We are confident in the ability of 1Z0-182 exam torrent and we also want to our candidates feel confident in our certification exam materials. For this reason, all questions and answers in our 1Z0-182 valid dumps are certified and tested by our senior IT professionals. And we guarantee that if you failed the certification exam with our 1Z0-182 Pdf Torrent, we will get your money back to reduce your loss.

Although it is difficult for you to prepare for 1Z0-182 exam, once you obtain the targeted exam certification, you will have a vast development prospects in IT industry. So what we can do is to help you not waste your efforts on the exam preparation. The Reliability and authority of 1Z0-182 Exam software on our Pass4cram has been recognized by majority of our customers, which will be found when you download our free demo. We will try our best to help you pass 1Z0-182 exam successfully.

Free PDF Quiz 2025 Oracle 1Z0-182 Fantastic Valid Exam Cost

The modern Oracle world is changing its dynamics at a fast pace. To stay and compete in this challenging market, you have to learn and enhance your in-demand skills. Fortunately, with the Oracle Database 23ai Administration Associate (1Z0-182) certification

exam you can do this job nicely and quickly. To do this you just need to enroll in the 1Z0-182 certification exam and put all your efforts to pass the Oracle Database 23ai Administration Associate (1Z0-182) certification exam. After successful competition of the Oracle 1Z0-182 certification, the certified candidates can put their career on the right track and achieve their professional career objectives in a short time period.

Oracle Database 23ai Administration Associate Sample Questions (Q86-Q91):

NEW QUESTION # 86

Which three statements are true about the Oracle Database server during and immediately after SHUTDOWN TRANSACTIONAL?

- A. Uncommitted transactions are allowed to continue to the next ROLLBACK.
- B. Sessions remain connected even if they are not running a transaction.
- C. Uncommitted transactions are allowed to continue to the next COMMIT.
- D. Instance recovery occurs automatically during the shutdown.
- E. New connection requests made to the database instance are refused.

Answer: B,C,E

Explanation:

- A .False. Recovery happens on startup, not shutdown.
- B .False. TRANSACTIONAL waits for commits or rollbacks, then disconnects.
- C .True. New connections are blocked during shutdown.
- D .True. Inactive sessions persist until shutdown completes.
- E .True. Active transactions can commit before disconnection.

NEW QUESTION # 87

Which statement is true about database links?

- A. A public database link can be created only by SYS.
- B. A public database link can be used by any user allowing remote database instance connection for selecting schema data.
- C. A database link can be created only between two Oracle databases.
- D. Private database link creation requires the same user to exist in both the local and the remote databases.
- E. A database link created in a database allows a connection from that database's instance to the target database's instance for selecting schema data.

Answer: E

Explanation:

- A .False. Links can connect to non-Oracle DBs via gateways.
- B .False. No such user requirement; authentication is separate.
- C .False. Any user with CREATE PUBLIC DATABASE LINK can create one.
- D .True. Links enable remote schema access (e.g., SELECT * FROM emp@remote).
- E .False. Public links allow access, but privileges on remote objects are needed.

NEW QUESTION # 88

What are Oracle Database Metrics?

- A. Oracle Database Metrics are part of Oracle Enterprise Manager Cloud Control's Notification system used to email alerts.
- B. Oracle Database Metrics are a set of measured statistics per unit of time (per second), transaction, or sessions that are used to evaluate performance.
- C. Oracle Database Metrics monitor performance using thresholds to generate alerts.
- D. Oracle Database Metrics are a set of statistics built in Oracle Enterprise Manager Cloud Control and used for automation.
- E. Oracle Database Metrics are part of the Oracle Database Notification system to email information about major database events.

Answer: B,C

Explanation:

- A .True. Metrics (e.g., V\$SYSMETRIC) use thresholds for alerts.
- B .False. Metrics aren't tied to email notifications directly.
- C .True. Metrics measure rates (e.g., IOPS, transactions/sec).
- D .False. EMCC uses metrics, but they're DB-level, not EM-specific.
- E .False. Metrics exist in the DB, not just EMCC.

NEW QUESTION # 89

Which two statements are true about User Authentication in an Oracle Database?

