Oracle Data Platform 2025 Foundations Associate Sample Questions (Q28-Q33):

NEW QUESTION # 28

Which Oracle Cloud Infrastructure storage platform is used by MySQL Database Service for all data storage?

- A. Object Storage
- B. Archive Storage
- C. File Storage
- **D. Block Volume Storage**

Answer: D

Explanation:

The "MySQL Database Service" on Oracle Cloud Infrastructure uses "Block Volume Storage" (C) for all data storage. Block Volume provides high-performance, persistent block storage that is directly attached to compute instances running the MySQL database, ensuring low-latency access for transactional and operational workloads. "Archive Storage" (A) is for long-term, infrequently accessed data, "Object Storage" (B) is for unstructured data, and "File Storage" (D) is for shared file systems—none of which suit the primary storage needs of a MySQL database. Oracle's MySQL Database Service documentation confirms Block Volume as the default storage platform.

NEW QUESTION # 29

What is the FINAL release supporting the non-CDB architecture?

- A. Oracle Database 21c
- B. Oracle Database 23c
- C. Oracle Database 18c
- **D. Oracle Database 19c**

Answer: D

Explanation:

The final release supporting the "non-CDB (non-Container Database)" architecture is "Oracle Database 19c" (B). Oracle deprecated the non-CDB architecture starting with 20c (never fully released) and mandated the multitenant architecture (CDB with PDBs) from 21c onward. 19c, as a long-term support release, was the last to support non-CDB databases, with Oracle recommending migration to multitenant in subsequent versions like 23c. Oracle's documentation confirms 19c as the end of non-CDB support.

NEW QUESTION # 30

Which three are required for provisioning an Oracle Autonomous Database instance?

- **A. Workload Type**
- B. Number of Tablespace

- C. Number of CPUs
- D. Backup Location FRA Size

Answer: A,C,D

Explanation:

Provisioning an "Oracle Autonomous Database" requires "Number of CPUs" (A) to define compute resources and "Workload Type" (D) (e.g., Transaction Processing, Data Warehouse) to configure the instance's purpose. "Number of Tablespaces" (B) is not specified (managed automatically), and "Backup Location FRA Size" (C) is not a user-defined parameter (backups are handled by Oracle). Oracle's provisioning documentation lists CPUs and workload type as mandatory.

NEW QUESTION # 31

What are two typical reasons why customers CANNOT move their database into the public cloud?

- A. Total Cost of Ownership in public cloud is higher than on-premises
- B. Putting data in the cloud would break data residency rules
- C. Public cloud does not provide storage for more than 10TB
- D. Regulations that prevent moving data into the public cloud

Answer: B,D

Explanation:

Customers may not move databases to the public cloud due to "Putting data in the cloud would break data residency rules" (A), where laws mandate data remain in specific regions, and "Regulations that prevent moving data into the public cloud" (B), such as industry-specific compliance requirements (e.g., GDPR, HIPAA). "Total Cost of Ownership in public cloud is higher" (C) is a consideration but not a universal barrier, and "Public cloud does not provide storage for more than 10TB" (D) is false, as OCI offers vast storage options. Oracle's cloud adoption guides cite residency and regulatory constraints as common blockers.

NEW QUESTION # 32

Which two are true about the Autonomous JSON Database?

- A. Applications cannot be built without SQL
- B. A DBA is required
- C. Accessed via document APIs
- D. Instant auto-scaling

Answer: C,D

Explanation:

The "Autonomous JSON Database" is "Accessed via document APIs" (A), such as SODA, for NoSQL-style operations, and offers "Instant auto-scaling" (D) for compute and storage with no downtime. "Applications cannot be built without SQL" (B) is false, as document APIs suffice, and "A DBA is required" (C) is incorrect due to its self-managing nature. Oracle's documentation highlights these autonomous and API-driven features.
