Oracle Business Intelligence Foundation Suite 11g Essentials Sample Questions (Q101-Q106):

NEW QUESTION # 101

Which two options are valid Repository Variable names?

- A. USER
- B. Date
- C. CurrentDay
- D. CurrentMonth

Answer: C,D

Explanation:

Explanation/Reference:

CurrentDay and CurrentMonth can be calculated by a sql statement.

Note:

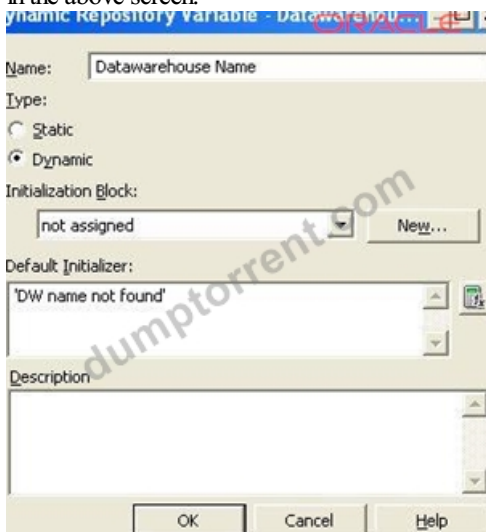

REPOSITORY VARIABLE(DYNAMIC)

Initialized when BI server is started

Assigned value dynamically based on the result of a query

Value is dependent of the sql provided in Initialization Block

Create a dynamic variable and provide a Name and Default Initializer. Create a new initialization block by clicking on the New button in the above screen.

Provide Initialization Block variable Name

NEW QUESTION # 102

Which of the following characteristics pertain to a "ragged" hierarchy?

- A. All values can have a maximum of six levels.
- B. A branch of the hierarchy may have a different number of levels than other branches.
- C. It can only be stored in an XML structure.
- D. It creates multiple levels of hierarchy in the databasetable.

Answer: B

Explanation:

Ragged Hierarchies are hierarchies where some routes down the hierarchy are longer than others; for example, you may have an organizational hierarchy for salespeople where the overall boss has two assistant managers, one of them works on their own and another has three sales managers under them; some of those sales manager may have sales staff under them, and some sales staff may have trainees under them.

NEW QUESTION # 103

DSNs are set up for access to which data sources?

- A. IBM Data Sources
- **B. ODBC Data Sources**
- C. Teradata Data Sources
- D. Oracle Data Sources

Answer: B

Explanation:

The principal connection to an OBI Server inside the Oracle BI System is made through an Odbc Connection.

OBI Server can handle multiple repository but you can connect to only one at the same time by DSN Odbc Connection. Therefore, you must set up an ODBC connection for each repository.

NEW QUESTION # 104

An organization has re-implemented one of its systems but has not moved history. One database has data for all years up to 2010 and the other has data for years from 2011 to the present. The organization needs data from the years 2010 and 2011 on a single report. How can you model this in the RPD?

- A. By creating two Logical Fact Tables for each database
- **B. By creating one logical table sources and checking the "This Source should be combined with other sources at this level" box**
- C. By creating two logical table sources and checking the "This Source should be combined with other sources at this level" box leaving the Fragmentation content area blank.
- D. By creating joins in the physical model so it looks like a single table
- E. By creating two logical table sources, that specify in Content tab using the Fragmentation content areas to specify the years for each source

Answer: B

Explanation:

Note: This source should be combined with other sources at this level (check box)

Description: Check this box when data sources at the same level of aggregation do not contain overlapping information. In this situation, all sources must be combined to get a complete picture of information at this level of aggregation.

Note 2: To use a source correctly, the Analytics Server has to know what each source contains in terms of the business model. Therefore, you need to define aggregation content for each logical table source of a fact table. The aggregation content rule defines at what level of granularity the data is stored in this fact table.

Use the Content tab of the Logical Table Source dialog box to define any aggregate table content definitions, fragmented table definitions for the source, and Where clauses (if you want to limit the number of rows returned).

Reference: Siebel Business Analytics Server Administration Guide > Creating and Administering the Business Model and Mapping Layer in a Repository > Creating and Administering Logical Table Sources (Mappings) > Defining Content of Logical Table Sources

NEW QUESTION # 105

How do you get the BI plug-in for MS Office?

- A. By downloading it from Microsoft Server
- **B. By downloading it from the BI Server**

- C. By contacting the administrator
- D. By downloading it from the Database Server

Answer: B

Explanation:

Explanation/Reference:

Download and installation of the client

The client install executable is available for download from the More Products menu in Oracle BI Interactive Dashboards and Oracle BI Answers.

See picture below.