- A. Password authentication must be used for system-privileged administrative users.
- **B. Operating System authentication may be used for system-privileged administrative users.**
- **C. Password File authentication must be used for system-privileged administrative users.**
- D. Password File authentication is supported for any type of database user.
- E. REMOTE_LOGIN_PASSWORDFILE must be set to EXCLUSIVE to permit password changes for system-privileged administrative users.

Answer: B,C

Explanation:

User authentication in Oracle 23ai determines how users (especially administrative ones) connect to the database. Let's analyze each option with extensive detail:

A . Operating System authentication may be used for system-privileged administrative users.

True. OS authentication allows users mapped to OS accounts (e.g., ops\$oracle) to connect without a password, often used for administrative users like SYS or SYSTEM. This is configured by creating an externally authenticated user (e.g., CREATE USER "OPS\$ORACLE" IDENTIFIED EXTERNALLY) and relies on the OS to verify identity.

Mechanics:When a user logs in via sqlplus / as sysdba, Oracle checks the OS user against the dba group (Unix) or ORA_DBA (Windows). If matched, no password is needed, leveraging OS security.

Practical Use:Common for DBAs managing local instances, reducing password management overhead.

Edge Case:Requires REMOTE_LOGIN_PASSWORDFILE=NONE for exclusive OS auth, but this isn't mandatory if a password file exists alongside.

Historical Note:Introduced in early Oracle versions, this remains a robust option in 23ai for local admin access.

B . Password authentication must be used for system-privileged administrative users.

False. "Must" is incorrect; password authentication (e.g., sqlplus sys/password) is an option, not a requirement. OS authentication or password file authentication can also be used for users like SYS. This option overstates the necessity of password-based login.

Why Incorrect:Oracle's flexibility allows multiple methods, contradicting the absolute phrasing here.

C . Password File authentication is supported for any type of database user.

False. Password file authentication is restricted to users with SYSDBA, SYSOPER, or similar system privileges (e.g., SYSBACKUP). Regular users (e.g., HR) can't use the password file (orapw<sid>); they rely on database authentication (passwords stored in the DB) or external methods.

Mechanics:The password file stores hashed credentials for privileged users, checked during remote AS SYSDBA logins.

Why Incorrect:Extending this to "any user" ignores Oracle's security model limiting password file usage.

D . REMOTE_LOGIN_PASSWORDFILE must be set to EXCLUSIVE to permit password changes for system-privileged administrative users.

False. REMOTE_LOGIN_PASSWORDFILE=EXCLUSIVE allows a dedicated password file for one instance, enabling password changes via ALTER USER SYS IDENTIFIED BY newpass. However, SHARED mode also permits changes for SYS, though not for other users added to the file. The "must" overstates the requirement; it's sufficient, not necessary.

Mechanics:EXCLUSIVE locks the file to one DB, while SHARED allows multiple DBs to use it, with restrictions on non-SYS users.

E . Password File authentication must be used for system-privileged administrative users.

True. For remote administrative access (e.g., sqlplus sys/password@orcl as sysdba), a password file is mandatory when REMOTE_LOGIN_PASSWORDFILE is EXCLUSIVE or SHARED. Local OS authentication is an alternative, but for network-based admin tasks, the password file is required, making this statement true in that context.

Mechanics:Set via orapwd (e.g., orapwd file=orapworcl password=oracle entries=10), enabling remote SYSDBA logins.

Edge Case:If REMOTE_LOGIN_PASSWORDFILE=NONE, only OS auth works locally, but this isn't the default or typical setup.

NEW QUESTION # 90

Which two statements are true about the configuration and use of UNDO?

- A. UNDO_RETENTION specifies how long all types of UNDO are retained.
- B. Unexpired UNDO is always retained.
- C. UNDO_RETENTION specifies for how long Oracle attempts to keep unexpired UNDO.
- D. Active UNDO is always retained.
- E. UNDO_RETENTION specifies for how long Oracle attempts to keep expired and unconsumed UNDO.

Answer: C,D

NEW QUESTION # 91

.....

Although we have carried out the 1Z0-182 exam questions for customers, it does not mean that we will stop perfecting our study materials. Our experts are still testing new functions for the 1Z0-182 study materials. Even if you have purchased our study materials, you still can enjoy our updated 1Z0-182 Practice Engine. We will soon upload our new version of our 1Z0-182 guide braindumps into our official websites.
