BTW, DOWNLOAD part of TestBraindump C_TS470_2412 dumps from Cloud Storage: <https://drive.google.com/open?id=1WOaOzyqnAnzVSzD9j5d450Ax06wOULET>

Now you have all the necessary information about quick SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service (C_TS470_2412) exam questions preparation. Just take the best decision of your career and enroll in the SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service (C_TS470_2412) exam. Download the TestBraindump SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service (C_TS470_2412) exam real dumps now and start this career advancement journey.

SAP C_TS470_2412 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Service Master Data: This section of the exam measures the skills of SAP Master Data Specialists and covers the management and configuration of service-related master data within SAP environments. It includes defining service objects, managing attributes, and ensuring accurate data flow across modules. Effective service master data management helps improve service delivery, optimize resource utilization, and maintain consistency across business processes.
Topic 2	<ul style="list-style-type: none">Organizational Data: This section of the exam measures the skills of Enterprise Data Managers and covers the structuring and management of organizational data within SAP systems. It focuses on defining key organizational elements, configuring data hierarchies, and ensuring proper integration across business units. Mastery of this domain is essential for maintaining accurate reporting structures, workflow efficiency, and compliance with enterprise-wide data governance policies.

Topic 3	<ul style="list-style-type: none"> Managing Clean Core: This section of the exam measures the skills of SAP Solution Architects and covers the principles of maintaining a clean core within SAP systems. It focuses on strategies for minimizing customizations, leveraging standard SAP functionalities, and ensuring system integrity while allowing for necessary extensions. The goal is to enhance system performance, ease upgrades, and maintain long-term sustainability.
Topic 4	<ul style="list-style-type: none"> Service Order Management: This section of the exam measures the skills of SAP Service Operations Consultants and covers the end-to-end management of service orders within SAP. It includes the creation, processing, tracking, and fulfillment of service requests, ensuring seamless coordination between departments. Proper service order management enables organizations to enhance customer satisfaction, streamline operations, and improve response times through integrated workflows.

Test C_TS470_2412 Dumps.zip & C_TS470_2412 Exam Tutorials

We are constantly updating our practice material to ensure that you receive the latest preparation material based on the actual SAP C_TS470_2412 exam content. Up to 1 year of free SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service (C_TS470_2412) exam questions updates are also available at TestBraindump. The TestBraindump offers a money-back guarantee (terms and conditions apply) for students who fail to pass their SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service (C_TS470_2412) exam on the first try.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service Sample Questions (Q58-Q63):

NEW QUESTION # 58

For which objects can you define measuring points? Note: There are 2 correct answers to this question.

- A. Material
- B. **Pieces of equipment**
- C. Serial numbers
- D. Functional locations

Answer: B,D

Explanation:

In SAP S/4HANA Cloud Private Edition, Service, measuring points are used to record quantitative or qualitative data (e.g., temperature, mileage) for technical objects to monitor their condition or performance.

The correct answers are:

- * Functional locations (A): Measuring points can be defined for functional locations to track conditions at specific sites or areas within a plant.
- * Pieces of equipment (C): Measuring points are commonly assigned to equipment to monitor operational parameters, supporting preventive maintenance.
- * Serial numbers (B): Serial numbers identify individual instances of materials but are not technical objects themselves; measuring points are not directly assigned to them.
- * Material (D): Materials represent stock items or products, not technical objects, so measuring points are not applicable.

"Measuring points can be created for functional locations and pieces of equipment to capture measurement data, enabling condition-based maintenance strategies."

NEW QUESTION # 59

When using a configurable service product in the service contract, which condition type is used to reflect the price of the selected configuration?

- A. PSI1 (Price f. Srv. Cntr. Itm)
- B. VASE (Variant Price)
- C. 871 (Service Type (Abs.))

- D. VA00 (Variant Price)

Answer: D

Explanation:

In SAP S/4HANA Cloud Private Edition, Service, a configurable service product in a service contract uses variant configuration to allow customization (e.g., selecting specific service options). The pricing for the selected configuration is reflected using the condition type VA00 (Variant Price)(Option B).

VA00 is a standard condition type in SAP's pricing framework that adjusts the base price based on the chosen configuration variants. It is linked to the variant configuration profile and updates the contract item price dynamically.

* VASE (A):This is not a standard SAP condition type; it seems to be a typo or misinterpretation.

* 871 (C):This is not a recognized condition type for configurable products in service contracts.

* PSI1 (D):This might relate to service contract items but is not specific to configurable product pricing.

"The condition type VA00 (Variant Price) is used in service contracts with configurable products to reflect the price adjustments based on the selected configuration."

