The FreeCram is committed to making the entire Oracle 1Z1-591 exam preparation process instant and successful. To achieve these objectives the FreeCram is offering real, valid, and updated Oracle Business Intelligence Foundation Suite 11g Essentials (1Z1-591) exam practice test questions in three high in demand formats. These formats are Oracle 1Z1-591 PDF dumps files, desktop practice test software, and web-based practice test software.

Obtaining the Oracle Business Intelligence Foundation Suite 11g Essentials certification can enhance career opportunities for professionals in the business intelligence field. With a thorough understanding of Oracle Business Intelligence, individuals are equipped to provide organizations with valuable insights and strategies that can help improve business operations and decision-making. A successful completion of 1Z1-591 exam can go a long way in demonstrating one's skills and commitment to the industry.

Oracle 1Z1-591 Certification Exam is a multiple-choice exam that consists of 70 questions. Candidates have 120 minutes to complete the exam and must score at least 70% to pass. 1Z1-591 exam is available in English and Japanese and can be taken at authorized testing centers or online through the Oracle University website.

Oracle 1Z1-591 Exam Simulator | 1Z1-591 Actual Exams

After you purchase our 1Z1-591 exam guide is you can download the test bank you have bought immediately. You only need 20-30

hours to learn and prepare for the 1Z1-591 exam, because it is enough for you to grasp all content of our 1Z1-591 study materials, and the passing rate of our 1Z1-591 Exam Questions is very high and about 98%-100%. Our latest 1Z1-591 quiz torrent provides 3 versions and you can choose the most suitable one for you to learn. All in all, there are many merits of our 1Z1-591 quiz prep.

Oracle 1Z1-591 exam is a certification exam that validates the knowledge and skills of professionals in the field of business intelligence. 1Z1-591 exam covers all the components of the Oracle Business Intelligence Foundation Suite and tests the candidate's ability to use them efficiently. 1Z1-591 Exam is suitable for business analysts, data analysts, data scientists, and developers who have experience in working with the Oracle BI Foundation Suite. Successful candidates become Oracle Certified Associates in the Oracle Business Intelligence Foundation Suite 11g Essentials.

Oracle Business Intelligence Foundation Suite 11g Essentials Sample Questions (Q57-Q62):

NEW QUESTION # 57
What is an example of a Session Variable?

- A. ETL Load Date
- B. Top Customers by Revenue
- C. OLAP DSN
- D. User Organization

Answer: D

Explanation:
Explanation/Reference:
Note 1: There are four types of variables that you can use:
Session
Repository
Presentation
Request
Note 2: Session Variables
A session variable is a variable that is initialized at login time for each user. When a user begins a session, the Oracle BI Server creates a new instance of a session variable and initializes it.
There are as many instances of a session variable as there are active sessions on the Oracle BI Server. Each instance of a session variable could be initialized to a different value.
There are two types of session variables:
System - A session variable that the Oracle BI Server and Oracle BI Presentation Services use for specific purposes.
System session variables have reserved names that cannot be used for other kinds of variables (such as static or dynamic repository variables and non-system session variables).
Non-system - A system variable that the administrator creates and names. For example, the administrator might create a SalesRegion non-system variable that initializes the name of a user's sales region.
The administrator creates non-system session variables using the Oracle BI Administration Tool.
Incorrect answers:
A: ETL Load Date is a DAC Source System Parameter.
C: OLAP DSN is a Repository variable.

NEW QUESTION # 58
Which option describes how OBIEE Integrates with Planning?

- A. OBIEE provides complete access to all Planning data through the Analytic Data Model (ADM) layer.
- B. Planning is not a supported OBIEE source.
- C. OBIEE integrates with Planning directly through relational database access.
- D. OBIEE primarily accesses Planning using standard Essbase integration techniques.

Answer: A,D

Explanation:
Explanation/Reference:
A:
* Combining Relational and OLAP Data Sources: Oracle's Common Enterprise Information Model allows users to combine data

from a relational system and an OLAP source in a single calculation. For example, a user can compare sales forecasts from an Oracle CRM System with budget data from an Oracle Essbase planning application. To clients of the Common Enterprise Information Model, the forecast and budget data appear to be from the same logical source.

