Oracle Cloud Infrastructure 2025 Migration Architect Professional Sample Questions (Q38-Q43):

NEW QUESTION # 38

How does containerization differ from virtualization in terms of resource optimization?

- A. Containers require a full operating system to run, whereas virtual machines share a single operating system
- **B. Containerization allows for more efficient utilization of hardware resources by sharing the host operating system**
- C. Virtualization offers more flexibility in terms of application dependencies
- D. Virtualization maximizes efficiency by running multiple applications on the same OS kernel

Answer: B

Explanation:

Containerization allows for more efficient utilization of hardware resources by sharing the host operating system. Containers only package the application and its dependencies, running on top of the host OS without the need for a separate guest OS.

NEW QUESTION # 39

Which three transfer mediums does the OCI Database Migration service use to perform the initial load of the databases?

- **A. Data Pump via network link**
- B. Data Guard via replication
- C. Data Pump via File Storage
- **D. Data Pump dump upload via OCI CLI**
- **E. Data Pump via Object Storage**

Answer: A,D,E

Explanation:

Data Pump via Object Storage, Data Pump via network link, and Data Pump dump upload via OCI CLI are all valid transfer mediums used by the OCI Database Migration service for the initial load of databases.

NEW QUESTION # 40

Your company is planning to decommission their on-premises data center hosting a set of Virtual Machines (VMs) that heavily rely on VMware technologies. The goal is to migrate those VMs into OCI, make this transition as quick as possible, ensuring the environment is highly available and can be controlled by the company after the migration. What are the two advantages of using Oracle Cloud VMware Solution (OCVS)?

- A. The company can free up their IT team as Oracle takes over the management, including updates and patching of the OCVS environment
- B. The company could convert all of VMware-based applications into native OCI Compute instances
- **C. The company can move those application VMs into OCVS "as-is"**
- **D. The company can bring their own product licenses (BYOL) for VMware products such as vSphere, vSAN, and NSX**
- E. The company can control root access to the OCVS environment

Answer: C,D

Explanation:

Two key advantages of using OCVS are the ability to bring your own licenses (BYOL) for VMware products, and the ability to move application VMs "as-is," minimizing the need for modifications.

NEW QUESTION # 41

As a migration architect, you are tasked with transferring objects across buckets within the same region and to buckets in different regions. Which feature of Oracle Cloud Infrastructure (OCI) Object Storage should you utilize to accomplish this data migration?

- A. Object Transition
- **B. Object Copy**
- C. Object Move
- D. Object Mirroring

Answer: B

Explanation:

Object Copy in OCI Object Storage allows you to make a copy of an object within the same bucket, across buckets within the same region, or to buckets in different regions. This feature is specifically designed for accomplishing data migration tasks within OCI Object Storage.

NEW QUESTION # 42

As an OCI architect, you are designing a cloud environment to accommodate an on-premises Data Center workload, which currently has a memory oversubscription ratio of 2:1. The ratio means the total physical memory of the on-premises servers is 100 GB, and the virtual memory allocated is 200 GB. Upon source discovery, you discovered the actual physical memory utilization is below 50%. Which memory allocation strategy should you consider for the Bare Metal instances in OCI to optimize oversubscription, applying the actual utilization?

- A. Bare Metal instances with total 200 GB of physical memory to match the on-premises virtual memory allocation
- B. Bare Metal instances with total 250 GB of physical memory, anticipating potential spikes in memory demand
- C. Bare Metal instances with total 150 GB of physical memory, providing a middle ground that acknowledges the oversubscription in on-premises
- **D. Bare Metal instances with total 75 GB of physical memory, considering the actual utilization in physical memory**

Answer: D

Explanation:

Allocating Bare Metal instances with a total physical memory of 75 GB, considering the actual utilization in physical memory, is the most suitable strategy to optimize oversubscription. It aligns with the goal of optimizing resource allocation based on the discovered utilization, ensuring efficient use of resources in the cloud environment.
