

1Z0-931-25 Real Test Practice Materials - 1Z0-931-25 Test Prep - PracticeDump

BONUS!!! Download part of PracticeDump 1Z0-931-25 dumps for free: <https://drive.google.com/open?id=10yxp6tcVwxDfUx2CM16jzLcUnPL6V4-6>

And you can also use the Oracle 1Z0-931-25 PDF on smart devices like smartphones, laptops, and tablets. The second one is the web-based Oracle 1Z0-931-25 practice exam which can be accessed through the browsers like Firefox, Safari, and Oracle Chrome. The customers don't need to download or install excessive plugins or software to get the full advantage from web-based 1Z0-931-25 Practice Tests.

Oracle 1Z0-931-25 Exam Syllabus Topics:

Topic	Details
Topic 1	Autonomous Database Shared: This section of the exam measures the skills of Cloud Engineers and focuses on creating and managing shared Autonomous Database instances. It includes provisioning, scaling, and starting or stopping instances, as well as database consolidation with Elastic Resource Pools. It also covers user management, cloning, database migration, monitoring, backup and restore processes, and introduces Data Guard for high availability, ensuring cloud engineers can maintain optimal database performance.
Topic 2	Managing and Maintaining Autonomous Database: This section of the exam measures the skills of Database Administrators and focuses on the ongoing management and maintenance of Autonomous Database instances. It includes using REST APIs and OCI CLI for automation, configuring access control lists and private endpoints, monitoring performance, setting up notifications, utilizing features like auto-indexing and data safe, handling connectivity through wallets and service handles, and configuring disaster recovery using Data Guard to ensure business continuity.
Topic 3	Data Lake Analytics with Autonomous Database: This section of the exam measures the skills of Big Data Engineers and explores how Autonomous Database can be used for analytics in data lake environments. It includes data ingestion, query optimization, and leveraging cloud-native analytics services, ensuring engineers can efficiently process and analyze large volumes of structured and unstructured data.
Topic 4	Autonomous Database Tools: This section of the exam measures the skills of Data Analysts and covers the tools available within Autonomous Databases for advanced data processing and analytics. It includes Oracle Machine Learning, APEX, and SQL Developer Web for database development, as well as data transformation, business model creation, data insights, and data analysis, allowing analysts to extract valuable insights from large datasets.

Topic 5	• Migrating to Autonomous Database: This section of the exam measures the skills of Cloud Migration Specialists and covers strategies for migrating existing databases to Autonomous Database. It includes understanding migration considerations, and available options, and using Oracle Data Pump to transfer data seamlessly while minimizing downtime, ensuring smooth transitions to Oracle Cloud infrastructure.

1Z0-931-25 Latest Exam Tips, 1Z0-931-25 Instant Download

If you face any hitch while using the Oracle 1Z0-931-25 practice exam software of PracticeDump, contact our customer support. Our team is available for the assistance of Oracle 1Z0-931-25 updated exam dumps users. Many candidates of the 1Z0-931-25 examination pay extra money because Oracle weaks the content of the test.

Oracle Autonomous Database Cloud 2025 Professional Sample Questions (Q88-Q93):

NEW QUESTION # 88

Which statement is true when connecting an OCI Marketplace image to a shared Autonomous Database?

- A. ADB must be configured with Private endpoints
- **B. Compute Image and Shared ADB must be in the same VCN and Subnet**
- C. Cannot connect OCI Marketplace image to shared ADB
- D. ADB must be configured with NSG

Answer: B

Explanation:

Connecting an OCI Marketplace image (e.g., a compute instance running a preconfigured application) to a shared Autonomous Database (ADB) involves network configuration. The correct statement is:

Compute Image and Shared ADB must be in the same VCN and Subnet (A): For a compute instance from the OCI Marketplace to communicate with a shared Autonomous Database, both must reside in the same Virtual Cloud Network (VCN) and subnet. This ensures direct network connectivity without requiring complex routing or public internet traversal. By default, shared ADB instances use private endpoints within a VCN, and placing the compute instance in the same subnet allows seamless access using the database's private IP address. For example, if the ADB is in subnet 10.0.1.0/24, the compute instance must also be in that subnet to connect via Oracle Net Services (e.g., using a wallet and tnsnames.ora).

