## Oracle Database 19c: Data Guard Administration Sample Questions (Q93-Q98):

### NEW QUESTION # 93

Which two are true concerning the configuring of Flashback database in a Data Guard environment?

- A. It is required in order for a snapshot standby database to be converted to a physical standby database.
- **B. It permits a physical standby database to be converted to a snapshot standby database.**
- C. It enables the use of far sync instances.
- D. It is a prerequisite for the use of Fast Start Failover.
- **E. It permits a primary database that was disabled after failover to be reinstated as a standby.**

**Answer: B,E**

### NEW QUESTION # 94

Which TWO are benefits of using Transaction Guard in a Data Guard environment?

- A. It provides application continuity by replaying transactions interrupted by a failover or a switchover
- B. It protects against user errors being replicated to standby databases.
- **C. It provides application continuity by rolling back uncommitted transactions interrupted by a failover or switchover.**
- D. It protects against logical corruptions being replicated to standby databases.
- **E. It protects against recoverable errors during a planned or an unplanned outage of a primary database.**

**Answer: C,E**

Explanation:

Transaction Guard provides benefits in terms of transaction consistency and recovery in a Data Guard environment:

\* It provides application continuity by rolling back uncommitted transactions interrupted by a failover or switchover (B): Transaction Guard ensures that any uncommitted transactions at the time of an outage are rolled back consistently, thus preserving the integrity of the application's data and state.

\* It protects against recoverable errors during a planned or an unplanned outage of a primary database (D): Transaction Guard offers protection against errors that can occur during outages, allowing applications to resume operations more quickly and reliably after recovery.

### NEW QUESTION # 95

Which THREE statements are true..... open in real time query mode, which becomes a new.

- A. Sessions that have long running queries can be retained.
- B. Sessions that are using database links
- **C. All sessions are disconnected and all**
- **D. All current buffers can be retained.**
- **E. User sessions can be retained.**
- F. User sessions and Current Buffers are maintained by default.

**Answer: C,D,E**

Explanation:

When a physical standby database is opened in real-time query mode, which may be referred to as real-time apply when using Active Data Guard, certain operations can disrupt ongoing sessions. However, with features like Application Continuity and the proper configuration of initialization parameters such as STANDBY\_DB\_PRESERVE\_STATES, user sessions and current buffers may be preserved during role transitions such as a switchover or failover. Specifically, the STANDBY\_DB\_PRESERVE\_STATES parameter can be set to preserve none, all, or only user sessions during such transitions. This ensures that in-flight transactions are not lost and that users do not experience disruptions during the role transitions of a physical standby database.
