Reliable 1Z0-771 Study Plan, Latest 1Z0-771 Test Camp

Oracle 1Z0-771 actual test question is a good choice. The Oracle 1Z0-771 PDF is the most convenient format to go through all exam questions easily. It is a compilation of actual Oracle 1Z0-771 exam questions and answers. The PDF is also printable so you can conveniently have a hard copy of Oracle 1Z0-771 Dumps with you on occasions when you have spare time for quick revision. The PDF is easily downloadable from our website and also has a free demo version available.

Oracle 1Z0-771 Exam Syllabus Topics:

Topic	Details
Topic 1	Managing Pages and Regions: This section measures the knowledge of UI Designers in structuring application layouts. It covers creating different types of pages and regions, managing page components within Page Designer, and ensuring an optimized user interface for applications.

Topic 2	Developing Reports: This section assesses the skills of Report Developers in creating interactive reports and dashboards. It involves customizing reports, working with faceted search pages, integrating smart filters, and designing visually appealing data presentations using Oracle APEX.
Topic 3	Implementing Security in Your Application: This section evaluates the knowledge of Security Specialists in securing APEX applications. It covers authentication schemes, authorization controls, and session state protection to ensure application security and user access management.
Topic 4	Creating Progressive Web Apps: This section assesses the skills of Web Developers in building Progressive Web Applications (PWAs). It includes enhancing application accessibility, implementing push notifications, and optimizing applications for seamless cross-device experiences.
Topic 5	Managing Application Data: This section evaluates the expertise of Data Engineers in handling application data. It covers using collections, managing REST-enabled SQL references, integrating REST Data Sources, and synchronizing data across different environments.
Topic 6	Using Themes and Theme Styles: This section tests the abilities of UI Designers in applying visual themes to applications. It involves selecting and customizing themes, using Theme Roller for design adjustments, and creating template components for consistent branding.
Topic 7	Migrating Application Development Between Environments: This section measures the abilities of DevOps Engineers in managing application deployments. It includes exporting and importing application artifacts, performing remote deployments, and maintaining working copies to ensure smooth transitions between development environments.
Topic 8	Creating and Using Dynamic Actions and Plug-ins: This section tests the expertise of Developers in implementing dynamic actions. It covers configuring event-driven behaviors and integrating plug-ins to create responsive and interactive application features.
Topic 9	Getting Started with Oracle APEX on the Oracle Autonomous Database: This section of the exam measures the skills of APEX Developers in understanding Oracle APEX and its core components. It covers the creation and management of workspaces, providing an overview of how APEX integrates with the Oracle Autonomous Database to streamline application development.

Oracle APEX Cloud Developer Professional Sample Questions (Q32-Q37):

NEW QUESTION # 32

You have defined a REST Data Source with ORDS as the REST Data Source Type. The Source is being used as source for an editable Interactive Grid. When a user updates an employee record in this Interactive Grid, which operation is performed on the Database?

- A. POST
- B. PUT
- C. GET

Answer: B

Explanation:

An editable Interactive Grid synced with a REST Data Source (ORDS) maps CRUD operations to HTTP methods:

C . PUT: Updates an existing resource. When a user edits a row (e.g., changes SALARY), the grid sends a PUT request to the ORDS endpoint (e.g., /employees/101), updating the corresponding record.

A . POST: Creates new records, used for inserts, not updates.

B . GET: Retrieves data, used for initial grid population, not updates.

Technical note: ORDS maps PUT to an update operation on the underlying table, requiring the REST endpoint to support this method.

NEW QUESTION # 33

The Movies faceted search report is filtered only when the Apply button for a selected facet is clicked. What must be done in the Page Designer so that report filtering is automatically executed when any facet value is selected?

- A. Navigate to the faceted search region Attributes, and turn off the Show Facet Name attribute.
- B. Navigate to each facet and then in the Property Editor, turn on Client-Side Filtering.
- **C. Navigate to the faceted search region Attributes, and disable the Batch Facet Changes attribute.**

Answer: C

Explanation:

By default, faceted search can "batch" changes, requiring an "Apply" button click to filter the report. To enable automatic filtering: Disable the Batch Facet Changes attribute: In Page Designer, under the Faceted Search region's Attributes, setting "Batch Facet Changes" to "No" ensures the report refreshes immediately when a facet value is selected, improving responsiveness. This triggers an AJAX call to update the report without a manual submit.

