

1Z0-1151-25 Exam Pass4sure, Examcollection 1Z0-1151-25 Dumps

P.S. Free & New 1Z0-1151-25 dumps are available on Google Drive shared by RealExamFree: <https://drive.google.com/open?id=1w3WJp87Dja34v5I6b4SpQakhNrevXXXU>

We offer you free demo to you to have a try before buying 1Z0-1151-25 study guide, therefore you can have a better understanding of what you are going to buy. Free demo can be find in our website, if you are quite satisfied with the free demo, just add the 1Z0-1151-25 study guide to shopping cart, after you buy it, our system will send the downloading link and password to you within ten minutes, and you can start your learning right now. Moreover, we offer you free update for one year after you buy the 1Z0-1151-25 Exam Dumps, therefore you can get the latest version timely.

Our 1Z0-1151-25 exam training material is organized by high experienced IT workers. Our IT elite team offer new version of 1Z0-1151-25 Exam real questions gradually, which aims to ensure examinees pass 1Z0-1151-25 test in one time.

Free 1 year Oracle 1Z0-1151-25 Dumps Updates: a Full Refund Guarantee By RealExamFree

This version of the practice exam is suitable for individuals who are comfortable in practicing for the exam online. This software contains all the features we have discussed above in the paragraph of the desktop version. RealExamFree online practice test frees you from hassles of installing software and plugins. You can use this format of the Oracle 1Z0-1151-25 Mock Exam on any operating system, and it is accessible via these browsers: Opera, Safari, Chrome, Firefox, MS Edge, and Internet Explorer.

Oracle 1Z0-1151-25 Exam Syllabus Topics:

Topic	Details
Topic 1	Introduction to Multicloud: This section of the exam measures the skills of Cloud Architects in understanding multicloud environments and their benefits. It covers the reasons organizations adopt multi-cloud strategies, including flexibility, cost optimization, and risk management. Candidates will learn about common multicloud use cases and how they are implemented in Oracle Cloud Infrastructure (OCI) to enhance interoperability and performance.

Topic 2	• Implement Oracle Database@Azure: This section tests the expertise of Database Solutions Architects in deploying and managing Oracle Database@Azure. It covers the architectural components and onboarding processes required for provisioning databases in Azure while maintaining Oracle's advanced database capabilities. Candidates will also focus on configuring high availability and disaster recovery strategies to ensure business continuity and data resilience in a multi-cloud setup.
Topic 3	• Implement Oracle Database@Google Cloud: This section measures the proficiency of Cloud Database Engineers in utilizing Oracle Database@Google Cloud. It explores the architecture and operational framework for running Oracle databases on Google Cloud. Candidates will learn about onboarding procedures, provisioning resources, and managing database services effectively to optimize performance and availability in a Google Cloud-integrated multi-cloud ecosystem.
Topic 4	• Core OCI Services Overview: This section evaluates the knowledge of Identity and Database Administrators in managing OCI's core services for multi-cloud integration. It covers the implementation of identity federation between OCI Identity Domains and external identity providers, ensuring secure authentication across multiple cloud environments. Candidates will also gain expertise in configuring Virtual Cloud Network (VCN) components and administering OCI database services, including Base Databases, Autonomous Databases, and HeatWave, to support scalable multi-cloud deployments.
Topic 5	• Configure Multicloud Connection Options: This section assesses the abilities of Network Engineers in configuring connectivity solutions for OCI multi-cloud environments. It includes setting up secure networking options such as Site-to-Site VPN and FastConnect for seamless cloud integration. Candidates will also learn how to implement Oracle Interconnect services for establishing direct, high-performance connections between OCI and third-party cloud providers like Microsoft Azure and Google Cloud.

Oracle Cloud Infrastructure 2025 Multicloud Architect Professional Sample Questions (Q29-Q34):

NEW QUESTION # 29

How are the resources provisioned in Oracle Database@Azure service?

