

# 2025 Accurate 1Z0-1151-25: Oracle Cloud Infrastructure 2025 Multicloud Architect Professional Guaranteed Questions Answers

What's more, part of that PDFBraindumps 1Z0-1151-25 dumps now are free: [https://drive.google.com/open?id=16Lxwa5EYdludr37KFx\\_LB5xfkDFugqw2](https://drive.google.com/open?id=16Lxwa5EYdludr37KFx_LB5xfkDFugqw2)

If you are not sure whether our 1Z0-1151-25 exam braindumps are suitable for you, you can request to use our trial version. Of course, 1Z0-1151-25 learning materials produced several versions of the product to meet the requirements of different users. You can also ask to try more than one version and choose the one that suits you best. And we have three different versions Of our 1Z0-1151-25 Study Guide: the PDF, the Software and the APP online.

Now we can say that with the 1Z0-1151-25 Exam Dumps you will get the updated and verified Oracle 1Z0-1151-25 exam practice Test all the time. With the Oracle Cloud Infrastructure 2025 Multicloud Architect Professional 1Z0-1151-25 Exam Questions, you will get the opportunity to download the updated and real Oracle Cloud Infrastructure 2025 Multicloud Architect Professional 1Z0-1151-25 exam practice questions.

>> 1Z0-1151-25 Guaranteed Questions Answers <<

## Certification 1Z0-1151-25 Questions, 1Z0-1151-25 Certification Dump

If you are preparing for 1Z0-1151-25 exam and upset without accurate exam torrent and practice materials, PDFBraindumps guarantees you to pass exam at first attempt absolutely. Our 1Z0-1151-25 exam torrent is edited by latest official examination knowledge. Once official department change questions we will release new version of 1Z0-1151-25 Exam Torrent accordingly. We provide one year free update and service warranty for all products. You will have sufficient time to take part in exams.

## Oracle 1Z0-1151-25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• <b>Configure Multicloud Connection Options:</b> This section assesses the abilities of Network Engineers in configuring connectivity solutions for OCI multi-cloud environments. It includes setting up secure networking options such as Site-to-Site VPN and FastConnect for seamless cloud integration. Candidates will also learn how to implement Oracle Interconnect services for establishing direct, high-performance connections between OCI and third-party cloud providers like Microsoft Azure and Google Cloud.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• <b>Introduction to Multicloud:</b> This section of the exam measures the skills of Cloud Architects in understanding multicloud environments and their benefits. It covers the reasons organizations adopt multi-cloud strategies, including flexibility, cost optimization, and risk management. Candidates will learn about common multicloud use cases and how they are implemented in Oracle Cloud Infrastructure (OCI) to enhance interoperability and performance.</li></ul>

Topic 3	<ul style="list-style-type: none"> <li>• <b>Core OCI Services Overview:</b> This section evaluates the knowledge of Identity and Database Administrators in managing OCI's core services for multi-cloud integration. It covers the implementation of identity federation between OCI Identity Domains and external identity providers, ensuring secure authentication across multiple cloud environments. Candidates will also gain expertise in configuring Virtual Cloud Network (VCN) components and administering OCI database services, including Base Databases, Autonomous Databases, and HeatWave, to support scalable multi-cloud deployments.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>Implement Oracle Database@Google Cloud:</b> This section measures the proficiency of Cloud Database Engineers in utilizing Oracle Database@Google Cloud. It explores the architecture and operational framework for running Oracle databases on Google Cloud. Candidates will learn about onboarding procedures, provisioning resources, and managing database services effectively to optimize performance and availability in a Google Cloud-integrated multi-cloud ecosystem.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• <b>Implement Oracle Database@Azure:</b> This section tests the expertise of Database Solutions Architects in deploying and managing Oracle Database@Azure. It covers the architectural components and onboarding processes required for provisioning databases in Azure while maintaining Oracle's advanced database capabilities. Candidates will also focus on configuring high availability and disaster recovery strategies to ensure business continuity and data resilience in a multi-cloud setup.</li> </ul>

## Oracle Cloud Infrastructure 2025 Multicloud Architect Professional Sample Questions (Q39-Q44):

### NEW QUESTION # 39

In the context of Oracle Database@Azure, how is an Oracle Data Guard standby database typically provisioned when implementing cross-region disaster recovery?

- A. It requires a separate Exadata Infrastructure and VM Cluster to be provisioned in the target Azure region, and then configured for database sync.
- B. It is automatically created by the Oracle Database@Azure service as part of the initial configuration in the OCI console.
- C. It's configured by leveraging native Azure Database services.
- D. It is replicated through Azure Site Recovery

**Answer: A**

Explanation:

While the choice has a slight inaccuracy (it should say OCI region not Azure region), it's the closest to the correct process. Here's a breakdown:

**Separate Infrastructure:** You need a separate Exadata Infrastructure resource in the target OCI region where the standby will reside. This means provisioning the physical Exadata hardware in that region.

**Separate VM Cluster:** On top of that infrastructure, you need to create an Exadata VM Cluster in that target OCI region. This is where the standby database software will be installed.

**Data Guard Configuration:** Finally, you configure Oracle Data Guard to establish the replication between the primary database (in the original OCI region linked to Azure) and the standby database (in the target OCI region).

