

# 1z0-1124-25 Exam Quiz - Latest 1z0-1124-25 Learning Material

What's more, part of that Pass4training 1z0-1124-25 dumps now are free: <https://drive.google.com/open?id=1oK3HJt-19UfcUBrxy2UnlbwDuIu75nWA>

I think these smart tips will help you to study well for the exam and get a brilliant score without any confusion. To get the Oracle Cloud Infrastructure 2025 Networking Professional 1z0-1124-25 practice test, find a reliable source that provides the 1z0-1124-25 Exam Dumps to their clients. Oracle Cloud Infrastructure 2025 Networking Professional 1z0-1124-25 certification exams are not easy but quite tricky to know whether the applicant has complete knowledge regarding the subject or not.

## Oracle 1z0-1124-25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Design for Hybrid Networking Architectures: This section of the exam measures the skills of a Network Infrastructure Architect and assesses capabilities in designing hybrid networking environments. It involves demonstrating proficiency with Dynamic Routing Gateway (DRG) configurations, attachments, BGP routing protocols, VPN services, and evaluating FastConnect offerings. This section also emphasizes maintaining reliable multicloud connectivity and implementing IPSec over FastConnect, along with transitive routing practices.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Migrate Workloads to OCI: This section of the exam measures the skills of a Cloud Migration Specialist and focuses on identifying the best networking connectivity strategies when migrating workloads to Oracle Cloud. It includes scenarios involving on-premises infrastructure, other cloud providers, and multicloud environments, ensuring proper connectivity and minimal downtime during transitions.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• OCI Networking Best Practices: This section of the exam measures the skills of a Cloud Solutions Architect and covers essential best practices for designing secure, efficient, and scalable networking solutions in OCI. It includes architectural design, connectivity setup, security hardening, and monitoring and logging standards that align with industry and Oracle-recommended guidelines.</li></ul>

Topic 4	<ul style="list-style-type: none"> <li>• Troubleshoot OCI Networking and Connectivity Issues: This section of the exam measures the skills of a Cloud Operations Engineer and evaluates the ability to select appropriate OCI tools and services for troubleshooting network and connectivity problems. It also tests knowledge of using OCI logging services to diagnose and resolve configuration or performance issues effectively.</li> </ul>
---------	---

## >> 1z0-1124-25 Exam Quiz <<

### Latest Oracle 1z0-1124-25 Learning Material | Reliable 1z0-1124-25 Test Questions

Immediately after you have made a purchase for our 1z0-1124-25 practice test, you can download our exam study materials to make preparations for the exams. It is universally acknowledged that time is a key factor in terms of the success of exams. There is why our 1z0-1124-25 Test Prep exam is well received by the general public. I believe if you are full aware of the benefits the immediate download of our PDF study exam brings to you, you will choose our 1z0-1124-25 actual study guide.

### Oracle Cloud Infrastructure 2025 Networking Professional Sample Questions (Q49-Q54):

#### NEW QUESTION # 49

You are troubleshooting an issue where legitimate users are occasionally blocked by your OCI WAF, which is configured in "Detection" mode. You need to identify the specific WAF rules that are triggering these false positives and adjust them without disrupting legitimate traffic. Which approach offers the most efficient way to diagnose and resolve this issue?

- A. Increase the sensitivity level of the entire WAF configuration.
- B. Analyze the OCI WAF logs in OCI Logging Analytics, focusing on the rule IDs associated with blocked requests. Then, move the specific rule to "log only".
- C. Disable all WAF rules and then gradually re-enable them one by one until the issue reappears.
- D. Whitelist the IP addresses of the affected users.

**Answer: B**

Explanation:

- \* Problem Scope: Identify and adjust WAF rules causing false positives in Detection mode without disrupting traffic.
- \* Detection Mode Behavior: Logs potential violations without blocking, allowing analysis.
- \* Evaluate Options:
- \* A: Use OCI Logging Analytics to pinpoint rule IDs from logs, then set rules to "log only" for testing; efficient and non-disruptive.
- \* B: Disabling all rules risks security and is time-consuming; inefficient.
- \* C: Increasing sensitivity worsens false positives; counterproductive.
- \* D: Whitelisting IPs is a temporary fix, not scalable or diagnostic; unsuitable.
- \* Conclusion: Logging analysis with rule adjustment is the most efficient approach.

OCI WAF logs provide detailed insights for troubleshooting. The Oracle Networking Professional study guide states, "In Detection mode, WAF logs all triggered rules, which can be analyzed in OCI Logging Analytics to identify false positives. Rules can then be adjusted to 'log only' to refine policies without affecting traffic" (OCI Networking Documentation, Section: Web Application Firewall). This method ensures precision and minimal disruption.

#### NEW QUESTION # 50

Which OCI resource is used to establish private connectivity between two VCNs within the same region, facilitating direct, low-latency communication?

- A. Local Peering Gateway (LPG)
- B. Service Gateway
- C. Internet Gateway
- D. Dynamic Routing Gateway (DRG)

**Answer: A**

Explanation:

- \* Objective: Identify the OCI resource for private, low-latency VCN-to-VCN connectivity in the same region.
- \* Option A: DRG connects VCNs to external networks (e.g., on-premises) or across regions, not for same-region peering-incorrect.
- \* Option B: LPG is designed for private peering of VCNs within the same region, ensuring low-latency communication-correct.
- \* Option C: Internet Gateway provides public internet access, not private connectivity-incorrect.
- \* Option D: Service Gateway connects VCNs to OCI services, not other VCNs-incorrect.
- \* Conclusion: Option B is the appropriate resource.

