

# 1Z0-931-25 Accurate Answers & Test 1Z0-931-25 Pass4sure

BONUS!!! Download part of Valid Braindumps 1Z0-931-25 dumps for free: <https://drive.google.com/open?id=1osmJZgRsJJ-q1IrT140Qb7Bdm6L3JLVg>

Firstly, we have free trials of the 1Z0-931-25 exam study materials to help you know our products. Once you find it unsuitable for you, you can choose other types of the study materials. You will never be forced to purchase our 1Z0-931-25 test answers. Just make your own decisions. We can satisfy all your demands and deal with all your problems. Our online test engine and windows software of the 1Z0-931-25 Test Answers will let your experience the flexible learning style. Apart from basic knowledge, we have made use of the newest technology to enrich your study of the 1Z0-931-25 exam study materials. Online learning platform is different from traditional learning methods. One of the great advantages is that you will

## Oracle 1Z0-931-25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Data Lake Analytics with Autonomous Database: This section of the exam measures the skills of Big Data Engineers and explores how Autonomous Database can be used for analytics in data lake environments. It includes data ingestion, query optimization, and leveraging cloud-native analytics services, ensuring engineers can efficiently process and analyze large volumes of structured and unstructured data.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Autonomous Database Tools: This section of the exam measures the skills of Data Analysts and covers the tools available within Autonomous Databases for advanced data processing and analytics. It includes Oracle Machine Learning, APEX, and SQL Developer Web for database development, as well as data transformation, business model creation, data insights, and data analysis, allowing analysts to extract valuable insights from large datasets.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• Developing on Autonomous Database: This section of the exam measures the skills of Application Developers and focuses on developing and extending applications using Autonomous Database. It covers using generative AI for natural language queries, Autonomous JSON Database, Oracle Text for document search, location-based analysis with Autonomous Spatial, Autonomous Graph for data relationships, and integration with Object Storage, enabling developers to build intelligent, scalable applications.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>• Autonomous Database Dedicated: This section of the exam measures the skills of IT Architects and explores the workflows and functionality of Autonomous Database Dedicated and Autonomous Database Cloud@Customer. It includes provisioning dedicated resources, setting up OCI policies, monitoring infrastructure, scheduling maintenance tasks such as patching, and managing encryption keys for enhanced security. IT Architects will learn how to integrate dedicated database environments within their cloud strategy.</li></ul>

## Test 1Z0-931-25 Pass4sure - 1Z0-931-25 Updated Demo

When we are in some kind of learning web site, often feel dazzling, because web page appear too desultory. Absorbing the lessons of the 1Z0-931-25 test prep, will be all kinds of qualification examination classify layout, at the same time on the front page of the 1Z0-931-25 test materials have clear test module classification, so clear page design greatly convenient for the users, can let users in a very short period of time to find what they want to study, and then targeted to study. Saving the precious time of users, also makes the 1Z0-931-25 Quiz torrent look more rich.

### Oracle Autonomous Database Cloud 2025 Professional Sample Questions (Q57-Q62):

#### NEW QUESTION # 57

You see a clock icon in the Status column on the SQL Monitoring tab of Performance Hub. What does it indicate?

- A. The SQL statement completed its execution.
- B. The SQL statement is executing.
- C. The SQL statement did not complete either due to an error.
- **D. The SQL statement is queued.**

**Answer: D**

Explanation:

The Performance Hub in Autonomous Database provides real-time SQL monitoring with status indicators:

Correct Answer (A): A clock icon in the Status column indicates "The SQL statement is queued." This means the statement is waiting in a queue (e.g., due to resource limits or consumer group settings) and has not yet started executing.

Incorrect Options:

B: An executing statement typically shows a green progress bar or running icon, not a clock.

C: An error would display a red icon or error symbol, often with details in the UI.

D: A completed statement shows a checkmark or similar success indicator.

This visual cue helps identify resource contention or scheduling delays.

