Just like the old saying goes: "Practice is the only standard to testify truth", which means learning of theory ultimately serves practical application, in the same way, it is a matter of common sense that pass rate of a kind of 1Z1-182 exam torrent is the only standard to testify weather it is effective and useful. I believe that you already have a general idea about the advantages of our Oracle Database 23ai Administration Associate exam question, but now I would like to show you the greatest strength of our 1Z1-182 Guide Torrent --the highest pass rate. According to the statistics, the pass rate among our customers who prepared the exam under the guidance of our 1Z1-182 guide torrent has reached as high as 98% to 100% with only practicing our 1Z1-182 exam torrent for 20 to 30 hours.

The one badge of 1Z1-182 certificate will increase your earnings and push you forward to achieve your career objectives. Are you ready to accept this challenge? Looking for the simple and easiest way to pass the 1Z1-182 certification exam? If your answer is yes then you do not need to get worried. Just visit the Oracle 1Z1-182 PdfDumps and explore the top features of 1Z1-182 test questions. If you feel that Oracle Database 23ai Administration Associate 1Z1-182 exam questions can be helpful in exam preparation then download Oracle Database 23ai Administration Associate 1Z1-182 updated questions and start preparation right now.

>> 1Z1-182 Passing Score <<

The Best 1Z1-182 Passing Score & Leading Provider in Qualification Exams & Complete 1Z1-182 Training Questions

It would be really helpful to purchase Oracle Database 23ai Administration Associate exam dumps right away. If you buy this Oracle Certification Exams product right now, we'll provide you with up to 1 year of free updates for 1Z1-182 authentic questions. You can prepare using these no-cost updates in accordance with the most recent test content changes provided by the 1Z1-182

Exam Dumps. The 1Z1-182 actual questions we sell also come with a free demo.

Oracle 1Z1-182 Exam Syllabus Topics:

Topic	Details
Topic 1	Managing Tablespaces and Datafiles: This section assesses the abilities of Storage Administrators in creating, modifying, and describing tablespaces. It also covers recognizing data storage requirements and understanding datafile placement for efficient storage management.
Topic 2	Introduction to Auditing: This domain tests the abilities of Compliance Specialists in implementing database auditing practices. It includes creating, modifying, and maintaining auditing policies while applying value-based auditing techniques like Fine-Grained Auditing (FGA).
Topic 3	Employ Oracle-Supplied Database Tools: This section evaluates the abilities of Database Engineers and Support Specialists in identifying and using Oracle-supplied tools for managing databases. It focuses on leveraging tools to monitor, troubleshoot, and optimize database performance effectively.
Topic 4	Managing Storage: This section tests the knowledge of Storage Engineers in managing storage features such as resumable space allocation, segment space-saving, and block space management. It also includes defining segment characteristics to optimize storage utilization.
Topic 5	Describe Managing Database Instances: This section tests the knowledge of Database Administrators in performing essential tasks for managing database instances. It includes starting and shutting down databases, utilizing dynamic performance views, managing initialization parameter files, and using the Automatic Diagnostic Repository (ADR) for troubleshooting.
Topic 6	Automated Maintenance: This section measures the skills of Database Administrators in describing automated maintenance tasks within Oracle databases. It focuses on applying automated features to streamline routine maintenance activities.
Topic 7	Introduction to Performance: This section evaluates the expertise of Performance Analysts in summarizing Oracle database performance management techniques. It includes measuring database performance using SQL execution plans, directives, and advisors to ensure optimal system efficiency.
Topic 8	Moving Data: This section evaluates the expertise of Data Migration Specialists in moving data within Oracle databases. It includes using external tables, executing Oracle Data Pump operations, and distinguishing SQL*Loader commands for importing data efficiently.
Topic 9	Configuring Oracle Net Services: This section measures the skills of Network Administrators and Database Administrators in configuring Oracle Net Services. It includes identifying administration components, describing connection methods, and ensuring seamless communication between clients and databases.

