Exam Cisco 200-901 Forum - 200-901 Guide Torrent

Our DevNet Associate Exam test torrent was designed by a lot of experts in different area. You will never worry about the quality and pass rate of our study materials, it has been helped thousands of candidates pass their exam successful and helped them find a good job. If you choose our 200-901 study torrent, we can promise that you will not miss any focus about your exam. There are three different versions to meet customers' needs you can choose the version that is suitable for you to study. If you buy our DevNet Associate Exam test torrent, you will have the opportunity to make good use of your scattered time to learn whether you are at home, in the company, at school, or at a metro station.

Cisco 200-901 Exam is a computer-based test that consists of 120 questions. Candidates have 120 minutes to complete the exam. The questions are in multiple-choice format and cover a wide range of topics. To pass the exam, candidates must score a minimum of 825 out of 1000.

Cisco DevNet Associate Exam Sample Questions (Q425-Q430):

NEW QUESTION # 425

Which QoS Profile is selected in the GUI when configuring a voice over WLAN deployment?

- A. Silver

- B. Bronze
- C. Gold
- D. Platinum

Answer: D

Explanation:

Section: Network Access

Explanation/Reference: <https://www.cisco.com/c/en/us/support/docs/wireless-mobility/wireless-lan-wlan/81831-qos-wlc-lap.html>

NEW QUESTION # 426

Fill in the blanks to complete the python script to request a service ticket using the APIC-EM rest API for the user "devnetuser".

```
import requests
import json
controller = 'devnetapi.cisco.com/sandbox/apic_em'
url = "https://" + controller + "/api/va/ticket"
payload = { 'username': '[redacted]', 'password': '371274739' }
header = { 'Content-type': 'application/json' }
response = [redacted] post(url, data=json.dumps(payload), \
headers=[redacted], verify=False)
r_json = response.json()
print(r_json)
ticket = r_json["response"]["serviceTicket"]
print(ticket)
```

Answer:

Explanation:

Solution as below

```
import requests
import json
controller = 'devnetapi.cisco.com/sandbox/apic_em'
url = "https://" + controller + "/api/va/ticket"
payload = { 'username': 'devnetuser', 'password': '371387657' }
header = { 'Content-type': 'application/json' }
response = requests.post(url, data=json.dumps(payload), \
headers=header, verify=False)
r_json = response.json()
print(r_json)
ticket = r_json["response"]["serviceTicket"]
print(ticket)
```

NEW QUESTION # 427

Which IP service is used to monitor the performance of network devices?

- A. DNS
- B. DHCP
- C. SNMP
- D. NTP

Answer: C

Explanation:

Simple Network Management Protocol (SNMP) is widely used for network management and monitoring. It allows administrators to monitor and manage network devices such as routers, switches, and servers by collecting information on device performance, status, and errors.

* SNMP: Provides a framework for exchanging management information between network devices. It helps in monitoring network performance, detecting faults, and configuring devices remotely.

* Other Protocols:

* DHCP: Used for dynamic IP address assignment.

* DNS: Resolves domain names to IP addresses.

* NTP: Synchronizes time across network devices.

NEW QUESTION # 428

Refer to the exhibit.

```
1 def enable_function(if_name, if_status, if_type):
2     headers = {'Accept': 'application/yang-data+json',
3               'Content-Type': 'application/yang-data+json'}
4     payload = {
5         "ietf-interfaces:interface": {
6             "name": if_name,
7             "enabled": if_status,
8             "type": if_type,
9         }
10    }
11    base_url = 'https://192.168.1.1:8443'
12    restconf_url = '/restconf/data/ietf-interfaces:interfaces/interface'
13
14    res = requests.put(f'{base_url}{restconf_url}={if_name}',
15                      headers=headers, json=payload,
16                      auth=('cisco', 'secret'), verify=False)
```

A network engineer wants to automate the port enable/disable process on specific Cisco switches. The engineer creates a script to send a request through RESTCONF and uses ietf as the YANG model and JSON as payload. Which command enables an interface named Loopback1?

- A. `enable_function(Loopback1, true, 'iana-if-type:softwareLoopback')`
- B. `def enable_function(Loopback1, true, 'iana-if-type:softwareLoopback')`
- C. `enable_function('iana-if-type:softwareLoopback', Loopback1, true,)`
- D. `def enable_function('iana-if-type:softwareLoopback', Loopback1, false,)`

Answer: A

Explanation:

In the provided Python function `enable_function`, the parameters are `if_name`, `if_status`, and `if_type`, which correspond to the interface name, status (enabled/disabled), and interface type respectively.

* Function Parameters: The function `enable_function` is designed to take three parameters: the interface name (`if_name`), the status (`if_status`), and the type (`if_type`).

* Correct Order and Values: To enable the interface named "Loopback1", you need to pass the correct values in the order they are defined in the function.

Option A correctly calls the function with the interface name "Loopback1", the status `true` (enabled), and the interface type `'iana-if-type:softwareLoopback'`.

Cisco DevNet Documentation: RESTCONF and YANG Models

NEW QUESTION # 429

Refer to the exhibit.

HTTP REQUEST

POST /organizations/ {organizationId}/networks

PARAMETERS

name

The name of the new network.

type

The type of the new network. Valid types are wireless, appliance, switch, systemsManager, camera, cellularGateway, or a space-separated list of those for a combined network.

tags

A space-separated list of tags to be applied to the network.

timeZone

The timezone of the network. For a list of allowed timezones, please see the 'TZ' column in the table in [this article](#).

copyFromNetworkId

The ID of the network to copy configuration from. Other provided parameters will override the copied configuration, except type which must match this network's type exactly.

disableMyMerakiCom

Disables the local device status pages ([my.meraki.com](#), [ap.meraki.com](#), [switch.meraki.com](#), [wired.meraki.com](#)). Optional (defaults to false).

disableRemoteStatusPage

Disables access to the device status page ([http://\[device's LAN IP\]](#)). Optional. Can only be set if disableMyMerakiCom is set to false.

```
base_url = https://api.meraki.com/api/v0
org_id = 123456789
api_key = 1098hadpfsiapsf8ahf8ohp
network_name = "New Network"
requests.<item 1> (
    <item 2> + "<item 3>/" + org_id + "/<item 4>",
    headers = {
        "X-Cisco-Meraki-API-Key": "<item 5>",
        "Content-Type": "<item 6>"
    },
    <item 7>=json.dumps ({ "name": <item 8>,
                          "type": "wireless switch"
                          })
)
```

Drag and drop the code from the left onto the item numbers on the right to complete the Meraki python script shown in the exhibit.

base_url	<item 1>
network_name	<item 2>
data	<item 3>
post	<item 4>
application/json	<item 5>
networks	<item 6>
api_key	<item 7>
organizations	<item 8>

Answer:

Explanation:

base_url	post
network_name	base_url
data	organizations
post	networks
application/json	api_key
networks	application/json
api_key	data
organizations	network_name

Explanation

1 - D, 2 - A, 3 - H, 4 - F, 5 - G, 6 - E, 7 - C, 8 - B
