1Z0-770 Reliable Exam Simulations – High Pass-Rate Test Objectives Pdf for 1Z0-770: Oracle APEX Developer Professional

The core competitiveness of the 1Z0-770 exam practice questions, as users can see, we have a strong team of experts, the 1Z0-770 study materials are advancing with the times, updated in real time. Through user feedback recommendations, we've come to the conclusion that the 1Z0-770 learning guide has a small problem at present, in the rest of the company development plan, we will continue to strengthen our service awareness, let users more satisfied with our 1Z0-770 Study Materials, we hope to keep long-term with customers, rather than a short high sale.

Oracle APEX Developer Professional Sample Questions (Q126-Q131):

NEW QUESTION # 126

You must reference certain data from a dragged event under the Drag and Drop PL/SQL Code attribute of the Calendar component.

Examine this list:

1. The ID
2. The NEW_START_DATE
3. The NEW_END_DATE

How can these be referenced?

- A. :APEX\$PK_VALUE, APEX\$NEW START DATE and APEX\$NEW_END_DATE
- B. :APEX.PK_VALUE, :APEX.NEW START DATE and :APEX.NEW END DATE
- C. #APEXSPK VALUE#, #APEX\$NEW START DATE# and #APEX\$NEW END DATE#

- D. #APEX.PK_VALUE#, #APEX.NEW_START_DATE# and #APEX.NEW_END_DATE#

Answer: B

Explanation:

Explanation

d event under the Drag and Drop PL/SQL Code attribute of the Calendar component. This attribute allows you to write PL/SQL code to update the event row in the database after the user drags and drops an event on the calendar. To reference the ID, the new start date, and the new end date of the dragged event, you can use these bind variables: :APEX.PK_VALUE, :APEX.NEW_START_DATE and :APEX.NEW_END_DATE. These variables are automatically populated by APEX when the user performs a drag and drop action on the calendar. For example, you can write something like this:

UPDATE events

SET start_date = :APEX.NEW_START_DATE,

end_date = :APEX.NEW_END_DATE

WHERE id = :APEX.PK_VALUE;

NEW QUESTION # 127

You created a custom theme for an application. Examine these requirements: 1. The theme must be utilized by another application in the same workspace. 2. The master theme may still require changes. Which solution guarantees that any changes to the master theme are reflected in the copied theme?

- A. Subscribing the copied theme to the master theme and refreshing the theme
- B. Verifying the theme subscription
- C. Copying the changes made in the master theme to the copied theme
- D. Refreshing the templates

Answer: A

Explanation:

Explanation

A theme is a collection of templates and stylesheets that define the layout and appearance of an application.

You can create a custom theme for an application by using the Create Theme Wizard or by copying an existing theme. If you want to use a custom theme for another application in the same workspace, you can copy the theme to that application by using the Copy Theme option in Shared Components. However, if the master theme (the original theme) may still require changes, you need to subscribe the copied theme to the master theme and refresh the theme whenever there are changes in the master theme. This solution guarantees that any changes to the master theme are reflected in the copied theme by using a synchronization process that updates templates and stylesheets based on their subscription status. NEW QUESTION # 128

Select the two advantages of using One-click Remote Deployment.

- A. Simplify the process of deploying an application
- B. Deploy the app, and explicitly install the supporting objects in one-click.
- C. You need to access your production environment to import the app directly.
- D. Directly deploy your app definition along with the objects from the source system to the target system

Answer: B,D

Explanation:

Explanation

One-click remote application deployment is a feature in Oracle APEX that simplifies the process of deploying an application from one APEX instance to another using REST Enabled SQL references. REST Enabled SQL references are shared components that work with an Oracle REST Data Services (ORDS) REST Enabled SQL Service. One-click remote application deployment can authenticate through first party authentication (Basic Authentication), Schema Authentication (database username and password), or OAuth 2 Client Credentials.

Two of the advantages of using one-click remote application deployment are:

Deploy the app, and explicitly install the supporting objects in one-click. This advantage allows you to package the app definition along with the database objects, images, and seed data necessary for your application to run correctly using the Supporting Objects

functionality in APEX. You can then export and deploy this app and install the supporting objects in one-click without having to manually create or copy the database objects in the target system.

Directly deploy your app definition along with the objects from the source system to the target system.

This advantage allows you to avoid the intermediate step of exporting the app and its objects from the source system into files and then importing them into the target system. You can directly deploy your app and its objects from within your development environment to the remote production environment without having to access your production environment.

NEW QUESTION # 129

You want to enable anyone to access your application using a built-in login page that captures a user name.

Which authentication scheme would you choose?

- A. Social Sign-In
- B. Custom Authentication
- **C. Open Door Credentials**
- D. No Authentication

Answer: C

Explanation:

Explanation

Open Door Credentials is an authentication scheme that allows anyone to access your application using a built-in login page that captures a user name. You can use this scheme for testing purposes or for applications that do not require secure authentication. You can select this scheme from the Authentication Type list when creating or editing an authentication scheme. References:

[Understanding Authentication] and [Creating an Authentication Scheme]

NEW QUESTION # 130

Which of the following options in the Developer Toolbar enables you to customize the look and feel of the application?

- A. Quick Edit
- B. Session
- **C. Customize**
- D. Debug

Answer: C

Explanation:

Explanation

The Developer Toolbar is a component that appears at the bottom of every page in an Oracle APEX application when running in development mode. The Developer Toolbar provides quick access to various features and tools for developing and debugging an application. One of the options in the Developer Toolbar that enables developers to customize the look and feel of the application is Customize.

Customize: This option opens the Theme Roller tool that allows developers to modify the theme style of the application by changing colors, fonts, sizes, borders, shadows, and more. Developers can also create new theme styles or switch between existing ones using this option.

NEW QUESTION # 131

.....

Our professionals constantly keep testing our 1Z0-770 vce dumps to make sure the accuracy of our exam questions and follow the latest exam requirement. We will inform our customers immediately once we have any updating about 1Z0-770 Real Dumps and send it to their mailbox. The feedback of most customers said that most questions in our 1Z0-770 exam pdf appeared in the actual test.