Oracle Database 23ai Administration Associate Sample Questions (Q92-Q97):

NEW QUESTION # 92

Which three Oracle database space management features will work with both Dictionary and Locally managed tablespaces?

- A. Oracle Managed Files (OMF).
- B. Online index segment shrink.
- C. Online table segment shrink.
- D. Automatic data file extension (AUTOEXTEND).
- E. Capacity planning growth reports based on historical data in the Automatic Workload Repository (AWR).

Answer: A,D,E

Explanation:

Dictionary-managed tablespaces (DMTs) use the data dictionary for extent management, while locally managed tablespaces (LMTs) use bitmaps. Let's evaluate compatibility:

A . Capacity planning growth reports based on historical data in the Automatic Workload Repository (AWR).

True. AWR tracks space usage (e.g., DBA_HIST_TBSPC_SPACE_USAGE) regardless of tablespace type, enabling growth reports for both DMTs and LMTs.

Mechanics:MMON collects metrics like segment growth, stored in SYSAUX, accessible via EM or scripts.

Practical Use:Helps predict when to add data files, universal across management types.

B . Online table segment shrink.

False. ALTER TABLE ... SHRINK SPACE requires LMTs with Automatic Segment Space Management (ASSM), unavailable in DMTs, which lack bitmap-based free space tracking.

Why Incorrect:DMTs use freelists, incompatible with shrink operations.

C . Online index segment shrink.

False. Like tables, ALTER INDEX ... SHRINK SPACE requires LMTs with ASSM, not supported in DMTs.

Why Incorrect:Same limitation as B; DMTs can't compact online.

D . Oracle Managed Files (OMF).

True. OMF automates file naming and placement (via DB_CREATE_FILE_DEST) for both DMTs and LMTs, agnostic to extent management.

Mechanics:Example: CREATE TABLESPACE ts1; creates an OMF file in either type.

Edge Case:DMTs are rare in 23ai, but OMF still applies.

E . Automatic data file extension (AUTOEXTEND).

True. AUTOEXTEND ON allows data files to grow as needed, supported in both DMTs and LMTs since early versions.

Mechanics:ALTER DATABASE DATAFILE ... AUTOEXTEND ON NEXT 100M; works universally.

NEW QUESTION # 93

What are Optimizer Statistics?

- A. Optimizer Statistics are statistics about data distribution within Oracle Datafiles.
- B. Optimizer Statistics are a set of data distribution statistics collected in real time as data is inserted, deleted, or updated, which are stored in AWR and used for generating SQL execution plans.
- C. Optimizer Statistics are part of system performance statistics stored in AWR required for calculating SQL execution plans.
- **D. Optimizer Statistics are table, column, index, and system statistics used for generating efficient SQL execution plans.**

Answer: D

Explanation:

A .False. Not real-time; collected periodically.

B .False. Not about datafile distribution.

C .True. Includes table, column, index stats for plan generation.

D .False. Stored in data dictionary, not AWR.

NEW QUESTION # 94

Which two AWR-based tools listed below are part of Oracle Database self-tuning components?

- **A. Automatic capture of statistical information from the SGA and storing it in the AWR using Automatic Database Diagnostic.**
- B. Automatic Diagnostic Collector used to capture and store database errors and hung analysis.
- C. Automatic Application Tracing used to collect High-Load SQL statements and statistics.
- D. Automatic population of performance views (V\$ views) from statistical data stored in AWR repository and using Automatic Database Diagnostic.
- **E. ADDM, a server-based expert that reviews database performance statistics captured by Snapshots to identify potential problems before system performance degrades noticeably.**
- F. Automatic Application Tracing used to collect High-Load SQL statements and statistics.

Answer: A,E

Explanation:

False. No "Automatic Application Tracing" exists as an AWR tool. SQL tracing (e.g., DBMS_MONITOR) is manual, and high-load SQL is captured by AWR indirectly via V\$SQL snapshots, not a distinct tracing tool.

Why Incorrect:Conflates manual tracing with AWR's passive collection.

