問題 #226

Which categories does the Adoption Advisor use to measure adoption progress for Cloud Security Posture Management?

- A. Foundations, Advanced, and Optimize
- **B. Visibility, Compliance, Governance, and Threat Detection and Response**
- C. Network, Anomaly, and Audit Event
- D. Visibility, Security, and Compliance

答案: B

解題說明:

The Adoption Advisor uses four categories to measure adoption progress for Cloud Security Posture Management: Visibility, Compliance, Governance, and Threat Detection and Response. Visibility helps to identify the resources in the environment and to ensure that security controls are in place. Compliance helps to ensure that the environment is meeting regulatory and industry standards. Governance helps to ensure that the environment is secure and managed according to policy. Threat Detection and Response helps to detect and respond to threats quickly and effectively.

The Adoption Advisor in Prisma Cloud uses categories such as Visibility, Compliance, Governance, and Threat Detection and Response to measure adoption progress for Cloud Security Posture Management (CSPM). These categories represent key areas of focus for effectively managing and securing cloud environments. Visibility refers to the ability to see and understand all cloud resources and their configurations. Compliance involves ensuring that cloud resources comply with regulatory standards and best practices. Governance encompasses the policies and procedures that control cloud resource usage and security. Threat Detection and Response involves identifying and mitigating security threats to the cloud environment. By measuring adoption progress across these categories, organizations can assess how well they are utilizing CSPM capabilities to secure their cloud environments.

問題 #227

Which command should be used in the Prisma Cloud twistcli tool to scan the nginx:latest image for vulnerabilities and compliance issues?

- A)
- B)
- ☐ C)
- ☐ D)

- **A. Option D**
- B. Option C
- C. Option A
- D. Option B

答案: A

解題說明:

The correct command to scan the nginx:latest image for vulnerabilities and compliance issues using the Prisma Cloud twistcli tool is shown in Option D. This command uses twistcli images scan with specified parameters for the console address, username, and password, and it outputs the results to a file named scan- results.json. This allows for the scanning results to be saved and reviewed in a structured format, which aids in further analysis and tracking of vulnerabilities and compliance issues.

問題 #228

Which two bot categories belong to unknown bots under Web-Application and API Security (WAAS) bot protection? (Choose two.)

- A. Search engine crawlers
- B. News bots
- **C. HTTP libraries**
- **D. Web scrapers**

答案: C,D

解題說明:

Under Web-Application and API Security (WAAS) bot protection in Prisma Cloud, unknown bots are categorized based on their behavior and characteristics. Web scrapers and HTTP libraries fall into the category of unknown bots. Web scrapers are automated scripts or programs that extract data from websites, often without permission, while HTTP libraries are tools used for making HTTP requests. Both can be used benignly but may also be employed in malicious activities, hence their classification as unknown bots requiring further analysis.

問題 #229
