Oracle Cloud Infrastructure 2025 Migration Architect Professional Sample Questions (Q51-Q56):

NEW QUESTION # 51

Your company is planning to decommission their on-premises data center hosting a set of Virtual Machines (VMs) that heavily rely on VMware technologies. The goal is to migrate those VMs into OCI, make this transition as quick as possible, ensuring the environment is highly available and can be controlled by the company after the migration. What are the two advantages of using Oracle Cloud VMware Solution (OCVS)?

- A. The company can bring their own product licenses (BYOL) for VMware products such as vSphere, vSAN, and NSX
- B. The company could convert all of VMware-based applications into native OCI Compute instances
- C. The company can free up their IT team as Oracle takes over the management, including updates and patching of the OCVS environment
- D. The company can control root access to the OCVS environment
- E. The company can move those application VMs into OCVS "as-is"

Answer: A,E

Explanation:

Two key advantages of using OCVS are the ability to bring your own licenses (BYOL) for VMware products, and the ability to move application VMs "as-is," minimizing the need for modifications.

NEW QUESTION # 52

What is a valid purpose for creating multiple Migration Plans for each Migration Project in Oracle Cloud Migrations?

- A. To incrementally increase the allocated budget for each Migration Plan
- B. To accelerate the migration task by assigning each Migration Plan to the respective migration team
- C. To create a backup from the existing Migration Plan, as a precautionary measure against misconfiguration

- D. To validate different compute shapes for each VM ensuring the most effective configuration can be chosen

Answer: D

Explanation:

Creating multiple Migration Plans for each Migration Project allows for the validation of different compute shapes for each VM. This ensures that the most effective configuration can be chosen based on the specific requirements of each workload, leading to optimized performance and resource utilization in the Oracle Cloud Migration.

NEW QUESTION # 53

What capability does Oracle Cloud Infrastructure (OCI) Storage Gateway provide for connecting on-premises applications with OCI Object Storage?

- A. It enables seamless integration with on-premises databases for real-time data synchronization
- B. It enables seamless integration with OCI Block Volumes for real-time data synchronization
- C. It provides a bridge for applications to write data to OCI Object Storage using NFS protocol but requires application modification to uptake the REST APIs
- D. It provides a bridge for applications to write data to OCI Object Storage using NFS protocol, without requiring modifications to the applications for REST API integration

Answer: D

Explanation:

OCI Storage Gateway allows applications to write data to OCI Object Storage using the NFS protocol without needing to modify the applications for REST API integration. This simplifies the process of connecting on-premises applications with OCI Object Storage.

NEW QUESTION # 54

As part of your organization's initiative to migrate on-premises workloads to Oracle Cloud Infrastructure using Oracle Cloud Migrations (OCM) service, you have been tasked to understand the end-to-end migration workflow. Which sequence correctly represents the stages in the OCM migration workflow?

- A. Discovery, Assessment and Planning, Inventory, Execution, Replication
- B. Assessment and Planning, Replication, Discovery, Inventory, Execution
- C. Discovery, Inventory, Assessment and Planning, Replication, Execution
- D. Assessment and Planning, Discovery, Inventory, Replication, Execution

Answer: C

Explanation:

This sequence is correct as it follows the correct order of stages in the OCM migration workflow: Discovery, Inventory, Assessment and Planning, Replication, and finally Execution.

NEW QUESTION # 55

You are working as a migration cloud architect in an organization where you are responsible for cloud migrations from an on-premises data center. This environment consists of VMware and KVM infrastructures, both hosting a set of production application workloads. As part of a migration process, you are tasked with identifying appropriate methods for migrating workloads from both source environments into Oracle Cloud VMware Solution (OCVS). The application owners would like to validate the VMs after the migration and before switching over those workloads to production. Which two migration types can be used?

- A. HCX OS Assisted Replication
- B. Oracle Cloud Migrations service
- C. HCX Bulk Migration
- D. Block Volume Replication
- E. HCX vMotion

Answer: C,E

HCX Bulk Migration and HCX vMotion are suitable methods for migrating workloads from VMware and KVM infrastructures to Oracle Cloud VMware Solution (OCVS). Bulk Migration allows for bulk migration of VMs, and vMotion allows live migration without downtime, both enabling VM validation before finalizing migration.
