Certs Exam HP - HPE7-A07

Question #1

You deployed UBT to securely tunnel traffic from user desktop PCs connected behind VoIP phones. All other non-UBT clients are connected to a different network. After the deployment, users reported interruptions to their phone service.

- A. The VLAN on which UBT clients are placed is not configured on the switch uplink and traffic from the VoIP phones is being dropped.
- B. You failed to correctly configure a user-defined VRF to support the UBT clients behind the VoIP phones, causing traffic to drop.
- C. Broadcast/multicast packets are copied to both the tunnel and locally, causing duplicate packets and network instability.
- D. The UBT client broadcast/multicast packets returned to the same switch port and corrupted the phone's IMC table.

Answer: A

Explanation

If users report interruptions to their phone service after the deployment of User-Based Tunneling (UBT), it can be due to the VLAN designated for UBT clients not being configured on the switch uplink. As a result, traffic from VoIP phones, which may be trying to use the same VLAN, could be dropped, leading to service interruptions. Ensuring that the VLAN is properly configured on the switch uplink is crucial for the seamless operation of UBT clients and VoIP services.

Question #2

Which statements accurately describe OSPF Graceful Restart (when the restarting router is able to keep its forwarding tables across the restart)? (Select two.)

- A. The GR helper role is supported on AOS-CX 6100 switches.
- B. VSF Failover and Graceful-Restart require a VSF secondary member in the VSF stack.
- C. Bidirectional Forwarding Detection for OSPF and GR are mutually exclusive features.
- D. OSPF Routers listen for Grace-LSAs on each network segment where there is an OSPF adjacency.
- E. You must ensure your VSF stack has a secondary member when acting as a GR helper.

Answer: A, D

Explanation

Graceful Restart (GR) allows a router to continue forwarding packets while it restarts its OSPF process. The GR helper role on AOS-CX switches supports routers during this process. OSPF routers listen for Grace-LSAs to identify neighbors undergoing a graceful restart, maintaining adjacencies with those routers to allow
