

1Z0-1151-25 Reliable Test Syllabus & 1Z0-1151-25 Reliable Real Exam

2025 Latest Exam4PDF 1Z0-1151-25 PDF Dumps and 1Z0-1151-25 Exam Engine Free Share: https://drive.google.com/open?id=1gXLvdxfKS0iJTSLrtOXdlZLFa_sZfIH8

Perhaps you agree that strength is very important, but there are doubts about whether our 1Z0-1151-25 study questions can really improve your strength. It does not matter, we can provide you with a free trial version of our 1Z0-1151-25 exam braindumps. You can free download the demos of our 1Z0-1151-25 learning prep easily on our website, and there are three versions according to the three versions of our 1Z0-1151-25 practice engine. It is really as good as we say, you can experience it yourself.

Oracle 1Z0-1151-25 Exam Syllabus Topics:

Topic	Details
Topic 1	Implement Oracle Database@Azure: This section tests the expertise of Database Solutions Architects in deploying and managing Oracle Database@Azure. It covers the architectural components and onboarding processes required for provisioning databases in Azure while maintaining Oracle's advanced database capabilities. Candidates will also focus on configuring high availability and disaster recovery strategies to ensure business continuity and data resilience in a multi-cloud setup.

Topic 2	• Introduction to Multicloud: This section of the exam measures the skills of Cloud Architects in understanding multicloud environments and their benefits. It covers the reasons organizations adopt multi-cloud strategies, including flexibility, cost optimization, and risk management. Candidates will learn about common multicloud use cases and how they are implemented in Oracle Cloud Infrastructure (OCI) to enhance interoperability and performance.
Topic 3	• Implement Oracle Database@Google Cloud: This section measures the proficiency of Cloud Database Engineers in utilizing Oracle Database@Google Cloud. It explores the architecture and operational framework for running Oracle databases on Google Cloud. Candidates will learn about onboarding procedures, provisioning resources, and managing database services effectively to optimize performance and availability in a Google Cloud-integrated multi-cloud ecosystem.
Topic 4	• Core OCI Services Overview: This section evaluates the knowledge of Identity and Database Administrators in managing OCI's core services for multi-cloud integration. It covers the implementation of identity federation between OCI Identity Domains and external identity providers, ensuring secure authentication across multiple cloud environments. Candidates will also gain expertise in configuring Virtual Cloud Network (VCN) components and administering OCI database services, including Base Databases, Autonomous Databases, and HeatWave, to support scalable multi-cloud deployments.
Topic 5	• Configure Multicloud Connection Options: This section assesses the abilities of Network Engineers in configuring connectivity solutions for OCI multi-cloud environments. It includes setting up secure networking options such as Site-to-Site VPN and FastConnect for seamless cloud integration. Candidates will also learn how to implement Oracle Interconnect services for establishing direct, high-performance connections between OCI and third-party cloud providers like Microsoft Azure and Google Cloud.

Oracle 1Z0-1151-25 Questions – Best Way To Clear The Exam [2025]

Our system is high effective and competent. After the clients pay successfully for the 1Z0-1151-25 certification material the system will send the products to the clients by the mails. The clients click on the links in the mails and then they can use the 1Z0-1151-25 prep guide dump immediately. Our system provides safe purchase procedures to the clients and we guarantee the system won't bring the virus to the clients' computers and the successful payment for our 1Z0-1151-25 learning file. Our system is strictly protect the clients' privacy and sets strict interception procedures to forestall the disclosure of the clients' private important information. Our system will automatically send the updates of the 1Z0-1151-25 learning file to the clients as soon as the updates are available. So our system is wonderful.

Oracle Cloud Infrastructure 2025 Multicloud Architect Professional Sample Questions (Q53-Q58):

NEW QUESTION # 53

How are backups of databases running on Oracle Database@Google Cloud typically handled?

- A. Backups are automatically stored in Google Cloud Storage.
- **B. Backups can be configured to use OCI Object Storage or other customer-managed storage locations accessible from the Exadata system.**
- C. Backups are stored on a separate Exadata storage array within the same Google Cloud data center.
- D. Backups are managed exclusively using Google Cloud Backup and DR service.

Answer: B

Explanation:

Here's why:

While Google handles the underlying infrastructure, the backup destination is flexible to meet customer needs.

A). Backups are automatically stored in Google Cloud Storage: While possible, it's not the automatic or only option. Customers have more flexibility.

C). Backups are stored on a separate Exadata storage array within the same Google Cloud data center: This is not the typical

approach. It would be less cost-effective and less flexible than using object storage.

D). Backups are managed exclusively using Google Cloud Backup and DR service: While Google Cloud Backup and DR might be used in conjunction with other methods, it's not the exclusive method.

The key is that customers can configure backups to:

OCI Object Storage: This is a common choice, leveraging Oracle's cloud storage.

Other customer-managed storage: This could include NFS mounts, other cloud storage providers, or on-premises storage accessible via network connections.

NEW QUESTION # 54

Which of the following is NOT a factor influencing the bandwidth options available for your connection?

