

1z1-076 Examengine, 1z1-076 PDF Testsoftware

2025 Die neuesten ITZert 1z1-076 PDF-Versionen Prüfungsfragen und 1z1-076 Fragen und Antworten sind kostenlos verfügbar:
<https://drive.google.com/open?id=1EawlOppzrV2oYTK7hnySlomZdDi9HxBQ>

Sie haben schon die Prüfungsmaterialien zur Oracle 1z1-076 Zertifizierung von ITZert gesehen. Es ist doch Zeit, eine Wahl zu treffen. Sie können auch andere Produkte wählen, aber unser ITZert wird Ihnen die größten Interessen bringen. Mit ITZert werden Sie eine glänzende Zukunft haben, eine bessere Berufsaussichten in der IT-Branche haben und effizient arbeiten.

Oracle 1z1-076 Prüfungsplan:

Thema	Einzelheiten
Thema 2	Monitoring a Data Guard Broker Configuration: The topic covers the use of Enterprise Manager and DGMGRL to monitor Data Guard configurations and explains the various data protection modes available.
Thema 3	Using Oracle Active Data Guard: Supported Workloads in Read-Only Standby Databases: Here, the usage of physical standby databases for real-time queries is discussed.
Thema 4	Backup and Recovery Considerations in an Oracle Data Guard Configuration: In this topic, Backup and recovery procedures in a Data Guard configuration are discussed, including RMAN backups, offloading to physical standby, and network-based recovery.
Thema 5	Using Flashback Database in a Data Guard Configuration: This topic covers the configuration and advantages of using Flashback Database in a Data Guard setup, as well as the process of enabling fast-start failover for seamless role changes.
Thema 6	Oracle Data Guard Basics: This topic covers the essential architecture and concepts of Oracle Data Guard. It includes sub-topics such as the physical and logical standby database comparison, benefits of Data Guard, and its integration with multi-tenant databases.
Thema 7	Creating a Data Guard Broker Configuration: This section delves into the practical aspects of creating and managing a Data Guard broker configuration, including command-line and Enterprise Manager approaches.
Thema 8	Managing Physical Standby Files After Structural Changes on the Primary Database: The topic covers managing structural changes in the primary database and their impact on physical standby files.
Thema 10	Oracle Data Guard Broker Basics: An overview of the Data Guard broker, its architecture, components, benefits, and configurations, is provided here. It serves as an introduction to the tool used for managing Data Guard configurations.

Thema 11	Managing Oracle Net Services in a Data Guard Environment: The section focuses on Oracle Net Services and its role in Data Guard networking setup.
Thema 12	Performing Role Transitions: Here, the concept of database roles is explained, along with the steps for performing switchovers, failovers, and maintaining physical standby sessions during role transitions.

1z1-076 PDF Testsoftware - 1z1-076 Antworten

Wollen Sie gute Leistung in IT-Industrie haben und mehr professioneller anerkannt werden? Melden Sie sich bitte Oracle 1z1-076 IT-Industrie an, um Ihre Fähigkeit zu entwickeln. Wir ITZert helfen Ihnen, den Wunsch zu erfüllen. Hier sind sehr professionelle Kenntnisse und starke Dumps über Oracle 1z1-076 Zertifizierungsprüfung, guten Service, die Ihr besseres Beherrschen der Kenntnisse realisieren und die Oracle 1z1-076 Prüfung leichter bestehen und leichter Ihren Erfolg zu erreichen.

Oracle Database 19c: Data Guard Administration 1z1-076 Prüfungsfragen mit Lösungen (Q48-Q53):

48. Frage

Which THREE statements are true about Far Sync instances?

- A. They work with any protection level.
- B. They use an spfMe, a standby controlfile, and standby redo logs.
- C. A primary database can ship redo directly to multiple Far Sync instances.
- D. The Data Guard Broker must be used to deploy and manage Far Sync instances.
- E. They enable standby databases to be configured at remote distances from the primary without impacting performance on the primary.

Antwort: C,D,E

Begründung:

Far Sync instances are a feature of Oracle Data Guard designed to support zero data loss protection over long distances:

The Data Guard Broker must be used to deploy and manage Far Sync instances (A): Data Guard Broker simplifies the deployment and management of Far Sync instances, which are an integral part of zero data loss protection configurations.

They enable standby databases to be configured at remote distances from the primary without impacting performance on the primary (C): Far Sync instances are designed to receive redo from the primary database and then forward it to a remote standby database, thereby avoiding any performance impact on the primary database itself.

A primary database can ship redo directly to multiple Far Sync instances (E): A primary database can be configured to send redo logs to more than one Far Sync instance, which can then forward the redo to their respective remote standby databases.

