1Z0-1151-25 Valid Test Cost, 1Z0-1151-25 PDF Guide

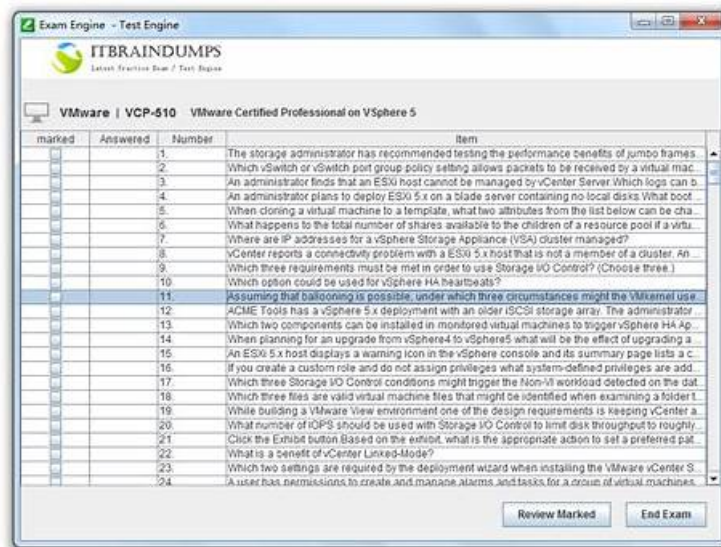

DOWNLOAD the newest Exams4Collection 1Z0-1151-25 PDF dumps from Cloud Storage for free:
https://drive.google.com/open?id=1XIPmPmRVJVUdPBbGz72Q13cYl0PyI1jr

Our 1Z0-1151-25 exam material is full of useful knowledge, which can strengthen your capacity for work. As we all know, it is important to work efficiently. So once you have done you work excellently, you will soon get promotion. You need to be responsible for your career development. The assistance of our 1Z0-1151-25 guide question dumps are beyond your imagination. You will regret if you throw away the good products. One of the significant advantages of our 1Z0-1151-25 Exam Material is that you can spend less time to pass the exam. People are engaged in modern society. So our goal is to achieve the best learning effect in the shortest time.

Oracle 1Z0-1151-25 Exam Syllabus Topics:

Topic	Details
Topic 1	• Implement Oracle Database@Google Cloud: This section measures the proficiency of Cloud Database Engineers in utilizing Oracle Database@Google Cloud. It explores the architecture and operational framework for running Oracle databases on Google Cloud. Candidates will learn about onboarding procedures, provisioning resources, and managing database services effectively to optimize performance and availability in a Google Cloud-integrated multi-cloud ecosystem.
Topic 2	• Implement Oracle Database@Azure: This section tests the expertise of Database Solutions Architects in deploying and managing Oracle Database@Azure. It covers the architectural components and onboarding processes required for provisioning databases in Azure while maintaining Oracle's advanced database capabilities. Candidates will also focus on configuring high availability and disaster recovery strategies to ensure business continuity and data resilience in a multi-cloud setup.
Topic 3	• Core OCI Services Overview: This section evaluates the knowledge of Identity and Database Administrators in managing OCI's core services for multi-cloud integration. It covers the implementation of identity federation between OCI Identity Domains and external identity providers, ensuring secure authentication across multiple cloud environments. Candidates will also gain expertise in configuring Virtual Cloud Network (VCN) components and administering OCI database services, including Base Databases, Autonomous Databases, and HeatWave, to support scalable multi-cloud deployments.

Topic 4	• Configure Multicloud Connection Options: This section assesses the abilities of Network Engineers in configuring connectivity solutions for OCI multi-cloud environments. It includes setting up secure networking options such as Site-to-Site VPN and FastConnect for seamless cloud integration. Candidates will also learn how to implement Oracle Interconnect services for establishing direct, high-performance connections between OCI and third-party cloud providers like Microsoft Azure and Google Cloud.
Topic 5	• Introduction to Multicloud: This section of the exam measures the skills of Cloud Architects in understanding multicloud environments and their benefits. It covers the reasons organizations adopt multi-cloud strategies, including flexibility, cost optimization, and risk management. Candidates will learn about common multicloud use cases and how they are implemented in Oracle Cloud Infrastructure (OCI) to enhance interoperability and performance.

