Exam SK0-005 Overview | SK0-005 Brain Exam

Passing an exam for most candidates may be not very easy, our SK0-005 Exam Materials are trying to make the make the difficult things become easier. With the experienced experts to revise the SK0-005 exam dump, and the professionals to check timely, the versions update is quietly fast. Thinking that if you got the certificate, you can get a higher salary, and you're your position in the company will also in a higher level.

CompTIA Server+ Certification Exam Sample Questions (Q386-Q391):

NEW QUESTION # 386

An administrator has been troubleshooting a server issue. The administrator carefully questioned the users and examined the available logs. Using this information, the administrator was able to rule out several possible causes and develop a theory as to what the issue might be. Through further testing, the administrator's theory proved to be correct. Which of the following should be the next step to troubleshoot the issue?

- A. Document the findings and actions.
- **B. Establish an action plan.**
- C. Implement the solution.
- D. Escalate the issue to the management team.

Answer: B

Explanation:

The next step to troubleshoot the issue after developing and testing a theory is to establish an action plan. This involves identifying the steps needed to implement the solution, estimating the time and resources required, and evaluating the potential risks and impacts of the solution. Documenting the findings and actions, escalating the issue to the management team, or implementing the solution are steps that should be done after establishing an action plan. NEW QUESTION # 387

A server administrator implemented a new backup solution and needs to configure backup methods for remote sites. These remote sites have low bandwidth and backups must not interfere with the network during normal business hours. Which of the following methods can be used to meet these requirements? (Select two).

- A. Archive
- B. Cloud
- C. Differential
- D. Open file
- E. Synthetic full
- F. Snapshot

Answer: A,C

Explanation:

Archive is a method of storing historical data that is not frequently accessed or modified. Archive can reduce the amount of data that needs to be backed up and save bandwidth and storage space. Differential is a method of backing up only the data that has changed since the last full backup. Differential can also save bandwidth and storage space, as well as speed up the backup process.

NEW QUESTION # 388

Which of the following BEST measures how much downtime an organization can tolerate during an unplanned outage?

- A. SLA
- B. MTTR
- C. BIA
- D. RTO

Answer: D

Explanation:

Explanation

RTO (Recovery Time Objective) is a measure of how much downtime an organization can tolerate during an unplanned outage. It is the maximum time allowed for restoring normal operations after a disaster. RTO is one of the key metrics for disaster recovery planning and testing. SLA (Service Level Agreement) is a contract that defines the expected level of service and performance between a provider and a customer. BIA (Business Impact Analysis) is a process that identifies and evaluates the potential effects of a disaster on critical business functions and processes. MTTR (Mean Time To Repair) is a measure of how long it takes to fix a failed component or system. References: <https://parachute.cloud/rto-vs-rpo/>

NEW QUESTION # 389

A user cannot save large files to a directory on a Linux server that was accepting smaller files a few minutes ago. Which of the following commands should a technician use to identify the issue?

- A. pvdisplay
- B. fdisk -l
- C. mount

- D. df-h

Answer: D

Explanation:

Explanation

The df -h command should be used to identify the issue of not being able to save large files to a directory on a Linux server. The df -h command displays disk space usage in human-readable format for all mounted file systems on the server. It shows the total size, used space, available space, percentage of use, and mount point of each file system. By using this command, a technician can check if there is enough free space on the file system where the directory is located or if it has reached its capacity limit.

NEW QUESTION # 390

An administrator receives an alert that one of the virtual servers has suddenly crashed. The administrator confirms the data center does not have any power failures and then connects to the remote console of the crashed server. After connecting to the server console, which of the following should the administrator complete first?

- A. Use the keyboard command AH+F12 to switch to the kernel log screen
- B. Perform a hard reboot on the server and monitor the server startup
- C. Collect a core dump from the server and store locally before rebooting the hardware
- D. Collect a screenshot of the PSOD and note the details after the line detailing the OS version

Answer: D

Explanation:

When a virtual server crashes and presents a Purple Screen of Death (PSOD), the immediate response should be to document the incident. Collecting a screenshot of the PSOD is crucial as it contains error codes and state information that can be used for diagnosing the root cause of the crash. Noting the details, especially those that come after the line detailing the OS version, can provide specific clues to what might have caused the server to crash. This is a standard best practice before rebooting the server, as it ensures that there is a record of the event to investigate and potentially prevent future occurrences. A hard reboot should only be done after this critical information has been recorded.

NEW QUESTION # 391

.....

We hold coherent direction with our exam candidates, so our SK0-005 study materials are compiled in modern format. Many competitors simulate and strive to emulate our standard, but our SK0-005 training braindumps outstrip others in many aspects, so it is incumbent on us to offer help. Considering the current plea of our exam candidates we make up our mind to fight for your satisfaction and wish to pass the SK0-005 Exam.