- A. The subnet size in your Azure Virtual Network
- B. The availability of interconnect partners in the region
- C. The location of your OCI region
- D. The location of your Azure region

Answer: A

Explanation:

Here's why:

When considering bandwidth for a connection between Azure and OCI (typically using Azure ExpressRoute and OCI FastConnect), the focus is on the dedicated connections themselves, not the internal subnetting within your virtual networks.

Bandwidth is determined by the ExpressRoute circuit and FastConnect virtual circuit: You select specific bandwidth tiers when you provision your ExpressRoute circuit in Azure and your FastConnect virtual circuit in OCI. These tiers define the maximum bandwidth available for the connection.

Subnetting is internal to each cloud: The size of your subnets within your Azure Virtual Network (VNet) or your OCI Virtual Cloud Network (VCN) affects how you organize your resources within each cloud, but it does not directly impact the bandwidth of the interconnect between the clouds.

Why the other options are factors:

A). The location of your Azure region: The available bandwidth options for ExpressRoute can sometimes vary slightly depending on the specific Azure region.

B). The location of your OCI region: Similarly, the available bandwidth options for FastConnect can vary based on the OCI region.

D). The availability of interconnect partners in the region: The availability of interconnect partners (the companies that provide the physical connectivity between Azure and OCI) in a given region can influence the available bandwidth options and the process of establishing the connection.

NEW QUESTION # 55

What is the first action that needs to be completed during the onboarding of Oracle Database@Azure?

- A. The customer consults Oracle Sales for a price agreement, which is then created as a Private Offer in the Azure marketplace by Oracle to be purchased by the customer.
- B. An active Azure subscription is linked with the OCI tenancy for billing purposes.
- C. The onboarding step is preceded by a private offer purchase from the Oracle Private Offer marketplace.
- D. Linking the OCI account is recommended (but optional) during onboarding to avoid logging in to the OCI account by manually providing credentials each time.

Answer: A

Explanation:

The initial step in onboarding Oracle Database@Azure is establishing a commercial agreement. This involves:

Contacting Oracle Sales: The customer first engages with Oracle Sales to discuss their requirements and negotiate pricing.

Private Offer Creation: Based on the agreed-upon terms, Oracle creates a Private Offer within the Azure Marketplace. This private offer is specifically tailored to the customer's needs and pricing.

Private Offer Purchase: The customer then purchases this private offer through the Azure Marketplace, formally establishing the commercial relationship for using Oracle Database@Azure.

This process ensures that the customer has a clear understanding of the costs and terms associated with the service before proceeding with any technical setup.

Why the other options are incorrect:

a). Linking the OCI account is recommended (but optional) during onboarding to avoid logging in to the OCI account by manually

providing credentials each time: Linking an OCI account is beneficial for certain management tasks and integration, but it's not the first step in the onboarding process. The commercial agreement must be in place first.

b). An active Azure subscription is linked with the OCI tenancy for billing purposes: While billing is eventually handled through Azure, the initial step is establishing the commercial agreement through the private offer. The linking of subscriptions happens later in the process.

d). The onboarding step is preceded by a private offer purchase from the Oracle Private Offer marketplace: While the purchase is necessary, it's preceded by the consultation with Oracle Sales and the creation of the private offer itself

NEW QUESTION # 56

What steps must be completed during the onboarding process for Oracle Database@Google Cloud?

- A. My Oracle Support registration and RBAC assignment
- **B. Purchase and configuration**
- C. Google Cloud project creation and OCI account subscription
- D. Account linking and identity federation

Answer: B

Explanation:

The onboarding process for Oracle Database@Google Cloud primarily involves purchasing the service (via Google Cloud Marketplace) and configuring the resources (e.g., Exadata Infrastructure in GCP). Options B, C, and D include preparatory or optional steps, but the core onboarding focuses on purchase and initial setup, as per Oracle's documentation. This streamlined process reflects the service's integration into GCP workflows.

NEW QUESTION # 57

What does the term "multicloud" mean and how can it help organizations manage their IT infrastructure?

- A. The integration of on-premises infrastructure with cloud services for a hybrid cloud approach
- B. The use of multiple cloud services from a single provider for redundancy and high availability
- C. The deployment of a single cloud service across multiple regions and data centers for better performance
- **D. The use of cloud services from multiple providers to leverage the best features and services of each**

Answer: D

Explanation:

"Multicloud" refers to using services from multiple cloud providers (e.g., OCI, Azure, GCP) to leverage their unique strengths, enhancing flexibility, resilience, and cost-efficiency. Option A describes hybrid cloud, Option C is single-provider redundancy, and Option D is multi-region deployment-not multicloud. Oracle's multicloud strategy documentation defines this approach as a key IT management enabler.

NEW QUESTION # 58

.....

Are you staying up for the 1Z0-1151-25 exam day and night? Do you have no free time to contact with your friends and families because of preparing for the exam? Are you tired of preparing for different kinds of exams? If your answer is yes, please buy our 1Z0-1151-25 Exam Questions, which is equipped with a high quality. We can make sure that our products have the ability to help you pass the exam and get the according 1Z0-1151-25 certification.