Get Perfect 1Z0-1151-25 Valid Test Cost and Pass Exam in First Attempt

In your day-to-day life, things look like same all the time, but preparing for critical 1Z0-1151-25 practice exam is not one of those options. About the exam ahead of you this time, our 1Z0-1151-25 study braindumps will be your indispensable choices. Before you get the official one, you can estimate our quality by downloading the free demos. You will pay just a small amount of money on our 1Z0-1151-25 Exam Guide but harvest colossal success with potential bright future. And we have confidence that your future aims will come along with this successful exam as the beginning. So choosing 1Z0-1151-25 actual question is choosing success.

Oracle Cloud Infrastructure 2025 Multicloud Architect Professional Sample Questions (Q24-Q29):

NEW QUESTION # 24
what is the primary purpose of the "cross-connect" established between the OCI and Azure environments?

- A. To establish a secure VPN connection for administrative access to the Exadata systems.
- B. To enable high-bandwidth, low-latency communication between the Exadata systems and Azure Virtual Networks.
- C. To facilitate the initial deployment and configuration of the Exadata infrastructure.
- D. To provide direct access to Azure storage services from the Exadata systems.

Answer: B

Explanation:
The "cross-connect" between OCI and Azure, facilitated by Oracle FastConnect and Azure ExpressRoute, is specifically designed to create a direct, private, and high-performance network connection. This connection is crucial for:
High Bandwidth: Enables rapid data transfer between applications running in Azure and the Exadata databases in OCI.
Low Latency: Minimizes delays in communication, which is essential for performance-sensitive applications.
This direct interconnect avoids traversing the public internet, ensuring better performance, security, and reliability for workloads that span both cloud environments

NEW QUESTION # 25
What is the recommended approach if the application needs to connect to an Autonomous Database from an on-premises environment and you want to establish a secure and dedicated connection?

- A. Connect directly using the public IP address of the Autonomous Database.
- B. Configure a reverse proxy server in your OCI VCN.
- C. Use FastConnect to establish a dedicated connection between your on-premises network and your OCI VCN.
- D. Use an IPSec VPN tunnel between your on-premises network and your OCI VCN.

Answer: C

Explanation:
Here's why:

FastConnect: FastConnect provides a dedicated, private network connection between your on-premises network and your OCI VCN. This offers several advantages:

Enhanced Security: Data travels over a private connection, bypassing the public internet, which significantly reduces the risk of interception or eavesdropping.

Higher Bandwidth and Lower Latency: FastConnect offers higher bandwidth and lower latency compared to internet-based connections, resulting in improved application performance.

Consistent Performance: Dedicated connectivity provides more consistent network performance, as it is not subject to the fluctuations of the public internet.

Why other options are less suitable:

a) Connect directly using the public IP address of the Autonomous Database: While this is technically possible, it's generally not recommended for production environments, especially when security is a primary concern. Exposing the database directly to the public internet increases the attack surface and exposes it to potential security threats.

b) Use an IPSec VPN tunnel between your on-premises network and your OCI VCN: While a VPN provides a secure connection over the internet, it typically offers lower bandwidth and higher latency compared to FastConnect. It's a good option for less demanding workloads or when FastConnect is not feasible, but FastConnect is preferred for dedicated, high-performance connectivity.

d) Configure a reverse proxy server in your OCI VCN: A reverse proxy can provide some security benefits, but it doesn't establish a dedicated connection. It still relies on an internet-based connection, which has the same security and performance limitations as connecting directly using the public IP.