Show Facet Name: This controls facet label visibility, unrelated to filtering behavior.

Client-Side Filtering: This applies to Interactive Reports/Grids, not faceted search regions, and isn't the correct solution here. This adjustment enhances the user experience by providing instant feedback.

NEW QUESTION # 34

Which two statements are true about the APEX_MAIL API?

- **A. You can send emails using the APEX_MAIL package from an Oracle APEX application.**
- B. You can receive emails using the APEX_MAIL package in an Oracle APEX application.
- C. The APEX_MAIL package supports sending emails only to Oracle database users.
- **D. You can add files as attachments to your emails using the APEX_MAIL package.**

Answer: A,D

Explanation:

The APEX_MAIL API facilitates email functionality:

A . You can add files as attachments: Using APEX_MAIL.ADD_ATTACHMENT (e.g.,

APEX_MAIL.ADD_ATTACHMENT(p_mail_id, p_attachment, p_filename)), you can attach BLOBs (e.g., PDFs) to emails.

C . You can send emails: APEX_MAIL.SEND (e.g., APEX_MAIL.SEND(p_to => 'user@example.com', p_body => 'Hello')) sends emails from APEX, leveraging the configured mail server.

B . You can receive emails: False; APEX_MAIL is send-only; receiving requires custom integration (e.g., IMAP).

D . Only to Oracle database users: False; emails can go to any valid address, not just database users.

Pitfall: Ensure the mail queue is processed (APEX_MAIL.PUSH_QUEUE) for timely delivery.

NEW QUESTION # 35

An application includes a form on the EMPLOYEES table. You must limit the P1_MANAGER page item so users can select a single employee name and ID from the corresponding manager ID in the same table. Which item type can be used to display P1_MANAGER?

- A. Switch
- B. Checkbox
- **C. Popup LOV**

Answer: C

Explanation:

The requirement is to allow users to pick a single employee (name and ID) from a list tied to the MANAGER_ID column in the EMPLOYEES table, implying a dynamic, searchable selection:

A . Popup LOV: This item type displays a popup window with a searchable list of values, sourced from a SQL query (e.g., SELECT ename, empno FROM employees WHERE empno IN (SELECT DISTINCT manager_id FROM employees)). It returns a single value (e.g., EMPNO) while displaying the name, perfectly meeting the need for a single selection from a related dataset.

B . Switch: A toggle (Yes/No), unsuitable for selecting from a list of employees.

C . Checkbox: Allows multiple selections, conflicting with the "single employee" requirement.

Practical note: Popup LOVs enhance usability with filtering and pagination, ideal for large employee lists, and support returning the

ID while showing the name.

NEW QUESTION # 36

The Movies faceted search report is filtered only when the Apply button for a selected facet is clicked. What must be done in the Page Designer so that report filtering is automatically executed when any facet value is selected?

- A. Navigate to the faceted search region Attributes, and turn off the Show Facet Name attribute.
- B. Navigate to each facet and then in the Property Editor, turn on Client-Side Filtering
- C. Navigate to the faceted search region Attributes, and disable the Batch Facet Changes attribute.

Answer: C

Explanation:

By default, faceted search can "batch" changes, requiring an "Apply" button click to filter the report. To enable automatic filtering: Disable the Batch Facet Changes attribute: In Page Designer, under the Faceted Search region's Attributes, setting "Batch Facet Changes" to "No" ensures the report refreshes immediately when a facet value is selected, improving responsiveness. This triggers an AJAX call to update the report without a manual submit.

Show Facet Name: This controls facet label visibility, unrelated to filtering behavior.

Client-Side Filtering: This applies to Interactive Reports/Grids, not faceted search regions, and isn't the correct solution here. This adjustment enhances the user experience by providing instant feedback.
