1Z0-770 Exam Torrent & 1Z0-770 Test Collection & 1Z0-770 Top Quiz

Our 1Z0-770 learning question can provide you with a comprehensive service beyond your imagination. 1Z0-770 exam guide has a first-class service team to provide you with 24-hour efficient online services. Our team includes industry experts & professional personnel and after-sales service personnel, etc. Industry experts hired by 1Z0-770 exam guide helps you to formulate a perfect learning system, and to predict the direction of the exam, and make your learning easy and efficient. Our staff can help you solve the problems that 1Z0-770 Test Prep has in the process of installation and download. They can provide remote online help whenever you need. And after-sales service staff will help you to solve all the questions arising after you purchase 1Z0-770 learning question, any time you have any questions you can send an e-mail to consult them. All the help provided by 1Z0-770 test prep is free. It is our happiest thing to solve the problem for you. Please feel free to contact us if you have any problems.

To prepare for the Oracle 1Z0-770 Exam, candidates should have a solid understanding of APEX development and should have practical experience working with APEX applications. Oracle offers training courses, online resources, and practice exams to help candidates prepare for the exam. It is also recommended that candidates have a good understanding of SQL, PL/SQL, and database design.

Oracle APEX Developer Professional Sample Questions (Q75-Q80):

NEW QUESTION # 75
Choose the three different ways in which you can add a checkbox to a page.

- A. Add a checkbox from the Property Editor
- B. Right click Body in the Rendering Tree and add a New Page Item as Checkbox Type.
- C. Drag and drop the checkbox item into the Layout pane
- D. Use the context sensitive menu in the Gallery pane.

Answer: B,C,D

Explanation:
Explanation
There are three different ways in which you can add a checkbox to a page in APEX:
Drag and drop the checkbox item into the Layout pane: In Page Designer, you can drag and drop items from the Gallery pane into the Layout pane to create them on your page. To create a checkbox item, expand the Items node in the Gallery pane and drag and drop Checkbox into the Layout pane.
Right click Body in the Rendering Tree and add a New Page Item as Checkbox Type: In Page Designer, you can right click any node in the Rendering tree and select Create to create a new component under that node. To create a checkbox item under the Body node, right click Body and select Create > New Page Item > Checkbox.
Use the context sensitive menu in the Gallery pane: In Page Designer, you can use the context sensitive menu in the Gallery pane to create items on your page. To create a checkbox item using this method, expand the Items node in the Gallery pane and right click Checkbox. Then select Create Checkbox.

NEW QUESTION # 76
Which statement is true about the Link Column attribute of an interactive report?

- A. It is not possible to include a custom target in Link Column
- B. If you select Link Column, it is always displayed as the last column in the report.
- C. A Link Column cannot be sorted, hidden, or moved by an end user.
- D. It is not possible to exclude Link Column.

Answer: C

Explanation:
Explanation
A Link Column is a special column type that you can define for an interactive report to create a link to another page, URL, or custom target. A Link Column is always displayed as the first column in the report, regardless of the order of the columns in the query. A Link Column cannot be sorted, hidden, or moved by an end user using the Actions menu or the column header. However, a developer can change the position and visibility of a Link Column by editing the report attributes in Page Designer.

NEW QUESTION # 77
The Movies faceted search report is filtered only when the Apply button for a selected facet is clicked. What must be done in the Page Designer so that report filtering is automatically executed when any facet value changes?

- A. Navigate to the faceted search region Attributes, and turn off the show Facet Name attribute.
- B. Navigate to the faceted search region Attributes, and disable the Batch Facet Changes attribute
- C. Navigate to the faceted search region Attributes, and turn off the show Facet Name attribute. Then, navigate to each facet and in the Property Editor, turn on client-Side Filtering.
- D. Navigate to each facet and then in the Property Editor, turn on client-Side Filtering.

Answer: B

Explanation:
Explanation
A faceted search page is a type of page that allows end users to filter data by applying one or more facets. A facet is a set of filters based on a column or expression. By default, when end users select a facet value, they need to click on an Apply button for that facet to apply the filter to the report. To make report filtering automatically executed when any facet value changes, you need to navigate to the faceted search region Attributes, and disable the Batch Facet Changes attribute. The Batch Facet Changes attribute determines whether end users need to click on an Apply button for each facet or not. When this attribute is disabled, the report is automatically refreshed when any facet value changes. The other options are not relevant to the report filtering behavior. Verified References: [Faceted Search Attributes - Oracle Help Center], [Batch Facet Changes - Oracle APEX]

NEW QUESTION # 78
When you create a Dynamic Action, you specify the event that causes the dynamic action to fire.
Choose the categories these events are classified into.

- A. Browser Events
- B. All of them
- C. Custom Events
- D. Component Events
- E. Framework Events

Answer: B

Explanation:
Explanation
The events that cause the dynamic action to fire are classified into five categories: Browser Events, Component Events, Custom Events, Framework Events, and jQuery Events1. Browser events are triggered by user interactions with the browser window, such as resize, scroll, or unload. Component events are triggered by user interactions with specific APEX components, such as interactive grids, interactive reports, or trees.
Custom events are user-defined events that can be triggered by other dynamic actions or JavaScript code.
Framework events are triggered by APEX framework actions, such as page load, page submit, or dialog close. jQuery events are triggered by user interactions with jQuery UI widgets, such as accordion, tabs, or date picker1.

NEW QUESTION # 79
Choose the three requirements for creating a REST Enabled SQL Reference.

- A. Activate REST Enabled SQL for the target schema on the remote database
- B. Set up any remote database
- C. Configure and enable the REST Enabled SQL service feature
- D. Install Oracle REST Data Services (ORDS) 19.x or later.

Answer: A,C,D

Explanation:
Explanation
To create a REST Enabled SQL Reference, you need to meet the following requirements:
Install Oracle REST Data Services (ORDS) 19.x or later. ORDS is a Java application that enables developers to create, publish, and manage RESTful web services for Oracle databases1.
Activate REST Enabled SQL for the target schema on the remote database. REST Enabled SQL is a feature of ORDS that allows you to execute any SQL or PL/SQL through a REST endpoint. You need to enable this feature for the schema that contains the data you want to access2.
Configure and enable the REST Enabled SQL service feature. This is a workspace-level setting that allows you to use REST Enabled SQL references in your APEX applications. You need to specify a path prefix and a secret for the REST Enabled SQL service3.
You do not need to set up any remote database, as long as it meets the ORDS and REST Enabled SQL requirements. You can use any Oracle database or MySQL database as a remote data source2.

NEW QUESTION # 80
......

Attempting these 1Z0-770 practice test questions, again and again, enhances your learning and eliminates errors in your readiness for the Oracle APEX Developer Professional certification exam.