* The Essbase server provides advanced multi-user read and write capabilities, including data update and multi-user recalculation. Business users with front-end tools can write data back to a server and recalculate the data on a server using calculation scripts-key functionality to support sophisticated modeling and planning applications.

* Using aggregate storage, Essbase serves a wide range of analytic needs-financial analysis, planning, budgeting, sales analysis, marketing analysis, supply-chain analysis, and profitability analytics-all from a single analytic infrastructure.

B:

Note: The Analytic Data Model (ADM) is an API used to access OLAP data and metadata. ADM is similar to JDBC, providing a single common API that hides most differences between OLAP data sources.

Note 2: Data model for business intelligence

The most important component of business intelligence is the concept of 'data model'. data model determinde what kind of analysis that end user could do with the data. It is also an independant concept that could span across different vendor 's product.

Unlike data model of the transaction system, the typical analytic data model is often denormalized and store extra data for analytic query and better query performance while transaction data model use is often normalized and optimized for a few data read and write, which is implemented by jointing many tables.

The most common used analytic data model in business intelligence is call the 'Star schema' data model.

With the Oracle business intelligence system, We could define star schema and dimension data model in the 'logical layer' in the admin tools. The data model in OBIEE could span different data source in physical layer, which means OBIEE have the capability of building one logical data model which is actually connect to different database in the backend

NEW QUESTION # 59

Which two Oracle BI Components contain security information regarding permissions and privileges?

- A. The Repository
- B. NQServer.ini File
- C. NQSConfig.ini File
- D. InstanceConfig.xml File
- E. The Web Catalog

Answer: A,C

Explanation:

Explanation/Reference:

B: Oracle Business Intelligence uses a role-based access control model. Security is defined in terms of Application Roles that are mapped to directory server groups and users.

To define a complete security model, you have then to define:

1. A security structure by creating this elements:

* The directory Server User and Group managed by the authentication provider.

* The application roles managed by the policy store provider

2. a security policy (permissions) split across the following components:

*Presentation Catalog

* Repository

* Policy Store to define the Application Policies managed by the policy store provider D: NQSConfig.ini is the main configuration file of Bi Server and contains a lot of parameters.

The file is located in this directory :

11g: ORACLE_INSTANCE/config/OracleBIServerComponent/coreapplication_obisn All changes made to this file require that you restart the Oracle BI Server Service.

Type of Parameters in NQSConfig.ini:

* Security Section Parameters

The security parameters specify default values for the Oracle BI Server security features.

Includes among others:

/DEFAULT_PRIVILEGES

* Repository Section Parameters

* Query Result Cache Section Parameters

* General Section Parameters

The General section contains general server default parameters, including localization and internationalization, temporary space and memory allocation, and other default parameters used to determine how data is returned from the Oracle BI Server to a client.

Incorrect answers:

C: No file NQServer.ini File.
E: On 10g, Instanceconfig.xml is THE parameter file of the BI Presentation server. With the advent of 11g, instanceconfig.xml is also the configuration file of Oracle BI Scheduler The instanceconfig.xml file stores the configuration settings that affect Oracle BI Presentation Services.
Reference: Oracle Fusion Middleware System Administrator's Guide for Oracle Business, A NQSConfig.INI File Configuration Settings

NEW QUESTION # 60
Object Security controls access to Subject Areas, Tables, and Columns in OBIEE and can be implemented by using which method?

- A. Single Sign-On (SSO)
- B. Business Logic Object Security
- C. Database Authentication
- D. LDAP Authentication
- E. External Table Authentication

Answer: B

Explanation:
Explanation
Object-level security controls the visibility to business logical objects based on a user's role. You can set up object-level security for metadata repository objects, such as subject areas and presentation folders, and for Web objects, such as dashboards and dashboard pages, which are defined in the Presentation Catalog.
1) Business logic object
This controls access to objects, such as:
* subject areas
* presentation tables
* presentation columns
For example, users in a particular department can view only the subject areas that belong to their department.
2) Web object security
This provides security for objects stored in the Web Catalog, such as dashboards, dashboard pages, folders, and reports. You can view only the objects for which you are authorized. For example, a mid-level manager may not be granted access to a dashboard containing summary information for an entire department.

NEW QUESTION # 61
An integrated BI tools business case can be built around which three options?

- A. Fault tolerance
- B. Development efficiency
- C. Scalability
- D. Cost Savings

Answer: B,C,D