The incorrect options are:

ADB must be configured with Private endpoints (B): While shared ADB instances are configured with private endpoints by default (not publicly accessible), this is not a configurable option you "must" set-it's inherent to shared infrastructure. Thus, it's not a requirement you actively enforce for this scenario; it's already true.

ADB must be configured with NSG (C): Network Security Groups (NSGs) are optional for controlling traffic to an ADB. You can use NSGs for finer-grained security, but they are not mandatory; Security Lists at the subnet level can suffice. Hence, this is not a universal requirement for connectivity.

Cannot connect OCI Marketplace image to shared ADB (D): This is false. OCI Marketplace images (e.g., a web server or analytics tool) can connect to a shared ADB, provided network and authentication prerequisites (like same VCN/subnet and client credentials) are met.

This requirement simplifies network setup and enhances security by keeping communication internal to the VCN. For instance, a Marketplace image like a web application could query an ADB in the same subnet using JDBC or ODBC, leveraging the private endpoint.

NEW QUESTION # 89

Which statement is true about the use of Access Control Lists (ACLs) with an Autonomous Database on Shared Infrastructure?

- A. ACLs can only be used with private endpoints
- **B. When you restore a database, the existing ACLs are not overwritten by the restore.**
- C. An ACL can only be set during the creation of an Autonomous Database on Shared Infrastructure
- D. An ACL can be set up for an IP Address or a virtual cloud network but not both at the same time

Answer: B

Explanation:

ACLs control network access to Autonomous Database on Shared Infrastructure:

Correct Answer (B): "When you restore a database, the existing ACLs are not overwritten by the restore" is true. ACLs are part of the database's network configuration, preserved during restore operations to maintain security settings.

Incorrect Options:

A: ACLs can include both IP addresses and VCN CIDR blocks simultaneously; they're not mutually exclusive.

C: ACLs apply to public endpoints, not just private ones, to restrict access.

D: ACLs can be modified post-creation, not just at provisioning time.

This ensures consistent security post-restore.

NEW QUESTION # 90

Which three operations are available for a quarterly maintenance update on Autonomous Container Database? (Choose three.)

- A. Apply a partial patch
- **B. Skip patching**
- C. Patch immediately
- **D. Reschedule patching**
- **E. Reschedule and patch immediately**

Answer: B,D,E

Explanation:

Oracle Autonomous Container Database (ACD) provides specific options for managing quarterly maintenance updates to ensure minimal disruption and flexibility. The three correct operations available are:

Reschedule and patch immediately (B): This option allows users to adjust the maintenance window to a more convenient time and apply the patch right away within that rescheduled window. It's useful when the default schedule conflicts with business operations but immediate patching is still desired.

Reschedule patching (C): This option enables users to defer the patching to a later maintenance window that suits their operational needs, providing flexibility without applying the patch immediately.

Skip patching (D): Users can choose to skip a quarterly maintenance update entirely, which is beneficial if the current database version is stable and no immediate updates are required. Oracle allows skipping up to two consecutive quarterly updates for Autonomous Container Databases on dedicated infrastructure.

The incorrect options are:

Patch immediately (A): This is not a standalone option for quarterly updates on ACDs. Patching occurs within scheduled maintenance windows, and immediate patching outside of rescheduling is not supported as a distinct choice.

Apply a partial patch (E): Oracle does not support applying partial patches during quarterly maintenance updates. Updates are delivered as complete bundles to ensure consistency and security.

This aligns with Oracle's maintenance policies for Autonomous Databases on dedicated infrastructure, where control over scheduling and skipping is provided, but partial patching is not an option.

NEW QUESTION # 91

Which are two available options when creating an Autonomous Database? (Choose two.)

