

1Z0-1151-25 Authorized Test Dumps & Reliable 1Z0-1151-25 Test Vce

2025 Latest Pass4sures 1Z0-1151-25 PDF Dumps and 1Z0-1151-25 Exam Engine Free Share: <https://drive.google.com/open?id=1WS2GORK8uMLFsDTKxfvjio26shG6jdIw>

The 1Z0-1151-25 practice exam we offered is designed with the real questions that will help you in enhancing your knowledge about the 1Z0-1151-25 certification exam. Our online test engine will improve your ability to solve the difficulty of 1Z0-1151-25 Real Questions and get used to the atmosphere of the formal test. Our experts created the valid 1Z0-1151-25 study guide for most of candidates to help them get good result with less time and money.

Oracle 1Z0-1151-25 Exam Syllabus Topics:

Topic	Details
Topic 1	Implement Oracle Database@Google Cloud: This section measures the proficiency of Cloud Database Engineers in utilizing Oracle Database@Google Cloud. It explores the architecture and operational framework for running Oracle databases on Google Cloud. Candidates will learn about onboarding procedures, provisioning resources, and managing database services effectively to optimize performance and availability in a Google Cloud-integrated multi-cloud ecosystem.
Topic 2	Configure Multicloud Connection Options: This section assesses the abilities of Network Engineers in configuring connectivity solutions for OCI multi-cloud environments. It includes setting up secure networking options such as Site-to-Site VPN and FastConnect for seamless cloud integration. Candidates will also learn how to implement Oracle Interconnect services for establishing direct, high-performance connections between OCI and third-party cloud providers like Microsoft Azure and Google Cloud.
Topic 3	Core OCI Services Overview: This section evaluates the knowledge of Identity and Database Administrators in managing OCI's core services for multi-cloud integration. It covers the implementation of identity federation between OCI Identity Domains and external identity providers, ensuring secure authentication across multiple cloud environments. Candidates will also gain expertise in configuring Virtual Cloud Network (VCN) components and administering OCI database services, including Base Databases, Autonomous Databases, and HeatWave, to support scalable multi-cloud deployments.

Topic 4	• Implement Oracle Database@Azure: This section tests the expertise of Database Solutions Architects in deploying and managing Oracle Database@Azure. It covers the architectural components and onboarding processes required for provisioning databases in Azure while maintaining Oracle's advanced database capabilities. Candidates will also focus on configuring high availability and disaster recovery strategies to ensure business continuity and data resilience in a multi-cloud setup.
Topic 5	• Introduction to Multicloud: This section of the exam measures the skills of Cloud Architects in understanding multicloud environments and their benefits. It covers the reasons organizations adopt multi-cloud strategies, including flexibility, cost optimization, and risk management. Candidates will learn about common multicloud use cases and how they are implemented in Oracle Cloud Infrastructure (OCI) to enhance interoperability and performance.

Reliable 1Z0-1151-25 Test Vce, 1Z0-1151-25 Passing Score

Considering all customers' sincere requirements, 1Z0-1151-25 test question persist in the principle of "Quality First and Clients Supreme" all along and promise to our candidates with plenty of high-quality products, considerate after-sale services as well as progressive management ideas. To be out of the ordinary and seek an ideal life, we must master an extra skill to get high scores and win the match in the workplace. Our 1Z0-1151-25 Exam Question can help make your dream come true. What's more, you can have a visit of our website that provides you more detailed information about the 1Z0-1151-25 guide torrent.

Oracle Cloud Infrastructure 2025 Multicloud Architect Professional Sample Questions (Q52-Q57):

NEW QUESTION # 52

Which interface can you use to provision Oracle Database at Azure Exadata Infrastructure?

- A. OCI Terraform scripts
- B. OCI console
- **C. Azure portal and APIs**
- D. Azure Terraform scripts

Answer: C

Explanation:

Since Oracle Database@Azure places the Exadata infrastructure within Azure datacenters, the primary interface for provisioning and managing that infrastructure is through Azure's own tools. This includes:

Azure portal: This is the graphical user interface for managing Azure resources. You can use the portal to deploy and configure the Exadata infrastructure.

Azure APIs: Azure also provides a rich set of APIs that allow for programmatic management of resources. These APIs can be used to automate the provisioning and configuration of Exadata infrastructure.

Here's why the other options are incorrect:

- OCI console: The OCI console is used for managing resources within Oracle Cloud Infrastructure. Since the Exadata infrastructure in Oracle Database@Azure resides within Azure, the OCI console is not used for its provisioning.
- Azure Terraform scripts: While Terraform can be used to manage Azure resources, it's not the only or primary interface. The Azure portal and APIs are the core tools provided by Microsoft. Terraform would be used as a layer on top of those.
- OCI Terraform scripts: OCI Terraform scripts are for managing resources in Oracle Cloud Infrastructure. They are not relevant for managing Exadata infrastructure within Azure.

NEW QUESTION # 53

For disaster recovery of Oracle Database@Azure to a separate OCI region, which of the following Oracle technologies is primarily used?

