EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q32-Q37):

NEW QUESTION # 32

Question:

A company wants to perform a full backup of its critical data. What is the main advantage of this approach?

- A. It requires minimal storage space.
- **B. It provides the fastest data recovery.**
- C. It minimizes the impact on production systems.
- D. It is the fastest backup method.

Answer: B

Explanation:

A full backup captures all data each time it runs.

* Main advantage: Fastest recovery because no additional backup sets (like incrementals or differentials) need to be combined.

* Disadvantage: Takes more backup time and requires more storage space compared to incremental backups.

* Option B: Full backups have a higher impact because of the time and bandwidth required.

* Option C: Full backups consume the most storage.

* Option D: Full backups are not the fastest in terms of backup window - they are the fastest in recovery.

NEW QUESTION # 33

Question:

What is a key benefit for deploying a remote data protection and recovery solution in a data center environment?

- A. Reduces the cost of protecting data
- B. Reduces required maintenance time for IT resources
- C. Maximizes application and information availability
- D. Avoids security risks that expose business data

Answer: C

Explanation:

Remote data protection and recovery solutions, like replication and cloud-based backup, are primarily designed to ensure maximum application and information availability. They protect data in the event of:

* Local failures (disk, server, or site outages)

* Natural disasters (floods, fires)

* Ransomware attacks

By having off-site copies and failover options, businesses maintain continuous access to critical data.

NEW QUESTION # 34

Question:

An IT team needs to connect a compute system to a switch in their SAN. What is the port type?

- A. G_port
- B. N_port
- C. E_Port
- D. F_port

Answer: D

Explanation:

An F_port (Fabric port) is used on a Fibre Channel switch to connect N_ports (Node ports) on end devices like servers and storage arrays.

* N_port: On the compute system (HBA).

* F_port: On the switch, accepting N_port connections.

* E_port: For switch-to-switch ISL (Inter-Switch Link) connections.

* G_port: A generic port that can operate as either an F_port or an E_port (not the direct answer in this scenario).

NEW QUESTION # 35

Question:

What is a key challenge in managing the variety aspects of Big Data?

- A. Storing transaction-based data over the years
- B. Generating real-time data
- C. Reducing data volume to manageable sizes

- **D. Combining data from various sources and formats cost-effectively**

Answer: D

Explanation:

Big Data's "variety" refers to the challenge of integrating different data types (structured, semi-structured, unstructured) from various sources.

The key challenge is to combine and manage this data cost-effectively, ensuring analytics systems can process it seamlessly.

- * Generating real-time data is about velocity, not variety.
- * Storing data over years is about volume.
- * Reducing volume is more about data management, not variety.

Reference: Dell Information Storage and Management Foundations 2023 Study Guide, Section: Big Data Characteristics.

NEW QUESTION # 36

Question:

A company is experiencing a sudden surge in website traffic due to a successful marketing campaign. The company's IT infrastructure is struggling to cope with the increased demand, and the website is slowing down.

Which cloud computing characteristic would be beneficial in this situation?

- **A. Rapid elasticity**
- B. Resource pooling
- C. Measured service
- D. On-demand self-service

Answer: A

Explanation:

Rapid elasticity is a cloud computing characteristic that allows resources to be scaled up or down quickly and automatically, depending on demand. In the scenario of a sudden traffic surge, rapid elasticity enables the infrastructure to handle increased loads without manual intervention.

- * Measured service: Refers to monitoring and billing based on resource usage.
- * On-demand self-service: Allows users to provision resources as needed.
- * Resource pooling: Involves sharing resources among multiple users.
