Which security technology allows only a set of pre-approved applications to run on a system?

- A. application-level whitelisting
- B. antivirus
- C. host-based IPS
- D. application-level blacklisting

Answer: A

Explanation:

Application-level whitelisting is a security technology that allows only a set of pre-approved applications to run on a system, and blocks any other unauthorized or malicious programs. This can prevent malware, ransomware, zero-day exploits, and other threats from compromising the system. Application-level whitelisting is also known as application control or application allowlisting.