- A. APEX Service on Shared Infrastructure
- B. Autonomous JSON Database on Dedicated Infrastructure
- **C. APEX Service on Dedicated Infrastructure**
- **D. Autonomous JSON Database on Shared Infrastructure**

Answer: C,D

Explanation:

Creating an Autonomous Database offers specific deployment options. The two correct ones are:

APEX Service on Dedicated Infrastructure (A): This option provisions an Autonomous Database on dedicated Exadata infrastructure with Oracle Application Express (APEX) pre-installed and optimized. It's ideal for APEX-based apps (e.g., custom web forms) requiring isolated resources. In the OCI console, you select "Dedicated Infrastructure" and "APEX Service" as the workload type, specifying OCPUs and storage. For example, a company might deploy an APEX app for internal reporting on a dedicated ACD, ensuring performance isolation from other tenants.

Autonomous JSON Database on Shared Infrastructure (C): This creates a schema-less, JSON-centric ADB on shared infrastructure, optimized for document storage (e.g., { "order_id": 123, "items": [...] }). It's provisioned via the OCI console under "Shared Infrastructure," selecting "JSON Database" as the workload type. For instance, a mobile app might use it to store user data, leveraging SQL/JSON queries like SELECT JSON_VALUE(doc, '\$.order_id'). It's cost-effective and fully managed, sharing Exadata resources.

The incorrect options are:

APEX Service on Shared Infrastructure (B): There's no distinct "APEX Service" workload type on shared infrastructure. APEX is available within ATP or ADW on shared infra, but it's not a standalone option-you'd provision ATP and enable APEX manually, not as a dedicated "APEX Service." Autonomous JSON Database on Dedicated Infrastructure (D): JSON Database is only offered on shared infrastructure, not dedicated. Dedicated options include ATP, ADW, and APEX Service, but JSON Database leverages shared resources for simplicity and cost.

These options cater to specific app development (APEX) and NoSQL (JSON) needs.

NEW QUESTION # 92

Which of the following two statements regarding Data Transforms are correct? (Choose two.)

- A. Workflows for Data Transforms are only available on the ODI Web Edition
- **B. All capabilities to transform data in ODI Classic are available with ODI Web Edition**
- C. Data Transforms provides access to Oracle Data Integrator (ODI) Web Edition
- **D. Data Transforms allows you to design data transformations in the form of data loads, data flows, and workflows**

Answer: B,D

Explanation:

Data Transforms is a feature in Autonomous Database for designing data transformations. The two correct statements are: Data Transforms allows you to design data transformations in the form of data loads, data flows, and workflows (B): True. Data Transforms provides a graphical interface to create data loads (importing data), data flows (transforming data), and workflows (sequencing operations), simplifying ETL processes within ADB.

All capabilities to transform data in ODI Classic are available with ODI Web Edition (D): True. Oracle Data Integrator (ODI) Web Edition, which integrates with Data Transforms, retains the full transformation capabilities of ODI Classic, adapted for a web-based interface.

The incorrect statements are:

Data Transforms provides access to Oracle Data Integrator (ODI) Web Edition (A): False. Data Transforms is a distinct tool within ADB; while it leverages ODI under the hood, it does not directly provide access to ODI Web Edition as a standalone product.

Workflows for Data Transforms are only available on the ODI Web Edition (C): False. Workflows are part of Data Transforms itself, not exclusive to ODI Web Edition.

These features enhance data integration in ADB.

NEW QUESTION # 93

.....

As the authoritative provider of 1Z0-931-25 learning materials, we can guarantee a high pass rate compared with peers, which is also proved by practice. Our good reputation is your motivation to choose our learning materials. We guarantee that if you under the guidance of our 1Z0-931-25 learning materials step by step you will pass the exam without a doubt and get a certificate. Our learning materials are carefully compiled over many years of practical effort and are adaptable to the needs of the exam. We firmly believe that you cannot be an exception. Choosing our 1Z0-931-25 Study Material actually means that you will have more opportunities to be promoted in the near future.