#### NEW QUESTION # 58

Which three security features are available in Oracle Autonomous Database Shared Infrastructure? (Choose three.)

- **A. Transparent Data Encryption**
- B. Data Redaction
- **C. Customer Managed Keys**
- D. Audit Vault
- **E. Database Vault**

**Answer: A,C,E**

Explanation:

Oracle Autonomous Database Shared Infrastructure offers built-in security features to protect data and ensure compliance. The three correct features are:

Customer Managed Keys (A): This feature allows customers to use their own encryption keys for Transparent Data Encryption (TDE), stored in Oracle Key Vault or OCI Vault. It gives control over key management, enhancing security by ensuring only the customer can decrypt data. For example, a company might generate a key in OCI Vault, link it to their ADB, and rotate it periodically, all managed outside Oracle's default keys.

Database Vault (D): Oracle Database Vault enforces fine-grained access controls, preventing unauthorized access to sensitive data even by privileged users (e.g., DBAs). In ADB shared infrastructure, it's available to restrict operations like SELECT on specific schemas, adding a layer of protection against internal threats. For instance, it could block an admin from viewing customer PII unless explicitly permitted.

Transparent Data Encryption (E): TDE is enabled by default in Autonomous Database, encrypting data at rest (e.g., in tablespaces, backups, and logs) using AES-256. This ensures that if physical storage is compromised, the data remains unreadable without the encryption key. Customers can opt for customer-managed keys (A) or use Oracle-managed keys, but TDE itself is always active.

The incorrect options are:

Audit Vault (B): Oracle Audit Vault is a separate product for centralized audit log management, not a built-in feature of ADB shared infrastructure. While ADB performs auditing, it doesn't include Audit Vault's advanced capabilities natively.

Data Redaction (C): Data Redaction (masking sensitive data in query results) is available in on-premises Oracle Database Enterprise Edition but is not supported in Autonomous Database shared infrastructure. ADB's managed nature limits such custom configurations, relying instead on TDE and Database Vault for security.

These features collectively ensure robust security with minimal customer effort in a shared environment.

### NEW QUESTION # 59

For someone that is not a service administrator to use SQL Developer Web, what package would you need to use to give them access?

- A. ORDS\_ADMIN.ENABLE\_SCHEMA
- B. ORDS\_ADMIN.GRANT\_SCHEMA
- C. ORDS\_PRIV.ENABLE\_SCHEMA
- D. SQLDEV\_ADMIN.GRANT\_SCHEMA

**Answer: A**

Explanation:

SQL Developer Web in Autonomous Database relies on Oracle REST Data Services (ORDS) for access. The correct package is:

ORDS\_ADMIN.ENABLE\_SCHEMA (B): To allow a non-admin user (e.g., ANALYST1) to use SQL Developer Web, the ADMIN user executes ORDS\_ADMIN.ENABLE\_SCHEMA to enable the schema for ORDS access. This procedure activates the schema for RESTful services, granting privileges like CONNECT and SELECT implicitly for web-based SQL execution.

Example:

BEGIN

ORDS\_ADMIN.ENABLE\_SCHEMA(p\_schema => 'ANALYST1');

END;

After this, the user accesses SQL Developer Web via a URL (e.g., [https://<adb-host>/ords/analyst1/\\_sdw](https://<adb-host>/ords/analyst1/_sdw)), logging in with their database credentials. This is necessary because SQL Developer Web runs on ORDS, and only enabled schemas can interact with it. For instance, an analyst might query `SELECT * FROM sales` in the web interface post-enablement, without needing full admin rights.

The incorrect options are:

ORDS\_ADMIN.GRANT\_SCHEMA (A): No such procedure exists in ORDS\_ADMIN. Granting is handled via database roles/privileges (e.g., GRANT CONNECT), not a specific ORDS grant function.

