Exam CPIM-8.0 Labs & Valid CPIM-8.0 Exam Question

While attempting the exam, take heed of the clock ticking, so that you manage the APICS CPIM-8.0 Questions in a time-efficient way. Even if you are completely sure of the correct answer to a question, first eliminate the incorrect ones, so that you may prevent blunders due to human error.

APICS CPIM-8.0 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Supply: This module tests the competencies of Procurement Specialists in managing supply chains effectively. It involves creating master schedules for production planning, maintaining these schedules over time, material requirements planning (MRP), capacity requirements planning (CRP), supplier management practices, and purchasing strategies during product life cycle changes. A key skill measured here is "validating master schedules."

Topic 2	<ul style="list-style-type: none"> • Quality, Technology, and Continuous Improvement: This section assesses skills of Quality Assurance Specialists, focusing on quality assurance methodologies enhanced by technology to drive continuous improvement efforts. A key skill measured here is "enhancing quality metrics."
Topic 3	<ul style="list-style-type: none"> • Detailed Schedules: This section assesses the skills of Production Planners by focusing on detailed scheduling processes for production or service delivery environments. It includes methods like PAC (Programmable Automation Controller) scheduling techniques to manage detailed production timelines efficiently across different materials required for manufacturing or service delivery processes.
Topic 4	<ul style="list-style-type: none"> • Inventory: The inventory module evaluates the skills of Inventory Controllers, covering inventory planning principles such as determining optimal stock levels based on costs versus benefits analysis metrics like ABC classification systems used globally today along with itemized inventory control mechanisms ensuring efficient stock turnover rates while minimizing holding costs. Distribution: This section measures the abilities of Logistics Coordinators, focusing on distribution network design principles that optimize replenishment orders efficiently while considering reverse logistics practices aimed at reducing waste through proper disposal methods according to environmental regulations.
Topic 5	<ul style="list-style-type: none"> • Demand: This section evaluates the abilities of Demand Analysts in managing demand through forecasting techniques. It explores sources of demand data for accurate forecasting and evaluating forecast performance to improve future predictions. One important skill evaluated is "forecasting demand accurately."

APICS Certified in Planning and Inventory Management (CPIM 8.0) Sample Questions (Q116-Q121):

NEW QUESTION # 116

During the initiation phase of a project to acquire a customer relation management system, what is the FIRST step a project team will take for early integration of security?

- A. Review relevant regulatory practices and standards.
- B. Conduct project planning and a feasibility assessment.
- C. Define system security classifications.
- D. Develop a list of security requirements for the system.

Answer: A

NEW QUESTION # 117

A company's primary performance objective is flexibility. Which of the following measurements is most important?

- A. Labor productivity
- B. Machine changeover time
- C. Cycle time
- D. Schedule adherence

Answer: B

Explanation:

Flexibility is the ability of a process or system to adapt to changes in customer demand, product mix, or production volume. A flexible process can respond quickly and efficiently to these changes, minimizing disruptions and costs. One of the key measurements of flexibility is machine changeover time, which is the time required to switch a machine or equipment from producing one type of product to another. A shorter machine changeover time means a higher level of flexibility, as the process can accommodate different products or orders without wasting time or resources. This aligns with CPIM's focus on plan, manage, and execute detailed schedules and manage quality, continuous improvement, and technology. References: The concepts are covered in detail in Module 5: Detailed Scheduling and Planning (1 and Module 6: Quality, Continuous Improvement, and Technology (2. You can also find more information about flexibility and machine changeover time from these sources: 3, 4, and 5.

NEW QUESTION # 118

Which of the following factors is considered a carrying cost?

- **A. Obsolescence**
- B. Transportation
- C. Scrap rate
- D. Setup

Answer: A

Explanation:

Carrying cost is the total cost of holding and storing inventory. It includes various expenses such as storage, insurance, taxes, depreciation, and obsolescence. Obsolescence is the loss of value or usefulness of inventory due to changes in technology, customer preferences, or market conditions. Obsolescence is considered a carrying cost because it reduces the potential revenue that can be generated from selling the inventory. Setup, transportation, and scrap rate are not carrying costs, but rather order costs, logistics costs, and quality costs respectively. Reference: CPIM Part 1 - Section A: Introduction to Supply Chain Management - Module 1: Basics of Supply Chain Management - Session 1.4: Inventory - Inventory Costs. CPIM Part 1 Study Guide, pp. 1-32 - 1-33.

NEW QUESTION # 119