NEW QUESTION # 26

Which OCI native database service can be provisioned using Oracle Database at Google Cloud?

- A. Autonomous Database Serverless
- B. Autonomous Database on Dedicated Infrastructure
- C. HeatWave
- D. Base Database Service

Answer: D

Explanation:

Oracle Database@Google Cloud allows you to run Oracle databases directly on Google Cloud infrastructure. It primarily focuses on providing a managed environment for traditional Oracle Database deployments, which aligns with the Base Database Service offering in OCI.

Here's why the other options are not the primary focus:

Autonomous Database Serverless and Autonomous Database on Dedicated Infrastructure: These are Autonomous Database offerings, which are fully managed, self-driving database services. While Oracle Database@Google Cloud could potentially support aspects of Autonomous Database in the future, its initial focus is on bringing the core Oracle Database experience to Google Cloud, similar to Base Database Service.

HeatWave: HeatWave is an in-memory query accelerator for MySQL Database Service.

It's not related to Oracle Database and therefore not relevant to Oracle Database@Google Cloud

NEW QUESTION # 27

Which interface can you use to provision Oracle Database at Azure Exadata Infrastructure?

- A. Azure portal and APIs
- B. Azure Terraform scripts
- C. OCI console
- D. OCI Terraform scripts

Answer: A

Explanation:

Since Oracle Database@Azure places the Exadata infrastructure within Azure datacenters, the primary interface for provisioning and managing that infrastructure is through Azure's own tools. This includes:

Azure portal: This is the graphical user interface for managing Azure resources. You can use the portal to deploy and configure the Exadata infrastructure.

Azure APIs: Azure also provides a rich set of APIs that allow for programmatic management of resources. These APIs can be used to automate the provisioning and configuration of Exadata infrastructure.

Here's why the other options are incorrect:

a). OCI console: The OCI console is used for managing resources within Oracle Cloud Infrastructure. Since the Exadata infrastructure in Oracle Database@Azure resides within Azure, the OCI console is not used for its provisioning.

b). Azure Terraform scripts: While Terraform can be used to manage Azure resources, it's not the only or primary interface. The Azure portal and APIs are the core tools provided by Microsoft. Terraform would be used as a layer on top of those.

d). OCI Terraform scripts: OCI Terraform scripts are for managing resources in Oracle Cloud Infrastructure. They are not relevant for managing Exadata infrastructure within Azure.

NEW QUESTION # 28

Which regions support Oracle Interconnect for Google Cloud?

- A. Only regions with Oracle FastConnect availability
- B. Only regions in North America
- C. All OCI and GCP regions globally
- D. Specific OCI and GCP regions where Interconnect partnership is established

Answer: D

Explanation:

The Oracle Interconnect for Google Cloud is available only in specific regions where Oracle and Google have established cross-cloud interconnect partnerships, such as Ashburn, London, and Frankfurt (as of June 2024 announcements). It's not globally available across all OCI and GCP regions (Option A), nor restricted to North America (Option C) or FastConnect-only regions (Option D). The partnership leverages OCI FastConnect and GCP Partner Interconnect in these designated locations, as outlined in Oracle's multicloud connectivity documentation.

NEW QUESTION # 29

......

Annual test syllabus is essential to predicate the real 1Z0-1151-25 questions. So you must have a whole understanding of the test syllabus. After all, you do not know the 1Z0-1151-25 exam clearly. It must be difficult for you to prepare the 1Z0-1151-25 exam. Then our study materials can give you some guidance. All questions on our 1Z0-1151-25 study materials are strictly in accordance with the knowledge points on newest test syllabus. Also, our experts are capable of predicating the difficult knowledge parts of the 1Z0-1151-25 Exam according to the test syllabus. We have tried our best to simply the difficult questions. In order to help you memorize the 1Z0-1151-25 study materials better, we have detailed explanations of the difficult questions such as illustration, charts and referring website. Every year some knowledge is reoccurring over and over. You must ensure that you master them completely.