ORDS\_PRIV.ENABLE\_SCHEMA (C): There's no ORDS\_PRIV package; this might confuse with ORDS\_ADMIN. The correct package is ORDS\_ADMIN for schema enablement.

SQLDEV\_ADMIN.GRANT\_SCHEMA (D): No SQLDEV\_ADMIN package exists. SQL Developer Web access is managed through ORDS, not a separate SQL Developer-specific package.

ORDS\_ADMIN.ENABLE\_SCHEMA is the standard, secure way to enable non-admin access to this tool in ADB.

### NEW QUESTION # 60

Where can a user's public SSH key be added on the Oracle Cloud Infrastructure Console in order to execute API calls?

- A. On the Autonomous Database Console
- B. SSH keys cannot be added from console. They have to be added using REST APIs only
- C. Navigate to Identity, select Users panel on the console and select "Add Public Key"
- D. SSH keys are not required in Oracle Cloud Infrastructure

**Answer: C**

Explanation:

SSH keys in OCI are used for secure access, but their role in API calls needs clarification. The correct answer is:

Navigate to Identity, select Users panel on the console and select "Add Public Key" (D): This is the correct process, but with a caveat-it's about API authentication, not SSH for API calls per se. In OCI, API calls are authenticated using API keys (RSA key pairs), not SSH keys directly. To enable API access for a user, you generate a public/private key pair (e.g., using openssl), then add the public key in the OCI console:

Go to "Identity & Security" > "Users."

Select the user (e.g., john.doe).

Under "API Keys," click "Add API Key."

Upload the public key (e.g., ~/.oci/oci\_api\_key\_public.pem).

This associates the key with the user, allowing API calls (e.g., oci db autonomous-database list) authenticated via the private key and config file (e.g., ~/.oci/config). The question's phrasing ("SSH key") likely misuses terminology, intending "API key," as SSH keys are for compute instance access, not APIs. For example, a user might add a key to call the ADB API, securing requests with a signature.

The incorrect options are:

On the Autonomous Database Console (A): The ADB console manages database-specific settings (e.g., wallets), not user API keys, which are handled at the tenancy level under Identity.

SSH keys are not required in Oracle Cloud Infrastructure (B): False in general-SSH keys are needed for compute instances-but misleading here, as API calls use API keys, not SSH keys. Authentication (e.g., via tokens or keys) is required for APIs.

SSH keys cannot be added from console. They have to be added using REST APIs only (C): False. The console supports adding API keys under the Users panel; REST APIs (e.g., CreateApiKey) are an alternative, not the only method.

The correct path reflects OCI's user management for API access, despite the SSH terminology confusion.

### NEW QUESTION # 61

Which Database Actions tool is used to get information about the entities in your Oracle Autonomous Database and to also see how changing an object affects other objects?

- A. Data Load
- B. JSON
- **C. Catalog**
- D. Data Insight

**Answer: C**

Explanation:

Database Actions (formerly SQL Developer Web) offers tools for database management:

Correct Answer (A): The Catalog tool provides a detailed view of database entities (tables, views, schemas) and their metadata, including dependencies via the "Impact" tab. It helps assess how changes (e.g., dropping a table) affect related objects.

Incorrect Options:

B: Data Load is for importing data, not analyzing entities or dependencies.

C: JSON is a data format, not a tool; it's supported but irrelevant here.

D: Data Insight is a separate analytics service, not part of Database Actions.

Catalog is essential for metadata exploration and impact analysis.

### NEW QUESTION # 62

.....

As long as you study with our 1Z0-931-25 exam braindump, you can find that it is easy to study with the 1Z0-931-25 exam questions. Therefore, even ordinary examiners can master all the learning problems without difficulty. In addition, 1Z0-931-25 candidates can benefit themselves by using our test engine and get a lot of test questions like exercises and answers. They will help them modify the entire syllabus in a short time. The most important thing is that our 1Z0-931-25 Practice Guide can help you obtain the certification without difficulty.