49. Frage

Suppose that you manage the following databases in your environment:

* boston: Primary database with a single PDB called DEVI

* london: Physical standby database protecting the PDB called DEVI

* orcl: Stand-alone database with a single PDB called PDB1 as a remote clone source You are planning to run the following command to create a remote clone in the primary database (boston) using pdbi in orcl:

Which are the THREE prerequisites for automating instantiation of the PDB in the standby database (london)?

- A. Set standby_pdb_source_file_dblink to clone_link in the london database.
- B. Set STANDBY_FILE_MANAGEMENT to auto in the london database.
- C. Set STANDBY_PDB_SOURCE_FILE_DIRECTORY to <location of the PDB> in the london database.
- D. Open PDBI (remote clone source) in Read Only.
- E. Enable Active Data Guard in the _ondon database.

- F. Open PDBI (remote clone source) in Read Write.

Antwort: B,C,D

Begründung:

To automate the instantiation of a PDB in the standby database after creating a remote clone in the primary database, certain conditions must be met:

- * Open PDBI (remote clone source) in Read Only (A): The source PDB from which the clone is created must be open in read-only mode to ensure a consistent state during cloning.
- * Set STANDBY_PDB_SOURCE_FILE_DIRECTORY to <location of the PDB> in the london database (C): This parameter specifies the location on the standby database where the files from the source PDB should be placed.
- * Set STANDBY_FILE_MANAGEMENT to auto in the london database (F): This parameter automates the management of file changes on the standby database when structural changes occur on the primary database, ensuring that the clone operation is reflected automatically on the standby.

50. Frage

Which four factors can influence the rate of SQL apply on a logical standby database?

- A. the number of full table scans performed by SQL apply
- B. the size of the undo tablespace on the logical standby database
- C. the number of applier processes
- D. the size of the shared pool
- E. the number of coordinator processes on the standby database instance
- F. the number of PREPARE processes

Antwort: A,C,E,F

Begründung:

The rate of SQL apply on a logical standby database can be influenced by:

A: The number of PREPARER processes (which seems to be a typographical error and should read as PREPARER or similar) which prepare the redo data for the applier processes.

B: The number of coordinator processes on the standby database instance which coordinate the SQL apply activities.

C: The number of full table scans performed by SQL apply since full table scans can be resource-intensive and slow down the apply rate.

E: The number of applier processes which apply the redo data to the logical standby database.

Option D is incorrect as the size of the undo tablespace on the logical standby database is more likely to affect the SQL apply lag rather than the rate of SQL apply.

Option F is incorrect because the size of the shared pool would typically not influence the rate of SQL apply. The shared pool is more related to the caching of shared SQL and PL/SQL code and control structures.

51. Frage

Which two are true about managing and monitoring Oracle container databases in a Data Guard environment using the broker?

- A. All broker actions execute at the root container for container databases.
- B. After a role change, the broker opens all Pluggable databases (pdbb) on the new primary.
- C. If the primary database is a container database, then a logical standby may be a non-container database.
- D. If the primary database is a container database, then a physical standby may be a non-container database.
- E. If the primary database is not a container database, then a standby may be a container database.

Antwort: A,B

Begründung:

In the context of Oracle Data Guard and container databases (CDBs) managed by Data Guard Broker:

- * All broker actions execute at the root container for container databases (D): When using Data Guard Broker to manage a CDB, the actions performed by the broker are executed at the level of the root container. This is because the root container maintains the control and configuration information that applies to the entire CDB, including all of its pluggable databases (PDBs).

* After a role change, the broker opens all Pluggable databases (PDBs) on the new primary (E):

Following a role transition such as a switchover or a failover, Data Guard Broker ensures that all PDBs within the CDB of the new primary database are opened, which is essential to resume operations of the PDBs without manual intervention. References:

* Oracle Data Guard Broker documentation

* Oracle Multitenant Administrator's Guide

52. Frage

A Data Guard environment has this configuration and these attributes:

A primary database

A physical standby database named sbdb

The configuration is in maximum availability protection mode.

Then sbdb is converted to a snapshot standby database.

Which two statements are true?

- A. The recovery point objective increases.
- B. sbdb can still apply redo.
- C. The recovery time objective increases.
- D. The protection mode is lowered to maximum performance.
- E. sbdb can still receive redo.

Antwort: A,E

53. Frage

.....

Die Testaufgaben von Oracle 1z1-076 Zertifizierungsprüfung aus ITZert sind durch die Praxis getestet, daher sind sie zur Zeit das gründlichste, das genaueste und das neueste Produkt auf dem Markt. Unser ITZert bietet Ihnen präzise Lehrbücher und Erfahrungen, die auf umfangreichem Erfahrungen und der realen Welt basieren, was Ihnen verspricht, dass Sie in kürzester Zeit die Zertifizierungsprüfung von Oracle 1z1-076 bestehen können. Nach dem Kauf unserer Produkte werden Sie einjährige Aktualisierung genießen.