- A. Oracle GoldenGate
- **B. Oracle Data Guard**

- C. Oracle Cloud Infrastructure Object Storage replication
- D. Azure Site Recovery

Answer: B

Explanation:

Oracle Data Guard is Oracle's primary technology for disaster recovery and high availability. It allows you to create and maintain one or more standby databases as copies of a primary database. In the context of Oracle Database@Azure, Data Guard would be used to replicate data from the Exadata system in the primary OCI region (connected to Azure) to an Exadata system in a secondary OCI region. This provides a robust disaster recovery solution, allowing you to failover to the standby database in the event of an outage in the primary region.

The other options are less suitable for full disaster recovery of the database:

Azure Site Recovery is an Azure service for replicating VMs, but in this case, the database runs on Exadata, not Azure VMs.

Oracle GoldenGate is primarily used for data integration and real-time data movement between heterogeneous databases, not primarily for DR.

OCI Object Storage replication is for replicating object storage data, not databases

NEW QUESTION # 54

What is the purpose of Google Cloud Virtual Private Cloud (VPC) in the context of Oracle Database@Google Cloud?

- A. To isolate Oracle database services from other Google Cloud resources for security reasons
- B. To enable direct connectivity to OCI regions
- C. To manage billing for Oracle Database@Google Cloud
- D. To provide public internet access to Oracle database services

Answer: A

Explanation:

In Oracle Database@Google Cloud, Google Cloud Virtual Private Cloud (VPC) is used to create an isolated network environment within GCP, securing Oracle database services from other resources. This isolation enhances security by restricting access to the databases and ensuring they operate within a private subnet. Option B contradicts the private nature of the service, while Options C and D are unrelated to VPC's role. Oracle's documentation on Database@Google Cloud emphasizes VPC for network segmentation and security.

NEW QUESTION # 55

ABC company uses Okta as its identity provider and wants to federate with OCI to enable single sign-on (SSO) for accessing OCI resources. Users should be granted access to OCI compartments based on their Okta group memberships.

Which is the most direct and recommended approach to achieve this?

- A. Configure Okta as a SAML 2.0 Identity Provider in OCI and map Okta groups to OCI groups.
- B. Establish a VPN connection between your on-premises network and OCI and configure Active Directory Federation Services (AD FS) to bridge Okta and OCI.
- C. Use SCIM provisioning to create and manage OCI users based on Okta user attributes and group memberships.
- D. Create a custom application in Okta that uses the OCI API to authenticate users and authorize access to resources.

Answer: A

Explanation:

Here's why:

SAML 2.0 is the standard for web-based SSO: It's a mature and widely supported protocol for exchanging authentication and authorization data between identity providers (like Okta) and service providers (like OCI).

Direct Federation: Configuring Okta as a SAML IdP in OCI establishes a direct trust relationship, eliminating the need for intermediaries like VPNs or AD FS.

Group Mapping: OCI allows you to map Okta groups to OCI groups. This is crucial for implementing role-based access control (RBAC) and granting users access to specific OCI compartments based on their existing Okta group memberships. This simplifies user management and ensures consistent access policies.

Why the other options are less suitable:

B). Use SCIM provisioning: While SCIM (System for Cross-domain Identity Management) is useful for user lifecycle management (creating, updating, and deleting users), it's not the primary mechanism for SSO. It focuses on provisioning identities, not

authenticating them for access. You would still need SAML for SSO.

C). Establish a VPN connection and use AD FS: This adds unnecessary complexity. A VPN is for network connectivity, not identity federation. Introducing AD FS adds another layer of infrastructure and management overhead when a direct SAML integration is available.

D). Create a custom application: Building a custom application is a complex and time-consuming approach. It requires significant development effort and ongoing maintenance. Using the built-in SAML integration is far more efficient and secure.

NEW QUESTION # 56

what is the primary purpose of the "cross-connect" established between the OCI and Azure environments?

- A. To provide direct access to Azure storage services from the Exadata systems.
- B. To facilitate the initial deployment and configuration of the Exadata infrastructure.
- **C. To enable high-bandwidth, low-latency communication between the Exadata systems and Azure Virtual Networks.**
- D. To establish a secure VPN connection for administrative access to the Exadata systems.

Answer: C

Explanation:

The "cross-connect" between OCI and Azure, facilitated by Oracle FastConnect and Azure ExpressRoute, is specifically designed to create a direct, private, and high-performance network connection. This connection is crucial for:

High Bandwidth: Enables rapid data transfer between applications running in Azure and the Exadata databases in OCI.

Low Latency: Minimizes delays in communication, which is essential for performance-sensitive applications.

This direct interconnect avoids traversing the public internet, ensuring better performance, security, and reliability for workloads that span both cloud environments

NEW QUESTION # 57

.....

If you are a child's mother, with 1Z0-1151-25 test answers, you will have more time to stay with your child; if you are a student, with 1Z0-1151-25 exam torrent, you will have more time to travel to comprehend the wonders of the world. In the other worlds, with 1Z0-1151-25 guide tests, learning will no longer be a burden in your life. You can save much time and money to do other things what meaningful. You will no longer feel tired because of your studies, if you decide to choose and practice our 1Z0-1151-25test answers. Your life will be even more exciting.