NEW QUESTION # 60

In a maintenance plan, what is used to determine the items in a call object?

- A. A product proposal
- B. A service order template
- C. A bill of material
- D. A product bundle

Answer: C

Explanation:

In a maintenance plan, a call object(e.g., a service order) is generated based on scheduling. The items in this call object-such as spare parts or services-are determined by a bill of material (BOM)(Option D).

A BOM with usage type "4" (Plant Maintenance) or "S" (S4 Service) defines the components (materials or services) required for the maintenance task. When the maintenance plan triggers a call, the system references the BOM assigned to the technical object (e.g., equipment or functional location) or task list to populate the call object's items.

* Product bundle (A):Used for grouping products, not for maintenance plan items.

* Service order template (B):Defines a structure for service orders but is not linked to maintenance plan scheduling.

* Product proposal (C):Suggests items based on rules, not a source for call object items.

"The items in a call object generated by a maintenance plan are determined by the bill of material assigned to the technical object or task list, specifying required components."

NEW QUESTION # 61

In the advanced execution scenario, which order types can you map to a service order type?

- A. Sales order types
- B. Customer service order types
- C. Purchase order types
- D. Maintenance order types

Answer: D

Explanation:

The Service with Advanced Execution scenario in SAP S/4HANA Cloud Private Edition, introduced fully in release 2023, integrates service orders with detailed operational planning via maintenance orders. In this scenario:

* Maintenance order types: These can be mapped to a service order type to enable advanced execution capabilities, such as detailed planning of operations, spare parts, and task lists. This mapping is configured in Customizing under "Plant Maintenance Integration # Map Order Types," allowing a service order item to generate a corresponding maintenance order.

* Purchase order types: These are used for procurement, not directly mapped to service orders in this context.

* Customer service order types: This is not a distinct order type category in SAP S/4HANA Service; service orders themselves are the focus.

* Sales order types: These are unrelated to the advanced execution scenario, which focuses on service and maintenance integration. This integration enhances planning and execution for complex or long- running services."Map the transaction type and

item category used in a maintenance service to a maintenance order type to enable creation of a maintenance order in the Service with Advanced Execution scenario." (SAP Help Portal, Configuring Service with Advanced Execution).

NEW QUESTION # 62

What are steps included in the planning and execution of a recurring inspection? Note: There are 2 correct answers to this question.

- A. A service order is automatically generated by scheduling the maintenance plan for the inspection.
- B. A service order is automatically generated when activating the maintenance plan for the inspection.
- C. When accepting a service order quotation, the system automatically creates a maintenance plan.
- D. A completion marks a service order and its corresponding planned date in the maintenance plan as finished.

Answer: A,D

Explanation:

Are recurring inspection in SAP S/4HANA Cloud Private Edition, Service uses a maintenance plan to schedule periodic checks. The correct steps are A and B. Let's explore this in detail.

Recurring Inspection Overview:

This process involves scheduling inspections via a maintenance plan, generating service orders, and completing them to update the plan.

* A completion marks a service order and its corresponding planned date in the maintenance plan as finished (A): When a service order (the call object) is completed (e.g., status "Technically Completed"), the system updates the maintenance plan, marking the corresponding planned date as finished. This shifts the scheduling to the next cycle (e.g., via transaction IP10).

* A service order is automatically generated by scheduling the maintenance plan for the inspection (B): Scheduling the maintenance plan (e.g., via IP10 or a background job) generates a service order based on the plan's cycle and call horizon. This order contains the inspection tasks.

Why Not the Others?

* C: Accepting a quotation creates a contract or order, not a maintenance plan, which is a separate planning object.

* D: Activating a maintenance plan sets it up but doesn't generate orders; scheduling does that.

Detailed Flow:

- * Maintenance plan created with inspection cycle (e.g., every 6 months).
- * Scheduling (IP10) generates a service order when the call date is reached.
- * Order completed # Plan updated, next call scheduled.

"Recurring inspections involve scheduling a maintenance plan to automatically generate service orders, with completion updating the plan's planned dates."

NEW QUESTION # 63

.....

To attain all these you just need to enroll in the SAP C_TS470_2412 certification exam and put in all your efforts and prepare well to crack the SAP C_TS470_2412 exam easily. For the perfect and instant SAP C_TS470_2412 preparation, you can get help from SAP C_TS470_2412 Questions. The TestBraindump C_TS470_2412 exam questions are real and will entirely assist you in C_TS470_2412 exam preparation and you can easily pass the final SAP C_TS470_2412 certification exam.
