

1Z0-770 Accurate Test | 1Z0-770 Exam Book

1Z0-770

Correct Answer: B

Explanation/Reference:

Option 1: While writing custom CSS code can certainly be useful for further customizing the appearance of an interactive report, it is not the primary means of configuring the layout. The Report Layout dialog box is where you can choose the layout style, add or remove columns, set aggregation and sorting options, and more. Option 2: Correct! The Report Layout dialog box is where you can choose the layout style, add or remove columns, set aggregation and sorting options, and more. While writing custom CSS code can certainly be useful for further customizing the appearance of an interactive report, it is not the primary means of configuring the layout. Option 3: Changing the actual SQL query of the report would not be a valid way to customize the layout. Although modifying the query could change the data displayed, it would not control how the data is presented to the user. Additionally, making changes to the query could potentially affect other aspects of the application. Option 4: Modifying the underlying table structure is not a valid way to customize the layout of a report. Although making changes to the table structure could potentially affect the data displayed in the report, it would not control how the data is presented to the user.

QUESTION: 9

Which of the following is an advantage of using template options for managing user interface components in Oracle APEX Cloud Developer Professional?

- Option A : Templates options can be customized using CSS styles
- Option B : Template options require no coding experience to use
- Option C : Template options allow for easy global changes to UI components
- Option D : Template options are not compatible with dynamic actions

Correct Answer: C

Explanation/Reference:

Option 1: This answer is incorrect because template options can be modified using Cascading Style Sheets (CSS) styles to meet the specific UI requirements, which is one of the main advantages of using template options in Oracle APEX Cloud Developer Professional. Option 2: This answer is incorrect because although it is true that no coding experience is needed to use template options, this is not the main advantage of using them in this context. Option 3: This answer is correct because the main advantage of using template options for managing user interface components in Oracle APEX Cloud Developer Professional is that it allows for easy global changes to UI components. This means that you can make changes to one central location, and those changes will be automatically applied to all components that use that template. Option 4: This answer is incorrect because template options are supported by dynamic actions in Oracle APEX Cloud Developer Professional, which makes them a

Having a Oracle Certification 1Z0-770 Exam certificate can help people who are looking for a job get better employment opportunities in the IT field and will also pave the way for a successful IT career for them.

Oracle 1Z0-770 Exam covers a range of topics related to APEX development, including database design, application development, security, integration, and deployment. 1Z0-770 exam consists of 70 multiple-choice questions, and candidates are given 105 minutes to complete it. To pass the exam, candidates must score at least 63% or higher. Earning the Oracle APEX Developer Professional certification demonstrates a high level of proficiency in APEX development and can help professionals advance their careers in this field.

2025 1Z0-770 Accurate Test | Authoritative 1Z0-770 100% Free Exam Book

Many clients may worry that if they buy our product they will fail in the exam but we guarantee to you that our 1Z0-770 study questions are of high quality and can help you pass the exam easily and successfully. Our product boosts 99% passing rate and high hit rate so you needn't worry that you can't pass the exam. Our 1Z0-770 exam torrent is compiled by experts and approved by experienced professionals and updated according to the development situation in the theory and the practice. Our Oracle APEX Developer Professional guide torrent can simulate the exam and boosts the timing function. The language is easy to be understood and makes the learners have no learning obstacles. So our 1Z0-770 Exam Torrent can help you pass the exam with high possibility.

Oracle APEX Developer Professional Sample Questions (Q57-Q62):

NEW QUESTION # 57

Select the three types of Facets you can create in APEX.

- A. Text Area
- B. Checkbox Group
- C. Range
- D. Input Field

Answer: B,C,D

Explanation:

Explanation

A facet is a type of component that provides a set of display values and return values for a faceted search region or a smart filters region. A facet can be based on either static values or dynamic values from a list of values (LOV). A facet can also have different display styles depending on its type and settings. Three of the types of facets that you can create in APEX are:

Range: A range facet displays numeric values in either buckets or sliders that users can select or adjust to filter the search results. A range facet can have either static values or dynamic values based on an LOV or SQL query.

Checkbox Group: A checkbox group facet displays multiple options that users can select or deselect to filter the search results. A checkbox group facet can have either static values or dynamic values based on an LOV or SQL query.

Input Field: An input field facet displays a text field that users can enter text to filter the search results.

An input field facet does not have any values but uses an operator to compare the user input with the data.

