Oracle Fusion Cloud Applications SCM Foundations Associate - Rel 1 Sample Questions (Q20-Q25):

NEW QUESTION # 20

Which feature in Oracle Fusion Cloud SCM tracks and manages real-time production processes?

- A. Cost Accounting.
- **B. Manufacturing Execution.**
- C. Supplier Qualification.
- D. Inventory Management.

Answer: B

Explanation:

Manufacturing Execution (C) in Oracle Fusion Cloud SCM tracks and manages real-time production processes on the shop floor, capturing data like work order progress, material usage, and labor hours. For example, if a worker completes 100 units, the system logs the time, resources consumed (e.g., 50 kg of steel), and any delays (e.g., machine downtime), providing live visibility. Option A (Supplier Qualification) evaluates suppliers, not production. Option B (Cost Accounting) analyzes costs post-production, not real-time processes. Option D (Inventory Management) tracks stock, not manufacturing activities. This feature ensures production aligns with schedules, identifies bottlenecks instantly, and feeds data into cost and quality systems, enhancing operational control.

NEW QUESTION # 21

What is the purpose of the Back-to-Back Order Fulfillment process in Oracle Fusion Cloud SCM?

- A. It delays order fulfillment until inventory is replenished.
- B. It eliminates the need for supplier collaboration.
- **C. It links customer orders to supplier purchase orders for direct fulfillment.**
- D. It prioritizes warehouse stock over supplier sourcing.

Answer: C

Explanation:

The Back-to-Back Order Fulfillment process (D) links customer orders directly to supplier purchase orders, enabling direct fulfillment without relying solely on existing inventory. For example, a customer orders 50 custom widgets; the system generates a PO to the supplier, who ships directly or via the warehouse, reducing stock holding. Option A is incorrect-it favors supplier sourcing when stock is unavailable. Option B is false-it accelerates, not delays, fulfillment. Option C is wrong-supplier collaboration is essential. This process cuts inventory costs, speeds delivery, and supports make-to-order models efficiently.

NEW QUESTION # 22

What is the purpose of the Available to Promise (ATP) process in Oracle Fusion Cloud SCM?

- **A. It ensures product availability commitments based on inventory and supply constraints.**
- B. It manages only supplier payments without impacting inventory levels.
- C. It guarantees immediate product shipment for all orders.

Answer: A

Explanation:

The Available to Promise (ATP) process in Oracle Fusion Cloud SCM is designed to determine product availability and provide realistic commitments to customers based on current inventory levels and supply constraints, such as production capacity and supplier lead times. ATP calculates how much stock is "available to promise" for new orders by subtracting existing commitments from on-hand inventory and factoring in planned supply. For example, if a warehouse has 50 units of a product, with 20 already allocated to prior orders, ATP shows 30 units available for new promises. Option B is incorrect because ATP has no direct role in managing supplier payments-it focuses on inventory and supply planning. Option C is false as ATP does not guarantee immediate shipment; it provides feasible dates based on availability, not an unrealistic promise of instant delivery. This process supports accurate order promising, prevents stockouts, and aligns customer expectations with operational reality, making it a cornerstone of effective supply chain management.

NEW QUESTION # 23

Which key metric measures the effectiveness of the Demand to Management OMBP?

- A. Customer Acquisition Cost.
- **B. Forecast Accuracy.**
- C. Order Fill Rate.

- D. Employee Turnover Rate.

Answer: B

Explanation:

The Demand to Management Oracle Manufacturing Business Process (OMBP) in Oracle Fusion Cloud SCM focuses on translating demand signals into actionable supply plans, making Forecast Accuracy the key metric for measuring its effectiveness. Forecast Accuracy compares predicted demand to actual demand, revealing how well the system anticipates customer needs. For instance, if a forecast predicts 1,000 units sold but actual sales are 900, the accuracy is 90%, highlighting areas for improvement. Option A (Employee Turnover Rate) is an HR metric unrelated to demand management. Option C (Customer Acquisition Cost) pertains to marketing, not supply chain processes. Option D (Order Fill Rate) measures fulfillment efficiency, which is a downstream outcome, not a direct indicator of demand forecasting effectiveness. High forecast accuracy ensures inventory aligns with demand, reducing overstock or shortages, and supports strategic decision-making across procurement and production.

NEW QUESTION # 24

What is the function of Receipt Accounting in Oracle Fusion Cloud SCM?

- A. It ensures supplier invoices are paid on time.
- B. It validates contract terms for procurement.
- C. It records the receipt of goods and services, creating accounting entries for financial reporting.

Answer: C

Explanation:

Receipt Accounting in Oracle Fusion Cloud SCM records the receipt of goods and services, generating accounting entries for financial reporting and cost tracking. Option A (timely payments) is a downstream process, not its core function. Option C (contract validation) pertains to procurement, not receipt accounting. This ensures accurate financial records and compliance.
