Oracle Cloud Infrastructure 2024 Generative AI Professional Sample Questions (Q61-Q66):

NEW QUESTION # 61
What does "Loss" measure in the evaluation of OCI Generative AI fine-tuned models?
The difference between the accuracy of the model at the beginning of training and the accuracy of the deployed model

- A. The difference between the accuracy of the model at the beginning of training and the accuracy of the deployed model
- B. The level of incorrectness in the models predictions, with lower values indicating better performance
- C. The improvement in accuracy achieved by the model during training on the user-uploaded data set
- D. The percentage of incorrect predictions made by the model compared with the total number of predictions in the evaluation

Answer: B

Explanation:
In the evaluation of OCI Generative AI fine-tuned models, "Loss" measures the level of incorrectness in the model's predictions. It quantifies how far the model's predictions are from the actual values. Lower loss values indicate better performance, as they reflect a smaller discrepancy between the predicted and true values. The goal during training is to minimize the loss, thereby improving the model's accuracy and reliability.
