by interacting with its environment, thereby maximizing cumulative rewards. This approach is commonly used in areas such as robotics, game playing, and autonomous systems.

NEW QUESTION # 33

Which is NOT a category of pretrained foundational models available in the OCI Generative AI service?

- A. Generation models
- B. Translation models
- C. Embedding models
- D. Chat models

Answer: B

Explanation:

The OCI Generative AI service offers various categories of pretrained foundational models, including Embedding models, Chat models, and Generation models. These models are designed to perform a wide range of tasks, such as generating text, answering questions, and providing contextual embeddings. However, Translation models, which are typically used for converting text from one language to another, are not a category available in the OCI Generative AI service's current offerings. The focus of the OCI Generative AI service is more aligned with tasks related to text generation, chat interactions, and embedding generation rather than direct language translation.

NEW QUESTION # 34

What is the purpose of Attention Mechanism in Transformer architecture?

- A. Break down a sentence into smaller pieces called tokens.
- B. Weigh the importance of different words within a sequence and understand the context.
- C. Convert tokens into numerical forms (vectors) that the model can understand.
- D. Apply a specific function to each word individually.

Answer: B

Explanation:

The purpose of the Attention Mechanism in Transformer architecture is to weigh the importance of different words within a sequence

and understand the context. In essence, the attention mechanism allows the model to focus on specific parts of the input sequence when producing an output, which is crucial for understanding context and maintaining coherence over long sequences. It does this by assigning different weights to different words in the sequence, enabling the model to capture relationships between words that are far apart and to emphasize relevant parts of the input when generating predictions.

NEW QUESTION # 35

What key objective does machine learning strive to achieve?

- **A. Enabling computers to learn and improve from experience**
- B. Explicitly programming computers
- C. Creating algorithms to solve complex problems
- D. Improving computer hardware

Answer: A

Explanation:

The key objective of machine learning is to enable computers to learn from experience and improve their performance on specific tasks over time. This is achieved through the development of algorithms that can learn patterns from data and make decisions or predictions without being explicitly programmed for each task. As the model processes more data, it becomes better at understanding the underlying patterns and relationships, leading to more accurate and efficient outcomes.

NEW QUESTION # 36

What can Oracle Cloud Infrastructure Document Understanding NOT do?

- A. Extract text from documents
- B. Extract tables from documents
- **C. Generate transcript from documents**
- D. Classify documents into different types

Answer: C

Explanation:

Oracle Cloud Infrastructure (OCI) Document Understanding service offers several capabilities, including extracting tables, classifying documents, and extracting text. However, it does not generate transcripts from documents. Transcription typically refers to converting spoken language into written text, which is a function associated with speech-to-text services, not document understanding services. Therefore, generating a transcript is outside the scope of what OCI Document Understanding is designed to do .