- A. Oracle Exadata Infrastructure and Oracle Exadata VM Cluster are provisioned in the OCI console and Oracle container and pluggable databases in the Azure portal.
- B. Oracle Exadata Infrastructure, Oracle Exadata VM Cluster, Oracle container, and pluggable databases are provisioned in the Azure portal.
- C. Oracle Exadata VM Cluster and Oracle container databases are provisioned in the OCI console.
- **D. Oracle Exadata Infrastructure and Oracle Exadata VM Cluster are provisioned in the Azure portal.**

Answer: D

Explanation:

In Oracle Database@Azure, Oracle Exadata Infrastructure and Exadata VM Clusters are provisioned via the Azure portal, integrating OCI database services into Azure's ecosystem. Option B overextends to include container/pluggable databases (managed separately), while Options C and D incorrectly involve the OCI console-provisioning is Azure-native. Oracle's documentation corrects the original answer (C) to A.

NEW QUESTION # 30

To achieve high availability in a 2-node RAC DB System in Oracle Cloud Infrastructure, what would you use to distribute your nodes to provide database instance fault isolation?

- A. Availability Domains
- B. Remote region
- **C. Fault Domains**
- D. Local region

Answer: C

Explanation:

In a 2-node Real Application Clusters (RAC) DB System in OCI, Fault Domains (FDs) within a single Availability Domain (AD) are used to distribute nodes, ensuring fault isolation at the hardware level (e.g., separate racks/power). Availability Domains (Option A) provide broader isolation but are overkill for a 2-node setup within one region. Local/Remote regions (Options B and D) are geographic, not instance-specific. Oracle's HA documentation recommends FDs for RAC.

NEW QUESTION # 31

When configuring Oracle Interconnect for Google Cloud, what key resource must be created in the Google Cloud environment?

- A. Google Cloud NAT gateway
- B. Cross-Cloud Interconnect VLAN attachment
- C. Shared VPC with OCI
- **D. Partner Interconnect VLAN attachment**

Answer: D

Explanation:

Configuring Oracle Interconnect for Google Cloud requires creating a Partner Interconnect VLAN attachment in GCP, which pairs with OCI's FastConnect virtual circuit for private connectivity. Shared VPC (Option A) is unrelated, NAT gateways (Option C) are for internet access, and "Cross-Cloud Interconnect" (Option D) is not a GCP term. Oracle's setup guide confirms the VLAN attachment's role.

NEW QUESTION # 32

For disaster recovery of Oracle Database@Azure to a separate OCI region, which of the following Oracle technologies is primarily used?

- A. Oracle GoldenGate
- **B. Oracle Data Guard**
- C. Azure Site Recovery
- D. Oracle Cloud Infrastructure Object Storage replication

Answer: B

Explanation:

Oracle Data Guard is Oracle's primary technology for disaster recovery and high availability. It allows you to create and maintain one or more standby databases as copies of a primary database. In the context of Oracle Database@Azure, Data Guard would be used to replicate data from the Exadata system in the primary OCI region (connected to Azure) to an Exadata system in a secondary OCI region. This provides a robust disaster recovery solution, allowing you to failover to the standby database in the event of an outage in the primary region.

The other options are less suitable for full disaster recovery of the database:

Azure Site Recovery is an Azure service for replicating VMs, but in this case, the database runs on Exadata, not Azure VMs. Oracle GoldenGate is primarily used for data integration and real-time data movement between heterogeneous databases, not primarily for DR.

OCI Object Storage replication is for replicating object storage data, not databases

NEW QUESTION # 33

When using the Oracle Database at Azure, which tasks are carried out in the Azure portal?

- A. Configuring Oracle database homes
- **B. Managing and maintaining Exadata VM cluster and infrastructure**
- C. Provisioning container and pluggable databases
- D. Enabling Data Guard for database backups

Answer: B

Explanation:

Oracle Database@Azure is designed to bring Oracle Exadata infrastructure into Azure datacenters. This means that the Azure portal is used for managing the underlying Exadata infrastructure.

Provisioning container and pluggable databases: While the underlying infrastructure resides in Azure, the creation and management of Container Databases (CDBs) and Pluggable Databases (PDBs) are mostly handled using Oracle database tools and potentially through the OCI console for some specific tasks.