Explanation:

The Automatic Workload Repository (AWR) is a cornerstone of Oracle's self-tuning capabilities, collecting and storing performance statistics for analysis. Let's dissect each option:

A : Automatic capture of statistical information from the SGA and storing it in the AWR using Automatic Database Diagnostic.

True. AWR automatically captures statistics (e.g., wait events, SQL stats) from the System Global Area (SGA) via the MMON (Manageability Monitor) process, storing them in the AWR repository (in SYSAUX). This is part of the Automatic Database Diagnostic Monitor (ADDM) framework, though "Automatic Database Diagnostic" likely refers to this broader mechanism.

Mechanics: Snapshots are taken hourly by default (configurable via

DBMS_WORKLOAD_REPOSITORY.MODIFY_SNAPSHOT_SETTINGS), persisting data like DBA_HIST_SYSSTAT for self-tuning analysis.

Practical Use: Enables historical performance tracking, feeding tools like ADDM and SQL Tuning Advisor.

Edge Case: If STATISTICS_LEVEL=BASIC, AWR collection is disabled, halting self-tuning.

Historical Note: Introduced in 10g, enhanced in 23ai for finer granularity.

B : ADDM, a server-based expert that reviews database performance statistics captured by Snapshots to identify potential problems before system performance degrades noticeably.

True. The Automatic Database Diagnostic Monitor (ADDM) analyzes AWR snapshots to proactively detect issues (e.g., high CPU usage, I/O bottlenecks) and recommend fixes. It runs automatically after each snapshot in maintenance windows.

Mechanics: ADDM uses DBA_ADVISOR_FINDINGS to log issues, leveraging AWR data like DBA_HIST_SQLSTAT.

Example: It might suggest adding an index for a slow query.

Practical Use: Prevents performance degradation in production systems by catching trends early.

Edge Case: Limited by snapshot frequency; real-time issues may need manual intervention.

C : Automatic Diagnostic Collector used to capture and store database errors and hung analysis.

False. No such tool exists as an "Automatic Diagnostic Collector" in AWR context. This likely confuses the Incident Packaging Service (IPS) or ADR (Automatic Diagnostic Repository), which handles errors but isn't AWR-based or self-tuning.

Why Incorrect: ADR collects trace files and logs, not AWR statistics, and isn't part of self-tuning.

D : Automatic population of performance views (V\$ views) from statistical data stored in AWR repository and using Automatic Database Diagnostic.

False. V\$ views (e.g., V\$SESSION) are real-time memory structures in the SGA, not populated from AWR, which is historical (e.g., DBA_HIST_*). AWR doesn't back-feed V\$ views; the reverse occurs via snapshots.

Why Incorrect: Misunderstands the data flow; AWR is a sink, not a source for V\$ views.

NEW QUESTION # 95

Which two statements are true about the tools used to configure Oracle Net Services?

- A. Oracle Net Manager can be used to centrally configure listeners on any database server target.
- B. Enterprise Manager Cloud Control can be used to centrally configure net service names for any database server target.
- C. The Oracle Net Configuration Assistant is only used when running the Oracle installer.
- D. The lsnrctl utility requires a listener.ora file to exist before it is started.
- E. Oracle Net Manager can be used to locally configure naming methods on a database server.

Answer: B,E

Explanation:

A .False. lsnrctl can start a default listener without listener.ora.

B .True. EMCC provides centralized Net Services configuration.

C .False. NetCA can run standalone, not just during installation.

D .True. Net Manager configures local naming (e.g., TNSNAMES.ORA).

E .False. Net Manager is local, not centralized like EMCC.

NEW QUESTION # 96

Which two tasks can you perform using DBCA for databases?

- A. Configure incremental backups for a new database.
- B. Enable flashback database for an existing database.
- C. Change the standard block size of an existing database.
- D. Register a new database with an available Enterprise Manager Management server.
- E. Configure a nonstandard block size for a new database.

Answer: D,E

A. False. Ba

- E .False. Flashback is enabled via SQL, not DBCA for existing DBs.
