Oracle Data Platform 2025 Foundations Associate Sample Questions (Q38-Q43):

NEW QUESTION # 38

The DBA has determined that the number of OCPU assigned to an Autonomous Database does not provide sufficient performance. Which option does the DBA have in this case?

- **A. Open the database in OCI Console and increase the number of OCPU. No downtime required**
- B. No downtime is required as number of OCPU can be increased from OCI console, but users have to be informed that they must not use any application for at least one hour
- C. Plan for a one-hour downtime and increase the number of OCPU while database is offline
- D. Call Oracle Cloud Support and raise a request to increase number of OCPU. Expect a downtime of approximately one hour

Answer: A

Explanation:

For an "Autonomous Database," the DBA can "Open the database in OCI Console and increase the number of OCPU. No downtime required" (C). Autonomous Database supports dynamic scaling of OCPUs online, with no service interruption, leveraging its self-managing capabilities. Options A and B involve unnecessary downtime, and D adds an unneeded user restriction. Oracle's documentation confirms zero-downtime OCPU scaling as a key feature.

NEW QUESTION # 39

What set of NoSQL-style APIs can be used in Autonomous JSON Database?

- **A. SODA (Simple Oracle Document Access)**
- B. DOSA (Document Open Solution Access)
- C. OASD (Oracle Application Storage Definition)
- D. OSDA (Oracle Simple Document Access)

Answer: A

Explanation:

The "Autonomous JSON Database" supports NoSQL-style document access through "SODA" (Simple Oracle Document Access) APIs (B). SODA provides a simple, intuitive interface for developers to interact with JSON documents stored in the database using operations like insert, query, and update, without requiring SQL knowledge. Options A ("OASD"), C ("DOSAS"), and D ("OSDA") are not recognized API sets in Oracle's documentation. SODA is explicitly documented as the standard NoSQL API for Autonomous JSON Database, aligning with Oracle's converged database strategy to support multiple data models.

NEW QUESTION # 40

Supply Side is data that is passive and means something. What two models and libraries are included in the supply side?

- **A. Business rules**
- B. Reports
- C. Technical definitions of business terms
- **D. Domain objects**

Answer: A,D

Explanation:

In the Oracle Data Platform, the "Supply Side" refers to foundational data elements that are passively collected and structured to provide meaning within the data ecosystem. According to Oracle's official documentation, the supply side includes "Business rules" (A), which define the logic and policies governing data usage, ensuring consistency and compliance, and "Domain objects" (B), which represent structured entities or concepts within a business domain, forming the backbone of data modeling. "Technical definitions of business terms" (C) pertain to metadata management, and "Reports" (D) are outputs rather than core supply-side models. Oracle's Data Platform Foundations emphasize business rules and domain objects as key components of the supply side for data integration and processing.

NEW QUESTION # 41

How does the Converged Database help to access data using an API?

- **A. A REST API is automatically generated on top of SQL or stored procedures**

- B. Developers can point their application to the location of ADB Wallet which integrates all REST API calls
- C. Each database comes with a REST-enabled compute instance to provide access to data
- D. The database provides only one universal REST interface which makes integration of applications extremely agile

Answer: A

Explanation:

The "Converged Database" facilitates API access by "A REST API is automatically generated on top of SQL or stored procedures" (B), using Oracle REST Data Services (ORDS). This allows developers to expose database logic as RESTful endpoints without manual coding. Option A is incorrect, as no separate compute instance is provided. Option C oversimplifies, as multiple REST interfaces can be created, not just one. Option D misrepresents the ADB Wallet's role, which is for security, not API generation. Oracle's documentation highlights ORDS auto-generation as a converged feature.

NEW QUESTION # 42

Oracle Data Lakehouse streamlines the integration, storage, and processing of data. Which two services are used for persistence of the data in Lakehouse?

- A. OCI Data Catalog
- B. OCI GoldenGate
- C. OCI Object Storage
- D. Autonomous Database

Answer: C,D

Explanation:

In Oracle's Data Lakehouse architecture, data persistence refers to the storage layer where data is durably maintained. "Autonomous Database" (B) provides a managed, self-tuning relational database for structured data persistence, supporting SQL-based workloads. "OCI Object Storage" (D) offers scalable, durable storage for unstructured and semi-structured data, such as files, images, and logs, serving as the data lake component of the Lakehouse. "OCI Data Catalog" (A) is a metadata management service, not a persistence layer, and "OCI GoldenGate" (C) handles data replication and integration, not direct storage. Oracle's Lakehouse documentation identifies Autonomous Database and OCI Object Storage as the primary persistence services.