NEW QUESTION # 58

Which three of the following statements are TRUE about Faceted Search?

- A. You can create only 5 facets per page
- B. After the end user changes a facet, the results, dependent facets, and occurrence counts refresh immediately.
- C. The facets are displayed on the left and upper part of the screen
- D. The right side of the page features a Search Results region, which can display as a classic report or a cards report.

Answer: B,C,D

Explanation:

Explanation

A faceted search is a type of component that enables users to filter information easily and intuitively by selecting the options in each facet. A faceted search consists of a faceted search region and a search results region. The faceted search region displays on the left and upper part of the screen and shows possible values and occurrence counts for each facet. The search results region displays on the right side of the screen and shows the data that matches the selected facet values. The search results region can display as either a classic report or a cards report. Three of the statements that are true about faceted search are:

After the end user changes a facet, the results, dependent facets, and occurrence counts refresh immediately. This feature provides instant feedback to the user and allows them to refine their search criteria without reloading the page.

The right side of the page features a Search Results region, which can display as a classic report or a cards report. A classic report displays data in a tabular format with columns and rows. A cards report displays data in a grid of cards with images and text.

The facets are displayed on the left and upper part of the screen. This layout provides a clear separation between the facets and the results and allows users to see and access all the facets without scrolling.

NEW QUESTION # 59

In APEX, you can choose which three of the following Authentication methods?

- A. Authorization Scheme
- B. Built-in Authentication Scheme
- C. No Authentication
- D. Custom Authentication Scheme

Answer: B,C,D

Explanation:

Explanation

In Oracle APEX, you can choose from different authentication methods to establish a user's identity and control access to your application. Authentication may require a user to provide some type of credentials, such as a user name and password, or could involve the use of digital certificates or a secure key. Three of the authentication methods that you can choose in Oracle APEX are: Custom Authentication Scheme: This method allows you to create your own authentication logic using PL/SQL code or an external web service. You can also customize the login page and session management for your application.

No Authentication (using DAD): This method adopts the current database user as the authenticated user.

This approach can be used in combination with a mod_plsql Database Access Descriptor (DAD) configuration that uses basic authentication to set the database session user.

Built-in Authentication Scheme: This method allows you to use one of the preconfigured authentication schemes that ship with Oracle APEX, such as Open Door Credentials, LDAP Directory, Social Sign-In, and so on.

NEW QUESTION # 60

You can apply an authorization scheme for which three of the following components?

- A. Specific control such as region,item or button
- B. A session
- C. An entire application
- D. A page

Answer: A,C,D

Explanation:

Explanation

You can apply an authorization scheme for the following components in APEX:

A specific control such as a region, item, or button. You can select an authorization scheme from the Authorization Scheme list on the attributes page of the control. This will control the rendering and processing of the control based on the user privileges¹².

A page. You can select an authorization scheme from the Authorization Scheme list on the Security page of the page definition. This will control the access to the page based on the user privileges¹².

An entire application. You can select an authorization scheme from the Authorization Scheme list on the Security Attributes page of the application definition. This will control the access to the entire application based on the user privileges¹².

You cannot apply an authorization scheme for a session, as a session is not a component in APEX. A session is a stateful connection between a browser and the APEX engine that persists across multiple requests and responses³. You can control session security by using session state protection, session expiration, and session isolation⁴.

NEW QUESTION # 61

You can create a report in which of the three following methods?

- A. Create a report when you create a new database application
- B. Create a report from Object Browser
- C. Create a report region on a page in an application
- D. Create a report as a new page in an application

Answer: A,C,D

Explanation:

Explanation

You can create a report in any of these three methods:

Create a report as a new page in an application by using the Create Page Wizard. This wizard guides you through the steps of selecting a page type, defining attributes, selecting a source (such as SQL query or table), and adding items or buttons.

Create a report when you create a new database application by using the Create Application Wizard.

This wizard allows you to generate one or more reports based on existing tables or views in your schema. You can also create a report and form on the same table or view.

Create a report region on a page in an application by using the Page Designer. This tool allows you to drag and drop a region type (such as Classic Report, Interactive Report, or Interactive Grid) onto the page and define its attributes and source.

The other option is incorrect because:

You cannot create a report from Object Browser. Object Browser is a tool that allows you to view and manage the database objects in your schema, such as tables, views, indexes, etc. You can only run SQL queries or scripts from this tool, not create reports.