The other options are incorrect:

It is not automatically created by the Oracle Database@Azure service. Manual provisioning and configuration are required.

Azure Site Recovery is an Azure service for replicating VMs, but Oracle databases on Exadata are not VMs in the Azure sense.

Native Azure Database services are not used for Oracle databases in this context.

### NEW QUESTION # 40

Which is not a driver for using multiple clouds?

- A. Best of Breed Cloud Services
- B. Redundancy/Disaster Recovery
- C. Cost Optimization
- D. Content Delivery Network

**Answer: D**

Explanation:

Drivers for adopting multicloud architectures typically include redundancy/disaster recovery (ensuring availability across providers), best-of-breed cloud services (leveraging specialized offerings), and cost optimization (balancing expenses across clouds). A Content Delivery Network (CDN) is a specific service for distributing content globally, often provided by cloud vendors, but it is not a strategic driver for adopting a multicloud approach. CDNs can be used within a single cloud or multicloud setup, but they don't inherently motivate the decision to use multiple clouds. Oracle's multicloud strategy documentation highlights the other three as primary motivations.

#### NEW QUESTION # 41

What is a key benefit of using Oracle Autonomous Database on Shared Exadata Infrastructure?

- **A. Automatic database tuning and patching**
- B. Unlimited storage capacity
- C. Seamless integration with third-party cloud providers
- D. Enhanced physical security of hardware

**Answer: A**

Explanation:

A primary benefit of Oracle Autonomous Database on Shared Exadata Infrastructure is its ability to automatically tune and patch the database, reducing manual administration and improving performance and security. Option B is unrelated to the shared infrastructure model, Option C exaggerates storage (it's scalable, not unlimited), and Option D is a general infrastructure feature, not specific to Autonomous Database. Oracle's documentation highlights automation as a core advantage.

#### NEW QUESTION # 42

A company XYZ has been using Oracle Cloud Infrastructure to host their mission-critical applications, but they have decided to start using Azure for some of their workloads. They want to enable connectivity between their Oracle Cloud Infrastructure and Microsoft Azure to create a multicloud architecture.

- A. None of the above.
- B. Use public Internet to connect the two clouds.
- **C. Use OCI-Azure Interconnect to establish a private, high-bandwidth, low-latency connection between the two clouds.**
- D. Use a VPN connection to connect the two clouds.

**Answer: C**

Explanation:

The OCI-Azure Interconnect is the official Oracle-Microsoft partnership solution for establishing a private, high-bandwidth, and low-latency connection between OCI and Azure. This interconnect leverages Azure ExpressRoute and Oracle FastConnect to create a dedicated network link, bypassing the public internet for enhanced security and performance. A VPN connection (Option A) is possible but less optimal due to higher latency and lower reliability compared to the interconnect. Using the public internet (Option B) is insecure and unsuitable for mission-critical applications. This solution is detailed in Oracle's multicloud architecture guides and the OCI-Azure partnership documentation, emphasizing its suitability for enterprise multicloud deployments.

#### NEW QUESTION # 43

When setting up Oracle Interconnect for Google Cloud, which critical resource needs to be created in the Google Cloud environment?

- A. Cross-Cloud Interconnect VLAN attachment
- **B. Partner Interconnect VLAN attachment**
- C. Google Cloud NAT gateway
- D. Shared VPC with OCI

**Answer: B**

Explanation:

When setting up Oracle Interconnect for Google Cloud, you're essentially establishing a connection between your Virtual Private Cloud (VPC) network in Google Cloud and your Virtual Cloud Network (VCN) in OCI. This is achieved through a Partner

Interconnect VLAN attachment on the Google Cloud side.

Here's a breakdown:

Partner Interconnect: This Google Cloud service allows you to connect your on-premises network or, in this case, another cloud provider (OCI) to your VPC network through a supported service provider (a "partner").

VLAN attachment: This is a logical connection between your VPC network and the Partner Interconnect. It's the specific resource that carries the traffic between Google Cloud and OCI.

Why the other options are incorrect:

- a). Cross-Cloud Interconnect VLAN attachment: While this sounds similar, Cross-Cloud Interconnect is for direct connections between Google Cloud and other cloud providers, not through a partner. Oracle Interconnect for Google Cloud uses the Partner Interconnect model.
- c). Google Cloud NAT gateway: A NAT gateway is used for providing internet access to resources within a private subnet. While it might be used in conjunction with the interconnect for certain scenarios, it's not the critical resource for establishing the interconnect itself.
- d). Shared VPC with OCI: Shared VPC is a Google Cloud feature that allows multiple projects to share a common VPC network. It's not directly involved in setting up the physical or logical connection between Google Cloud and OCI

## NEW QUESTION # 44

.....

The Oracle Cloud Infrastructure 2025 Multicloud Architect Professional 1Z0-1151-25 certification provides both novices and experts with a fantastic opportunity to show off their knowledge of and proficiency in carrying out a particular task. With the Oracle 1Z0-1151-25 exam, you will have the chance to update your knowledge while obtaining dependable evidence of your proficiency. You can also get help from actual Oracle Cloud Infrastructure 2025 Multicloud Architect Professional 1Z0-1151-25 Exam Questions and pass your dream Oracle Cloud Infrastructure 2025 Multicloud Architect Professional 1Z0-1151-25 certification exam.