Oracle documentation states:

\* "A Local Peering Gateway (LPG) enables private connectivity between two VCNs in the same region, providing direct, low-latency communication." This confirms Option B. Reference: Local VCN Peering Overview - Oracle Help Center ([docs.oracle.com/en-us/iaas/Content/Network/Tasks/localVCNpeering.htm](https://docs.oracle.com/en-us/iaas/Content/Network/Tasks/localVCNpeering.htm)).

### NEW QUESTION # 51

You are designing a highly available web application in OCI. You've created a VCN with two public subnets across different Availability Domains (ADs). You need to enable IPv6 support for the application to cater to a growing number of IPv6-only clients. You plan to use a Load Balancer to distribute traffic to backend compute instances in the public subnets. Which of the following approaches ensures the highest level of resilience and IPv6 connectivity for your application?

- A. Configure the VCN with a public IPv6 CIDR block obtained from Oracle. Configure the Load Balancer to listen on IPv4 only, while backend compute instances listen on both IPv4 and IPv6, relying on NAT for IPv6 clients.
- **B. Configure the VCN with a public IPv6 CIDR block obtained from Oracle. Configure the Load Balancer to listen on both IPv4 and IPv6 addresses. Ensure the backend compute instances also listen on both IPv4 and IPv6 addresses.**
- C. Configure the VCN with a /48 IPv6 ULA prefix. Configure the Load Balancer to listen on both IPv4 and IPv6 addresses. Ensure the backend compute instances also listen on both IPv4 and IPv6 addresses. Route traffic accordingly using NSGs.
- D. Configure the VCN with a /48 IPv6 ULA prefix. Configure the Load Balancer to listen on IPv4 only, and the compute instances to listen on both IPv4 and IPv6, relying on NAT for IPv6 clients.

**Answer: B**

### NEW QUESTION # 52

Your company is migrating its publicly accessible website to OCI. You want to ensure the highest level of security and prevent DNS spoofing or cache poisoning attacks. You've decided to implement DNSSEC. Which of the following is the most important first step in enabling DNSSEC for your domain using OCI DNS?

- A. Configure the OCI DNS resolver to validate all incoming DNS responses using DNSSEC.
- B. Create a Traffic Management Steering Policy with the "DNSSEC" option enabled.
- C. Generate a Key Signing Key (KSK) and a Zone Signing Key (ZSK) using a third-party tool and upload them to OCI DNS.
- **D. Enable DNSSEC on the OCI DNS zone for your domain and obtain the Delegation Signer (DS) record from OCI DNS.**

**Answer: D**

Explanation:

- \* Objective: Enable DNSSEC to secure OCI DNS against spoofing.
- \* DNSSEC Process: Requires enabling on the zone, generating keys, and updating the registrar.
- \* Evaluate Options:
- \* A: Steering policies manage traffic, not DNSSEC; incorrect.
- \* B: OCI DNS auto-generates keys; manual upload unnecessary; incorrect.
- \* C: Enabling DNSSEC starts the process, provides DS record; correct first step.
- \* D: Resolver validation is client-side, not enabling DNSSEC; incorrect.
- \* Conclusion: Enabling DNSSEC on the zone is the critical first step.

DNSSEC setup begins at the zone level. The Oracle Networking Professional study guide states, "The first step to enable DNSSEC in OCI DNS is to activate it on the zone, which generates keys and provides a DS record to share with your registrar" (OCI Networking Documentation, Section: DNSSEC Configuration). This establishes the chain of trust.

### NEW QUESTION # 53

When analyzing Flow Logs for a subnet, how can you filter logs to isolate traffic that was rejected due to a specific security list rule?

- A. By filtering on the "type" field with the value "SECURITY" and the "rule" field with the rule number
- B. By filtering on the "status" field with the value "DENIED" and the "securityRule" field with the rule name
- **C. By filtering on the "action" field with the value "REJECT" and the "securityListRule" field with the rule ID**
- D. By filtering on the "direction" field with the value "EGRESS" and the "port" field with the rule port

**Answer: C**

Explanation:

\* Goal: Filter Flow Logs for traffic rejected by a specific security list rule.

\* Option A: "action" = "REJECT" identifies rejected traffic; "securityListRule" with rule ID pinpoints the exact rule-correct.

\* Option B: "status" and "securityRule" aren't standard Flow Log fields ("action" and "securityListRule" are)-incorrect.

\* Option C: "direction" and "port" filter traffic but don't specify rejection or rule-incorrec.

\* Option D: "type" and "rule" aren't valid Flow Log fields-incorrec.

\* Conclusion: Option A is the precise filtering method.

Oracle states:

\* "In Flow Logs, use the 'action' field ('REJECT') and 'securityListRule' field (rule ID) to filter traffic rejected by a specific security list rule." This validates Option A. Reference: Flow Logs Fields - Oracle Help Center (docs.oracle.com/en-us/iaas/Content/Network/Concepts/flowlogs.htm#fields).

### NEW QUESTION # 54

.....

After clients pay successfully for our 1z0-1124-25 guide torrent, they will receive our mails sent by our system in 5-10 minutes. Then they can click the mail and log in to use our software to learn immediately. For that time is extremely important for the learners, everybody hope that they can get the efficient learning. So clients can use our 1z0-1124-25 Test Torrent immediately is the great merit of our 1z0-1124-25 exam questions. When you begin to use, you can enjoy the various functions and benefits of our 1z0-1124-25 practice guide such as it can simulate the exam and boosts the timing function.
